Matlamat Dasar Kebangsaan

10
MATLAMAT
DASAR
KEBANGSAAN
BAGI KOMUNIKASI
DAN MULTIMEDIA
DI MALAYSIA

- Menjadikan Malaysia sebagai pusat dan tumpuan utama dunia bagi perkhidmatan komunikasi dan multimedia
- Menggalakkan pewujudan masyarakat di mana perkhidmatan berdasarkan maklumat sebagai asas pembangunan kualiti hidup yang berterusan
- Mencambahkan dan memupuk sumber maklumat dan perlambangan budaya tempatan
- Mengawal selia bagi faedah jangka panjang pengguna akhir
- Menggalakkan tahap keyakinan pengguna yang tinggi dalam penyampaian perkhidmatan daripada industri itu
- Memastikan penyediaan perkhidmatan sama rata yang mampu dibayar melalui infrastruktur kebangsaan yang sentiasa ada
- Mewujudkan suasana aplikasi yang giat bagi pengguna akhir
- Memudahkan pengagihan secara berkesan sumber seperti tenaga buruh mahir, modal, pengetahuan dan aset kebangsaan
- Menggalakkan pembinaan keupayaan dan kecekapan dalam industri percantuman Malaysia
- Menjamin keselamatan maklumat dan kebolehpercayaan dan keutuhan rangkaian

Nilai-nilai Teras

- Berwibawa
- Integriti
- Kompeten

Visi

Mewujudkan suatu industri komunikasi dan multimedia yang berdaya saing, cekap dan kian mengawal selia kendiri yang menjana pertumbuhan bagi memenuhi keperluan ekonomi dan sosial negara.

Misi

Kami komited untuk:

- Menggalakkan capaian kepada perkhidmatan-perkhidmatan komunikasi dan multimedia
- Memastikan para pengguna menikmati pilihan dan tahap perkhidmatan yang memuaskan pada harga yang berpatutan
- Menyediakan proses pengawalseliaan yang telus bagi memudahkan persaingan yang adil dan kecekapan dalam industri
- Memastikan penggunaan terbaik sumber-sumber spektrum dan penomboran
- Mengadakan perundingan dengan pengguna dan penyedia perkhidmatan secara lazim serta memudah usaha sama dalam industri

Piagam Pelanggan

Janji kami kepada pelanggan kami ialah:

Pengguna Awam

- Merekodkan semua aduan yang diterima
- Memberikan maklum balas kepada pengadu dalam tempoh tiga (3) hari bekerja
- Memajukan aduan yang diterima kepada penyedia perkhidmatan berkaitan dalam tempoh lima (5) hari bekerja
- Membuat susulan tentang status aduan daripada penyedia perkhidmatan selepas 15 hari

Pemohon Penguntukan Radas (PR)

• 60 hari untuk memproses permohonan PR tertakluk kepada mesyuarat Jawatankuasa Pelesenan, penyelarasan sempadan dan kelulusan FACSMAB, JTC dan trilateral (Malaysia, Singapura dan Indonesia)

Penguntukan Penomboran

- 30 hari untuk memproses permohonan penyerahan hak biasa contohnya, Permohonan Penomboran PSTN
- 45 hari untuk memproses permohonan penyerahan hak khas contohnya, telefon mudah alih, kod pendek

Pemohon Lesen

- 45 hari dari tarikh permohonan lengkap diterima untuk memproses permohonan lesen NFP, NSP dan CASP dan mengesyorkan kepada Menteri untuk kelulusan
- 30 hari dari tarikh permohonan lengkap diterima untuk memproses pendaftaran kelas NFP dan NSP
- 15 hari dari tarikh permohonan lengkap diterima untuk memproses pendaftaran lesen kelas ASP

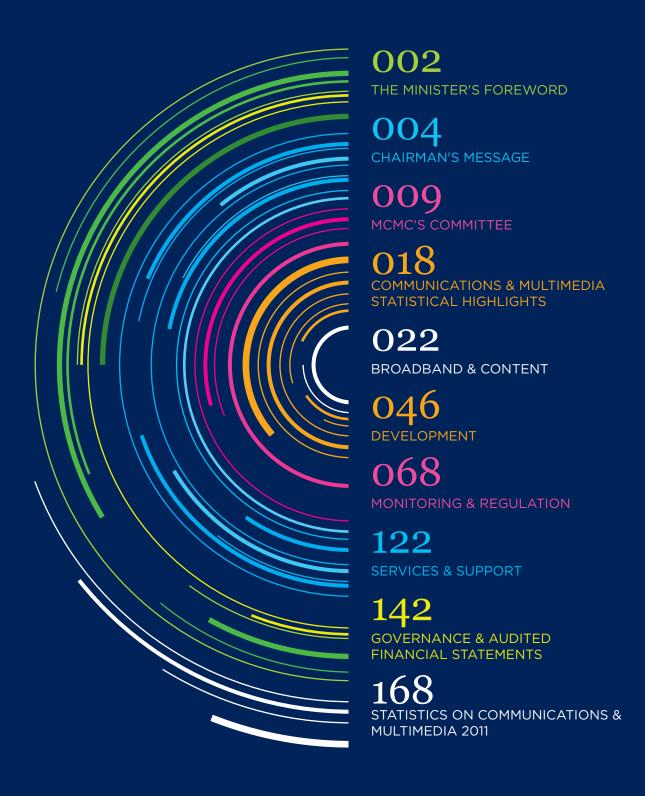

Pelesenan

- Menggalakkan persaingan adil dan pembangunan pasaran melalui proses kawal selia yang telus seperti yang telah digariskan dalam Akta Komunikasi dan Multimedia (AKM) 1998
- Menyediakan penyelesaian terhadap pertikaian apabila perlu
- Menggalakkan kawal selia yang berkesan dengan memantau semua perkara penting berkaitan prestasi pemegang lesen dan melaporkan kepada Menteri di setiap penghujung tahun
- Mengkaji semula Syarat dan Peraturan setiap tiga (3) tahun atau apabila diarahkan oleh Menteri. Ini bagi memastikan Syarat dan Peraturan kekal relevan

KEHENDAK PERUNDANGAN

Menurut Seksyen 47 Akta Suruhanjaya Komunikasi dan Multimedia Malaysia 1998, Suruhanjaya Komunikasi dan Multimedia Malaysia dengan ini menerbitkan satu laporan mengenai aktiviti-aktiviti SKMM dan mengemukakannya kepada Menteri Penerangan, Komunikasi dan Kebudayaan berserta satu salinan Penyata Kewangan Kumpulan Wang SKMM yang telah diaudit bagi Tahun Berakhir 31 Disember 2011 untuk dibentangkan di hadapan kedua-dua Majlis Dewan Rakyat dan Dewan Negara.

contents

The year 2011 followed on the successes and formula in bringing broadband connection to the people living in all corners of Malaysia. No-holds are barred in efforts to close the gaps in broadband availability towards reaching a fully connected 1Malaysia.

The Minister's Foreword

The networks and services, wireless villages (Kampung Tanpa Wayar), cellular towers, Community Broadband Centres, the 1Malaysia netbook distribution programme, and U-Pustaka were all pushed to newer heights. High speed broadband coverage also increased by passing over 1 million premises.

All these laid the foundation for industry growth in new services and in getting more people to use it as a digital lifestyle. The industry can be seen to continue its growth from past years to now reaching RM48.9 billion by end 2011 from RM33 billion in 2006 and RM41 billion in 2009, which is in tandem to technological advancement and growth in demand.

2011 also saw increased tempo in the development of creative content and applications where foundation is being built or strengthened in preparing for it to be a major contributor in sustaining future growth of the industry and contributing towards our target of becoming a high income nation. Weaknesses and gaps are being addressed so that Malaysia can leverage on it not only to create economic value but also to promote local content from our rich culture and heritage.

As broadband takes its bite deeper into the fabric of Malaysian lives, the new found empowerment from wider availability and choice of broadband connectivity also brings along many positives and some negatives. On the positives, we have found cases where our broadband programmes have enriched and transformed lives. We intend to bring out these inspiring cases to the open. Reducing the negative elements and keeping people safe on the network, in particular women and children took greater prominence as various awareness initiatives are rolled out.

To end, this Annual Report 2011 presents clear information on the activities and functions of the Malaysian Communications and Multimedia Commission as the regulator and developer of the industry. I am confident that the Commission is strongly placed to continue its efforts in supporting and facilitating the transformation to a digital economy and in broadband connecting 1Malaysia to the world.

DATO' SERI UTAMA DR RAIS YATIM Minister of Information,

Communications and Culture

Chairman's Message

DATO' MOHAMED SHARIL TARMIZI Chairman Malaysian Communications and Multimedia Commission (MCMC)

2011 has been yet another fruitful year for MCMC, in which the momentum from 2010 was leveraged upon to push broadband take up to newer heights supported by our successful collaborative development framework with the industry and in particular the guidance provided by our esteemed YB Minister.

OVERVIEW OF WHAT WE HAVE ACHIEVED IN 2011

We surpassed the difficult target of 50% broadband households in 2010 and this year we pushed it up further to a new height of 62.3%. We have achieved major progress in the take up performance of broadband services in a very short timeframe. If we just take a look back in time that in 2006, our broadband household was only at 11% and in 2009 it went up three folds to 31.7%.

The picture we have today is quite different. We have now an environment of 5.6 million broadband subscriptions up from a mere 897,100 in 2006. Mobile subscriber penetration rate went up from 72.3% (19.4 million) in 2006 to 127.7% (36.7 million) in 2011 as we continue to push coverage towards the target of 97% in 2012 (we are currently at 95%).

Whilst 2G mobile services provided almost ubiquitous coverage and more

than 100% subscriber penetration in a mature market, mobile broadband on 3G-HSPA and WiMax contributed to very encouraging take up and fuelling broadband penetration. 3G-HSPA went up to 10.3 million from 8.6 million registering 19.7% and improving on the growth rate of 17.1% in 2010. Celcos are generally doing well in the market as average EBITDA margins stood at 47% in 2011. This augers well for the Celcos as it allows them to reinvest and upgrade technology and to customers, new and better services can be offered. We are generally at par with developed countries in terms of technology adoption, and in 2011 saw the introduction of 3G-HSPA plus commercial service to consumers which offers them higher speeds access of up to 42 Mbps and the upcoming LTE technology that is expected to go live in 2013 with the assignment of 2.6 GHz spectrum.

It is noteworthy that our next generation high speed broadband service (HSBB) rollout in a publicprivate partnership between the

Government and Telekom Malaysia is quoted by Informa Telecom and Media to have comfortably outpace other deployments in the region, including Singapore, Australia and New Zealand. By the end of 2011, HSBB is available to over 1.16 million premises and with 248,900 subscribers connected. The HSBB open access network also saw most major players such as TM and Maxis signed on to it, which will lead to more choices of competitive offerings with value added products and services that will entice the business and residential community.

The overall state of broadband internet impact is also reflected in the tremendous growth in local exchange of Internet traffic peering which grew over 20 times from just 249 Mbps in 2007 to more than 5052 Mbps in 2011.

Driven by ICT related trade and private consumption, it is hearty to note that our Internet contribution to GDP stands at 4% in 2010 as

reported in Online and Upcoming: The Internet's Impact on Aspiring Countries, published in January 2012 by McKinsey & Company. This ranks Malaysia on par with some other developing countries. The future of our industry looks bright and in the coming years, Internet contribution to Malaysia GDP can be further enhanced through development in the focus areas and initiatives under the NKEA-CCI including getting online activity to be an increasing part of doing business for a greater number of SMEs. The MCMC underpins and support the Economic Transformation Programme in which the NKEA-CCI is one of the twelve NKEAs that is expected to contribute to the overall socio-economic wellbeing of the nation. We took operational sponsorship of the NKEA-CCI ETP programme and facilitating delivery of over 57 projects. In 2011, NKEA-CCI returned a sterling performance in the delivery of the projects which contributed to the Minister being the top rank achiever among all the Ministers involved in the NKEA. Ensuring the continued success of the NKEA-CCI programme is important to us as it charts out the framework and initiatives to develop growth areas from new content and applications services while pushing and enhancing what we already have in place towards achieving the 2020 goal of a sustainable, high income economy for all.

In the field of multichannel pay television, it is also interesting to note that CASBAA Report 2011 (Association of digital multichannel TV, content, platforms, advertising and video delivery across Asia) entitled Regulating for Growth 2011: A Regulatory Regime Index for Asia Pacific Multichannel Television rated the Malaysian regulatory

environment as one of the favourable market environments in the same rank as Japan and Australia, and closely behind the most favourable environment which is Hong Kong and New Zealand. The same report further puts the GDP contribution by Malaysian multichannel pay-TV at 0.5% which is among the highest in the 15 benchmark countries and compares favourably with US (at 0.8% of GDP) and UK (at 0.6% of GDP) and is better than Singapore (at 0.1%) and Hong Kong (at 0.2%). Profit margin for multichannel pay TV in Malaysia is also among the lowest at 25-30%.

CLOSING THE GAPS TOWARDS A CONNECTED IMALAYSIA

We want to ensure that every citizen is broadband connected and able to access the Internet. Making available access is one thing and empowering the people to use it effectively is what we are trying to also achieve so that no one is left behind in this development.

Firstly our one million 1Malaysia Netbook initiative which comes with an affordable broadband subscription package distributed to students of low income families has facilitated not only the students but also their family to access the internet. Like a seed being planted into a family, the scheme could probably grow in empowering not only one student but impact about five people in the household. This distribution was carried out at a feverish pace reaching as many as 471,379 by end of 2011.

People in the urban areas usually can easily get free Wifi access in restaurants or coffee shops brought about by the value seen by the shop owners and service providers, as well as those made available through a requirement for Kuala Lumpur City Hall area under the Connected@ KL project of the EPP ensuring broadband for all, which involves an estimated 1,000 premises. In rural areas, the scenario is different and to supplement and improve access to internet in these areas, the village WiFi hotspot (Kampung Tanpa Wayar) concept was suggested by our Minister to compliment the services available from the CBCs. Up to end of 2011, 1,408 Kampung Tanpa Wayar hotspots and 251 CBCs were implemented to close the gap and benefit over one million people in rural areas.

We are working on all fronts as we march forward towards a Connected 1Malaysia by 2020. Two NKEA-CCI Entry Point Projects (EPP) focus on extending broadband infrastructure. The first one is the EPP ensuring broadband for all, which addresses the urban gaps through industry focus group engagements and amendments to building by-law enabling new developments or premises to be broadband ready. The second is the EPP extending reach of infrastructure addressing sub-urban and rural areas which includes building 1000 new towers to bring mobile coverage to 97% by 2012. So far, 326 towers were completed in 2011.

The existing SchoolNet and the rollout of 1BestariNet by the Ministry of Education in 2011 will provide a broadband connectivity platform to over 9,000 urban and rural schools throughout Malaysia for an integrated learning environment. The extensive nationwide network will facilitate lower cost extension of broadband infrastructure and the opportunity to leverage upon it for other purposes in areas near to the rural schools.

Rollout commitments by licensees either in the Universal Service Programmes or in resources such as assignment of spectrum and numbers are closely monitored and supervised as they all form an integral part of the overall industry development plan. Thus swift actions are taken to bring all in line with this march towards a Connected IMalaysia.

CARING AND REACHING OUT TO CONSUMERS

While we try to reach out to those not yet connected, and as services are becoming more ubiquitous to all, we need to ensure that those already connected get what they paid for as promised by the service providers or at least meet the minimum quality of service standards and that service complaints are being reasonably dealt with.

With the increased population of communications and multimedia users, we need to promote proper and positive use of services and online safety especially to the uninitiated and safeguard our children. Basically consumers should feel safe, secure and highly confident when using the services offered by the service providers, who alternately are doing their necessary best to ensure integrity, security and reliability in their service delivery.

On the overall in 2011, the level of compliance by the communications and multimedia service providers in the required service delivery standards to consumers stand at 96.4%. Although this remains fairly high at the macro level, at the micro level, mobile coverage and drops calls are paramount issues to

individual consumers. Service providers are encouraged to do scheduled and unscheduled self quality assessment. On our part, the MCMC carried out quality assessment using mobile data collection vehicles located at all our regional centres and any shortfalls found in the assessment are communicated to the service providers who are required to address them within reasonable timeframe through activities such as network optimisation, additional towers and transmitters.

As for postal delivery standards, we have set the road for improvement over the period 2012-2015 for speed and reliability as we aimed to build and improve confidence in the service delivery to achieve a level of 89% on speed and 99.97% reliability for letters among other items. In 2011, the postal transformation plan for Sabah and Sarawak which was launched in May 2010 by the YB Minister took a step forward with the introduction of 402 community postmen, 586 community post representatives and 10 mobile post offices all over the two states.

We see the number and nature of consumer complaints reported to MCMC as a very important indicator and feedback mechanism which gives us a pulse onto the level of services provided to consumers. In 2011, complaints on internet content ranked the highest at 522 followed by mobile at 339, TV broadcasting at 27 and radio broadcasting at 7. Out of these, 588 complaints were investigated under various offences of the Acts with 30 cases compounded and 10 cases brought to court. Most cases are related to SMS, new media and breach of license conditions.

MCMC has established the Network Security Centre which monitors our networks against security and integrity threats so that consumers can continue using the network services confidently and feeling safe and secure. In 2011, the Centre handles over 3,921 cyber incidences involving system and information security breaches. Phishing involving banks and financial institutions tops the list at 1,258 incidences. We do not walk alone as we believe that collaboration or partnership are critical in building capacity to handle the ever increasing cyber security issues. Thus, we have working relationships and continuously build on it firstly with our licencees and with agencies such as the National Security Council, Cyber Security Malaysia, the Royal Malaysian Police, Internet Banking Task Force, SANS Institute, Hack In The Box (HiTB), International Multilateral Partnership Against Cyber Threats (IMPACT), MYNIC and with other regional and global counterparts. The list keeps expanding as we speak.

PROMOTING CREATIVE LOCAL CONTENT AND APPLICATIONS AND ENRICHING LIVES

With broadband reaching critical mass, Malaysia now has a large base of users ready to consume content and applications that will enrich their lives. In a connected society, we do not only want our people to be connected, but also to be culturally rich.

The opportunity for growth in content and application development is good if not great, as summed up in the NKEA-CCI. Two of its themes, namely *serving*

tomorrow, encourages the nurturing of the creative content industry, track and trace and lifestyle applications in Connecting 1Malaysia. Whereas pushing boundaries seeks opportunities to leverage on the use of content and applications in other sectors in particular for learning, healthcare and government, expected to see us push our up GNI and new job creation in the coming years.

In 2011, 38 content and applicationbased projects were evaluated and sponsored under the NKEA-CCI of which most KPIs are met. Key highlights include more than 28,000 hours of national archives, films, documentaries, visual and audio content being digitised to promote and commercialise content on Malaysia's cultural richness. In addition, more than RM300 million worth of content and intellectual property rights have been exported globally. MyEmail was launched too, enabling a secured communication channel to more than 3,000 government e-service applications already online as we approach the goal of zero physical Government counter services by 2020. Security and trade facilitation pilot project and edible bird nest traceability development using RFID showed much promise going forward into 2012.

Creative content industry received a big boost with the launch of the National Creative Industry Policy in October 2011 and facilitated by funds or grants including RM100 million allocated under the MCMC as well as the RM25 million contribution to set up the Akademi Seni Budaya dan Warisan Kebangsaan (ASWARA)'s Digital Animation and Multimedia Laboratory. 77 SMEs became

recipients of the grants from the MCMC Creative Industry Fund which totals RM35 million by end of 2011. Global market opportunities for our content are also being explored with our presence at MIPTV, MIPCOM, Hong Kong Film Mart and Asia TV Forum in collaboration with other government agencies and local companies raking a total of RM140 million in investment and RM24 million in sales

Access to a good collection of books in our libraries is a challenge as they are usually available only in specific libraries. Going around looking for it can be both difficult and time consuming and probably a costly affair too. However, the situation no longer has to be this way with the launch of the U-Pustaka service in March 2011. This project led by a consortium of eight libraries nationwide enables the people living anywhere to borrow and return books without having to be present at the specific libraries. Served by a portal, electronic payment and postal services, it has gathered over 180,000 members and visited by people from around the world by end of 2011. This collaborative initiative has won us the MSC Malaysia Asia Pacific ICT Awards (MSC Malaysia APICTA) 2011 but more importantly it won the hearts of many as the large collection and resources are now accessible to all, touching and enriching many whose quest for knowledge are now fully open.

EMPOWERING THE INDUSTRY

We promote and encourage the industry to self-regulate and to develop industry human capacity to upgrade its ability to manage and compete not only domestically

but also globally. In 2011, we step this effort up further by engaging the industry in knowledge and skills training besides ongoing self development of industry codes/guidelines by members of the industry forums themselves in particular technical, consumer, access and content codes. The industry is encouraged to comply with their own codes and guidelines.

The wisdom to understand and comply with the provisions of the law comes from knowing and understanding it. Education and training are thus important to build a self regulating industry and to know what is best for itself. On this note, we embarked on a journey to have our SKMM Academy take on to develop and channel relevant learning and development programmes for the industry. For example, in our collaboration with Universiti Teknologi Malaysia, we are now offering certificate courses in basic and advanced spectrum management. Regulatory courses, workshops and panel discussions in collaboration with a number of institutions are also delivered such as on networked content and social media development, network security, technology, market, as well as compliance workshops for licensees.

The industry's technical standards forum is also active in developing standards and guidelines to manage and promote the industry in particular on safety and interoperability. In 2011, a set of standards on digital terrestrial television, in particular on the receiver was updated in preparation for the launch of digital terrestrial TV and the process of migration from analogue to digital. Critical

to the internet industry is the implementation and compliance test guidelines on Internet Protocol version 6 (IPv6) which the industry develops and agreed to in its move to be all IPv6 compliant. We can now look forward to a larger addressing space with IPv6 as well as better security for the industry to continue growing without constraints before the IPv4 addresses run out possibly by 2012.

REGULATORY UPDATES

2011 saw various new and updates to policy and regulations as a result of our continuous regulatory work which I would like to highlight the key ones:-

- Proposed amendments to Provision 25 of the Uniform Building By-Law 1984 was agreed upon by the Majlis Mesyuarat Negara in May 2011 paving the way for broadband infrastructure to be a required basic infrastructure for new development.
- Postal Act 2011 was approved by the Parliament in December 2011 replacing the Postal Services Act 1991 with new provisions to regulate and encourage development of the new and changing postal industry.
- Policy on National Terrestrial TV
 Digitalisation Implementation. It
 has been a long journey on this
 policy development and all policy
 aspects of its implementation
 are in place. A tender to appoint
 a common integrated digital
 terrestrial television transmission
 infrastructure provider is expected
 to be issued in 2013 to kick start
 the service and the migration
 from analogue to digital.

- Spectrum Plan 2011, published in September 2011 replacing the November 2006 plan basically updating the plan to incorporate the decisions taken in ITU radio regulations 2008.
- MCMC is a partner of Ministry of International Trade and Industry in the implementation of the Strategic Trade Act 2010 on licensing (ePermit)
- Internationalised Domain Names
 (IDN: for example in Jawi, Tamil
 and Chinese) was opened for
 registration at end of 2011 to assist
 commercial entities to promote
 their products based on their own
 native language.
- New format for mobile number was introduced as it goes eight digit to ensure sufficient supply of numbers to promote growth. The new format using eight digit subscriber numbers and starts with 011 were assigned to the mobile players for implementation beginning March 2011.
- Malaysia and Singapore agreed on a progressive mobile roaming price reduction of voice calls and SMS by all mobile operators in Malaysia and Singapore in April 2011.

LOOKING FORWARD TO THE FUTURE

We have done well to bring the industry to this state of progress in 2011. I would like to register my utmost appreciation to the YB Minister for his guidance and all partners of the industry for their support to return this sterling performance.

The next few years going towards 2020 will be a great challenge for us all as we push towards the 2020 goal of a fully-developed Malaysia, a prosperous nation enjoying high income by all and for the long run. We noted that with data use growing strongly and existing capacity under pressure, our broadband network will be undergoing necessary expansion to keep up with demand. Improving speeds and service quality will be a priority. Broadband growth will be driven by demand for higher internet speed in both the fixed-line and mobile segments brought about by increasing use and adoption of digital lifestyles everywhere.

FAREWELL AND WELCOME

The MCMC has said goodbye to a number of colleagues this year who have either left to explore other options or mandatory retirement. We also welcome new colleagues who have joined MCMC and wish them well in their engagements here with us. I would like to put on record my gratitude as well as that of everyone at MCMC to these colleagues, and in particular to Tan Sri Khalid Ramli for the outstanding work and contribution to nurture development, wellbeing of the industry and consumers until his term ended in mid-October 2011. I wish them well and good luck in their future endeavours.

010 IIIIIIIIIII COMMISSION MEMBERS

Commission Members

SITTING FROM LEFT TO RIGHT

Dato' Dr. Madinah Mohamad Dato' Mohamed Sharil Tarmizi Dato' Sri Kamaruddin Siaraf STANDING FROM LEFT TO RIGHT

Datuk Idris Abdullah Dato' Thanarajasingam Subramaniam Datuk Mohamad Salim Fateh Din

Dato' Mohamed Sharil Tarmizi

Dato' Mohamed Sharil Mohamed Tarmizi was appointed as Chairman of the Malaysian Communications and Multimedia Commission (MCMC) effective 16 October 2011. He served as a Member of the Commission from 1 May 2006 for two terms during which time he was subsequently invited to join the MCMC as Chief Operating Officer on 16 June 2008 prior to his current appointment.

He has extensive experience particularly in the areas of legislation and the communications and multimedia industry. Prior to joining MCMC as Chief Operating Officer, Executive Director and Head of Strategic Planning at a local reputable firm that offers financial advisory services and strategic consulting.

In the international arena, Dato 'Sharil is recognised for his expertise in the field of Internet governance in which he was elected unanimously as the Chairman of the Government Advisory Committee (GAC) for two consecutive terms from January 2003 to March 2007 by the members consisting of developed and developing countries. During the same period, he was the first officer from the Government sector who had served as a member of the Board of the Internet Corporation of Assigned Names and Numbers (ICANN), a world regulatory body for Internet domain names.

At the end of his tenure with ICANN. he was honoured by the GAC, ICANN Board and Global Internet community for successfully navigating the GAC and ICANN in finding a solution on Internet Governance in two United Nations World Summits on the Information Society in Geneva (2003) and Tunis (2005).

He is one of the few members of ICANN selected to develop a framework for the introduction of non-ASCII character set in the global domain name system, to enable communities to have Internet domain names in languages other than English or Roman letters, thus narrowing the digital divide.

Dato' Mohamed Sharil has also worked for the International Trade Organization (WTO) in the field of capacity building, helping a number of countries to undergo regulatory reforms in preparation for globalisation.

Among his notable achievements was his involvement in the development of the Telecom Reference Paper on Telecommunications Sector and also in the production of two reference papers on Postal Services in Postal Sector and Express Delivery for WTO. In addition, he was one of the main consultants representing the telecommunications sector in negotiations sessions at WTO besides involvement in the trade and economic cooperation agreement involving Malaysia, for instance with Japan, Australia and New Zealand. He was also a part-time consultant for the International Telecommunications Union (ITU) and the World Bank, particularly in the area of spectrum and regulatory reform.

He has led several courses around the world, working with organisations such as the Pacific Island Telecommunications Association (PITA), Asia Pacific Telecommunity (APT) and a number of regulatory organisations around the world.

His writings on subjects related to Internet and new media have been widely used. As an expert in various fields, he was appointed as the Deputy Chairman for a child online protection programme by the ITU Board, an effort to address the negative online content in cyberspace, particularly on young people and children. He also sits on the Board of Trustees of the International Partnership Against Cyber Threats (IMPACT), an international organisation that implements cybersecurity programme on behalf of the ITU.

In the local arena, he is a member of the Board of Directors of the Multimedia Development Corporation (MDeC), the organisation that manages and oversees Multimedia Super Corridor (MSC Malaysia).

He holds a Bachelor's Degree in Law from University College of Wales, Aberystwyth and qualified as a Barrister from Gray's Inn, England and Wales (UK).

Dato'Sri Kamaruddin Siaraf

Dato' Sri Kamaruddin Bin Siaraf has been reappointed as a Commission Member of the Malaysian Communications and Multimedia Commission effective from 10 April 2011 for a period of two years.

He is the Secretary General of the Ministry of Information, Communication and Culture. As the Secretary General, Dato' Sri is very much involved in the formulation of the National Creative Industry Policy, the setting up of the Personal Data Protection Commission, the implementation of National Broadband Initiatives, the development of the content industry, and the execution of the 1Malaysia campaign and initiatives. Currently, Dato' Sri holds the position of Chairman of ASWARA. He also sits on the Board of GITN Sdn Bhd and BERNAMA.

He holds a Master of Development Economics from Vanderbilt University, USA and a Bachelor of Economics (Hons) from University of Malaya. He began his career in public service as an Administrative and Diplomatic Officer in the Economic Planning Unit in 1997.

He has served in various ministries and government departments, including at the state level such as Policy Planning (Commodities) Unit - Ministry of Agriculture, Negeri Sembilan Department of Land and Mines, the Director-General of Tourism Malaysia and the Secretary of a State Government.

Dato' Dr. Madinah Mohamad

Dato' Dr. Madinah Mohamad was re-appointed to second term as a Member of the Malaysian Communications and Multimedia Commission beginning 21 March 2012. She is the Secretary General of the Ministry of Science, Technology and Innovation Malaysia (MOSTI). As Secretary General, she is responsible for leading the formulation of policy and science policy, technology and innovation as well as administration and management of MOSTI.

She graduated with a Bachelor's Degree in Political Science from Universiti Sains Malaysia and a Masters in Human Resource Development from Universiti Putra Malaysia. She was awarded PhD in Human Resource Development by the Senate of Universiti Putra Malaysia in the 567th meeting on 12 July 2012.

She began her career as an Administrative and Diplomatic Officer in 1981 with the Ministry of Foreign Affairs. Prior to her current position, Dato' Dr. Madinah Mohamad has had vast working experience in various Government agencies such as the Public Service Department, the Ministry of National and Rural Development, the Ministry of Works, and the National Unity and Integration Department.

Dato' **Thanarajasingam** Subramaniam

Dato' Thanarajasingam was appointed as a Member of the Malaysian Communications and Multimedia Commission on 1 December 2010 for the period of 2 years. He has served over 36 years with the Malaysian Foreign Ministry.

Prior to that, he had served as the Ambassador of Malaysia to Brazil, Suriname, Guyana and Venezuela from 1998 to 2001. He was made the Deputy Permanent Representative, Permanent Mission of Malaysia to the United Nations, New York, U.S.A between the period 1993 and 1997. In 1996, he had served as Chief of Staff to the United Nations General Assembly President as well. At the local and regional fronts, he has held various distinctive positions including the Deputy Secretary-General for Multilateral Affairs, Ministry of Foreign Affairs from 2004 to 2006 where he handled all matters pertaining to international economics and international organisations. He had also served as the Director General of ASEAN, Malaysia, where he prepared Malaysia's position for various ASEAN meetings, in particular, the ASEAN Summit of Leaders in Bali (2003) and Vientiane (2004). He is currently a member of the Asean - Indian Eminent Persons Group representing Malaysia.

He holds a Bachelor of Arts (B.A) degree from University of Malaya in 1973 and Master of Arts (M.A) degree from New York University, USA in 1985.

In recognition of his contributions, he received many awards and the most recent one was in 2010, where he was awarded the Grand Officierdans l'Ordre National du Mérite, from the Government of France.

Datuk Mohamad Salim Fateh Din

Datuk Mohamad Salim Fateh Din was appointed as a Member of the Malaysian Communications and Multimedia Commission on 1 December 2010 for a period of 2 years.

He is the Managing Director of Gapurna Sdn. Bhd. and a Board Member of the Gapurna Group. Datuk Mohamad Salim owns and manages property development and investment business through Gapurna Sdn. Bhd. and its subsidiary companies in the group. As a real estate developer, Gapurna is among the first to adopt the 'Green' concept. The hallmark developments that Datuk Mohamad Salim had spearheaded include the P.J Sentral Garden City and the 348 Sentral at KL Sentral.

Both developments have garnered the highest standards of Green Building Index ("GBI") as well as LEED (Leadership in Energy & Environmental Design ("LEED"); and are hailed as industry benchmarks for being among the "Greenest, Most Sustainable and Integrated" developments in the country.

He is also the Non-Executive
Chairman of GCH Retail (Malaysia)
Sdn Bhd, a subsidiary of Dairy Farm
International Holdings Ltd, the
operator of the Giant Hypermarkets,
Guardian and Cold Storage retail
chain. One of his notable achievements
includes the reengineering of the
processes for the modern distribution
centre in Giant Sepang.

Datuk Mohamad Salim is the pioneer who introduced the "Super Store Petrol Station" concept to leading oil companies in Malaysia. He was also highly instrumental in the setup of the Malaysia-Pakistan Business Council which he now chairs. In recognition of his unwavering contributions to support the bilateral trade opportunities between Malaysia and Pakistan, he was awarded with the 'Medal of Excellence' by the Government of Pakistan.

In addition, he is also a Member of the Board of Trustees who has long served in Cheras Education Foundation and an Independent Non-Executive Chairman of British American Tobacco Malaysia Bhd.

Datuk Idris Abdullah

.....

Datuk Idris Abdullah was appointed as a Commission Member on 7 November 2011. He holds a First Class Bachelor of Laws (Hons) from University of Malaya and later started his career as a lawyer in 1981.

Datuk Idris is currently a senior partner at Idris and Company Advocates, Kuching, Sarawak. He also holds several key positions in Malaysia and Singapore, namely as a Director of Bank Pembangunan (Malaysia Development Bank) Berhad, Chairman/Director of Pembangunan Leasing Corporation Sdn Bhd, Chairman/Director of PLC Credit & Factoring Sdn Bhd, Chairman/Director of Magnus Energy Group Ltd (listed on Singapore SESDAQ), Chairman/ Director of APAC Coal Ltd (listed on Australian Stock Exchange), Chairman/ Director of Xian Leng Holdings Bhd (listed on Malaysian Stock Exchange), Chairman/Director of Industrial Power Technology Pte Ltd and Director of Konsortium Rangkaian Serantau (Regional Network Consortium) Sdn Bhd. He is also a Commission Member of the Companies Commission of Malaysia (SSM).

Highlights of Statistics on Communications & Multimedia as at end of 2011

PENETRATION RATES AT A GLANCE

YEAR	BRO	ADBAND	CELLULAR PHONE	DEL	
	PER 100	PER 100	PER 100	PER 100	
	INHABITANTS	HOUSEHOLDS	HOUSEHOLDS	INHABITANTS	
Note	a	b	С	d	
2010	16.6	55.6	119.2	42.5	
2011	19.4	62. 3	127.7	37.3	

Explanatory notes:

- a The broadband penetration rate per 100 inhabitants is calculated by dividing the sum of household and non-household subscriptions by the number of inhabitants and multiplying by 100. Public WiFi subscriptions are not taken into account.
- b The broadband penetration rate per 100 households is calculated by dividing the estimated number of private households with broadband access by the number of private households and multiplying by 100. Non-private household subscriptions and public WiFi subscriptions are not taken into account.
- c The cellular telephone penetration rate refers to the total subscriptions divided by the total population and multiplied by 100. A penetration rate over 100% can occur because of multiple subscriptions.
- d The DEL penetration rate per 100 households is calculated by dividing the number of private household subscriptions by the number of private households and multiplying by 100.

NUMBER OF BROADBAND SUBSCRIPTIONS AND PENETRATION RATE

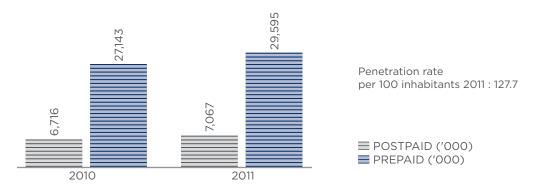

YEAR		FIXED (WIRED) ('000)				WIRELESS ('000)			TOTAL ('000)
	ADSL	SDSL	FIBER	OTHERS ¹	MOBILE	PAY PER USE	OTHERS	NOTEBOOK ('000)	(000)
2011	1,733.4	9.6	68.4	14.6	2,071.2	601.7	290.4	123.0	4,912.3
TOTAL PO	PULATION ('(000)							28,704.8
POPULAT	ION PENETRA	TION RAT	E						19.4
				Н	OUSEHOLDS				
2011	1,448.2	0.5	59.6	5.5	1,295.2	601.7	283.7	123.0	3,817.4

Broadband Management

NATIONAL BROADBAND INITIATIVE

MEASUREMENT AND BENCHMARKING OF BROADBAND OWNERSHIP

Broadband is a major catalyst of the ICT industry and the mainstay of the country's transformation programme. Government initiatives to improve broadband penetration rate had begun as early as 2004 and subsequently had been spurred further by the launch of the National Broadband Initiative in March 2010. Until the end of 2011, the rate of household broadband penetration has reached 62.3%, exceeding the target of 60% set. This remarkable increase compared to 2009 is proving the effectiveness of the initiatives that had been identified and executed. Figure 1 shows the

country's broadband penetration rate compared to the target set. The rates of household broadband penetration by state in 2011 also showed increase compared to 2010, as shown in Figure 2.

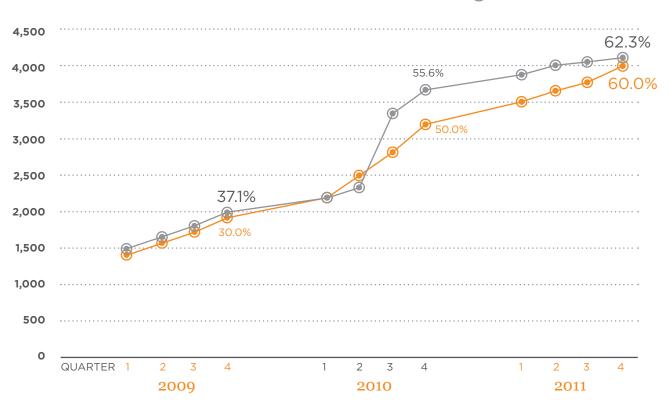

Figure 1 National broadband penetration rate

2011 PENETRATION

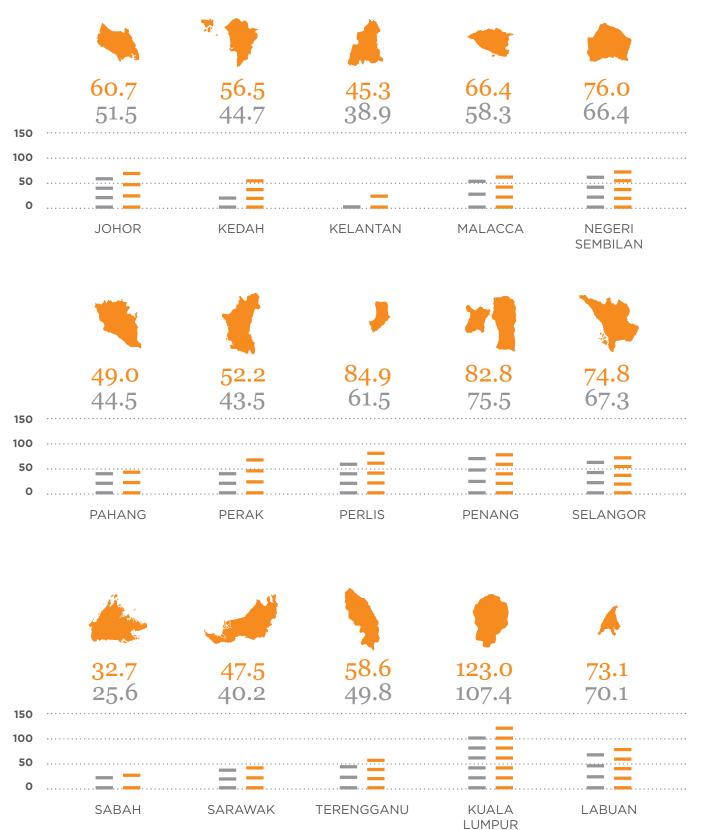

Figure 2 Household penetration rate by states

HIGH-SPEED BROADBAND

The implementation of high-speed broadband under the Public Private Partnership Agreement between the Malaysian Government and Telekom Malaysia Berhad (TM) has linked 1.16 million premises, with a total target of 1.3 million connections expected to be completed by the end of 2012. High-speed broadband connection involves the coverage area of 95 exchanges within high economic impact location and includes upgrading of the Metro network and the core network across the country as well as international networks abroad. Until December 2011, the total investment has reached RM4.801 million, and involved the access network, domestic and international core networks. In order to provide the core and access networks, 20,873 km of fibre optic cable has been installed throughout the country. The highspeed broadband services coverage area can be seen in Figure 3.

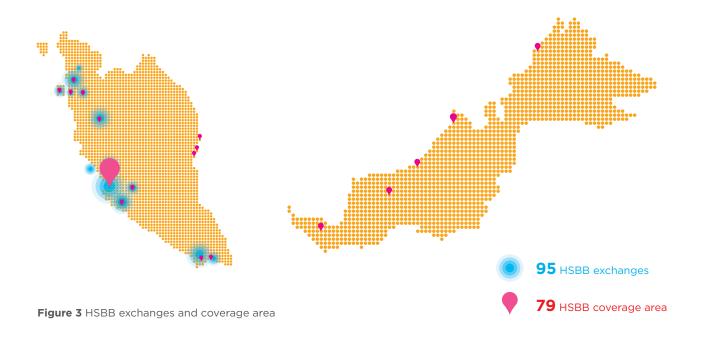

Unifi, one of the retail high-speed broadband services was launched in March 2010 and has recorded a total of 239,821 subscriptions, i.e. 204,365 for homes and 35,455 for business. This project had also connected 1,500 Government offices, 81 public and private universities and 27 Internet centres in urban and suburban areas.

Under the "open access" concept, 30,000 access have been offered to other telecommunication providers to offer high-speed broadband services under their own brand, which results in giving more choices to consumers. To date, more than 800 contractors and local companies have benefited from the training programmes and project implementation.

BROADBAND FOR THE PUBLIC

The initiatives to provide broadband services to the public are driven by private companies in competitive areas and Universal Service Provision (USP) in underserved and rural areas. Through these two initiatives, the broadband coverage is extended to 81% of populated areas. Cell phone coverage has reached 95% of populated areas with cellular subscription rates exceeding 125%. USP initiatives are carried out through the implementation of Wireless Village (KTW) and Community Broadband Centre (CBC), and the construction of telecommunication towers to house the cellular transmitter system and wireless broadband.

A total of 1,408 KTW, 326 towers and 251 CBCs have been developed in rural and underserved areas. In addition, community access facilities are also made available at public premises such as libraries, Information Office and other locations.

BROADBAND SUBSCRIPTIONS

Currently, the demand for wireless broadband services has increased to 55% of the total demand for broadband subscriptions. Breakdown of subscription packages according to the types of technologies used can be referred in Figure 4.

PROMOTING NATIONAL BROADBAND DEMAND

AWARENESS AND PROMOTION OF THE NATIONAL BROADBAND INITIATIVES

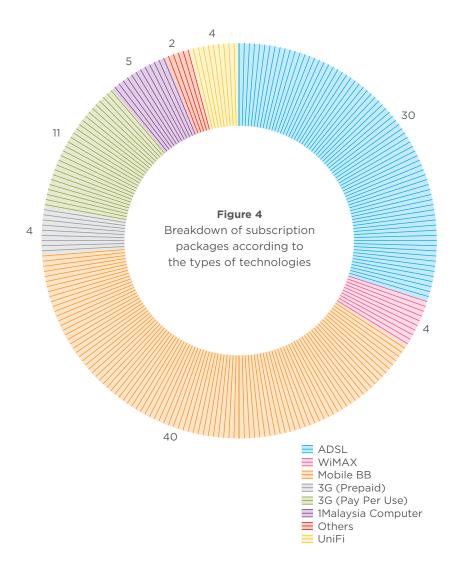

To promote demand towards broadband, focus has been given

on awareness, attractiveness and affordability aspects. As a measure to improve the user's knowledge on broadband, a number of activities were carried out through print and electronic media such as TV and radio ads. In addition, events such as the 1Malaysia Broadband Travel and 1Malaysia Broadband Carnival were also held throughout the country. These initiatives will be expanded to other states, especially in small towns where the broadband penetration rates are low.

......

A total of 6 events were conducted in Perak, Sarawak, Pahang, Sabah, Johor and Terengganu throughout 2011. Campaigns for local communities such as Siok Bah Broadband were also held in states with low broadband penetration rate.

Besides that, a training programme that included the aspects of ICT skills, development and content management, installation, troubleshooting and maintenance of the computer were also given to the general public, and were conducted in several CBCs. This training programme aims to help individuals to embrace ICT as a learning resource and as a channel to increase revenue. A total of 39,356 participants have participated and benefited from this programme. Rural residents who do not have the equipment and access to broadband can also register at the CBC to enroll in the ICT skills training programme.

INCREASING USAGE OF THE INTERNET BROADBAND

The significant increase in cellular penetration, broadband communication and Internet users is partly contributed by the abundance of Internet content and applications. Nevertheless, there are still rooms for improvement if more content and applications were to be developed.

These innovative applications not only make life easier but also give new meaning in communication. Realising this, the Government has set a number of initiatives to drive the creative content industry by allocating funds for individuals, groups and companies to produce high quality content and applications. In addition, the proposal to make Kuala Lumpur Creative Content Industry Mart (KLCCIM) will also boost the production of content and Internet applications.

COMPUTER PACKAGES AND AFFORDABLE BROADBAND

Under 1Malaysia Computer programme, a total of 471,379 units of netbooks was distributed to school students from lowincome families living in rural areas. The Netbooks also came with an affordable broadband subscription package.

COORDINATION, MONITORING & IMPLEMENTATION OF **BROADBAND INITIATIVES**

Along with the other initiatives under the National Transformation Programme, a decision on a policy agreed by the various committees at the national level was considered. Chaired by Deputy Prime Minister, the Cabinet Committee on the National Broadband Implementation has made various decisions, such as continuous monitoring of broadband penetration in states with penetration rates below the national average. Awareness and promotion activities are engaged to increase the demand for broadband services. In addition to this, communication facilities are also planned to be made compulsory as one of the basic utilities in new development areas. To achieve this, the Amendment Law of the Uniform Building By-Laws 1984 (UBBL) should be implemented immediately. For rural areas with limited communication facilities, the implementation of the Wireless Village initiative ensures that the community enjoy the benefits of the technology.

Chaired by the Prime Minister, the National IT Council, which also comprises the Chairman of Commission together with the Ministry of Information, Communication and Culture suggested the measures and mechanism in enhancing the national cyber security management. Focus was given to online scams and content issues, which normally contain elements of defamation.

In driving the National Transformation Agenda, several ICT ecosystem frameworks were proposed. These include creative industries, research and development, the public sector, talent development and application of ICT by people with special needs (disabled).

......

The MSC Malaysia Implementation Council Meeting, chaired by the Prime Minister has outlined the digital transformation action plan under the concept of Digital Malaysia. The concept led by the Ministry of Information, Communication and Culture is being coordinated under the Economic Transformation Programme Content National Key Economic Areas, Communication & Infrastructure (NKEA CCI). Emphasis is given on the use of ICT in disseminating government policies and improving the economy in rural areas. A plan to realise a 21st century modern village through the concept of digital home and digital village was incorporated in the implementation of broadband initiatives with focus given towards rural transformation programs that would improve the quality of life and income of the communities. The digital gap can also be narrowed by producing special apps for the local community that can empower them and at the same time encourage productivity in the entire digital economy ecosystem.

MCMC will continue playing the important role in coordinating the initiatives planned at the committee stage to ensure the success of National Broadband Initiative towards realising a Digital Nation.

Economic Transformation Programme

NATIONAL ECONOMIC KEY AREAS (NKEA) & COMMUNICATION CONTENT AND INFRASTRUCTURE (CCI)

National Key Economic Areas (NKEA) Content Communication & Infrastructure (CCI), which now has passed its first year of implementation, plays a key role in improving the quality of life of Malaysians. This is accomplished through providing universal access to enhance communication facilities and government services that improve productivity and business efficiency, which will further promote the development of technology and new applications.

CCI NKEA RESULTS

The Performance & Management Delivery Unit (PEMANDU) and Operating Committee with support from the ministries and agencies have identified 57 projects under the management and supervision of the 10 Entry Point Projects (EPP). The breakdown of number of projects in EPP is shown in Figure 5.

A total of 8 projects out of 57 projects was completed under the monitoring and management of CCI NKEA. These projects include:

......

- Establishment of Filming Incentives Division (EPP Creative Content)
- Establishment of the Creative Industries Division (EPP Creative Content)
- The launch of the 1Malaysia Email (EPP E-Government)
- Collaboration between the Government Transformation Plan (GTP) and Economic Transformation Plan (ETP) to ensure that the communications infrastructure used basic utilities (EPP Extending Reach)

In 2011, a total of 16 projects have been announced by the Prime Minister, including:

- Establishment of Konsortium Rangkaian Serantau Sdn Bhd (EPP Regional Network)
- Content Delivery Through IPTV System (EPP Creative Content)
- Launch of Online Business (EPP Connecting 1Malaysia)
- Launch of MedikTV Channel in hospitals and government clinics (EPP E-Health)
- Swiftlet Nest Online Traceability System (EPP Track & Trace)
- Wi-Fi facilities in Business Premises in Kuala Lumpur (EPP Broadband For All)

CCI NKEA under the supervision of the Ministry Of Information Communications & Culture (MICC) is progressing well and has achieved the Key Performance Indicators 2011 that have been established, based on the three themes, namely Serving Tomorrow, Pushing Boundaries and Enhancing Foundations.

Figure 5 Breakdown of number of projects in EPP

SERVING TOMORROW

Serving Tomorrow will address the paradigm change of shifting profit pools from infrastructure and access to applications and content, by strengthening Malaysia's domestic value-added advanced services, particularly creative content creation, payments and electronic commerce and connectivity application. In line with this theme, more than 28,000 hours of content from agencies under the MICC have been digitalised. This content which includes documentaries, films, and audio visual equipment, is able to maintain the country's heritage and at the same time promote Malaysian culture in the region.

They are marketed locally and globally through IPTV in 30,000 hotels from inside and outside of the country as well as 1,500 public transports in Malaysia. More than RM300 million of revenue was realised from the sale of content and intellectual property at the international level through Radio Television Malaysia, Media Prima Berhad and Perbadanan Kemajuan Filem Nasional Malaysia (FINAS).

PUSHING BOUNDARIES

Pushing Boundaries will fully leverage CCI in other sectors through coordinated efforts to provide access, devices, applications and content in order to facilitate the shift to a knowledge-based economy, particularly in E-Learning, E-Healthcare and E-Government. 1Bestarinet is currently being implemented to provide a learning platform and integrated connectivity to more than 9,000 primary and secondary schools in Malaysia. This initiative is expected to bring the level of teaching and learning in Malaysia on par with other developed countries. Malaysians are also now enjoying the convenience of on-line government facilities and services through more than 3,000 of government services provided.

ENHANCING FOUNDATIONS

Enhancing Foundations initiatives will capitalise on next generation infrastructure opportunities and build infrastructure to support the future growth of Malaysia, giving focus on the aspects of coverage, affordability and quality of access. To encourage the proliferation of broadband in business premises and residential areas, Connecting@Cities Programme was launched, with Kuala Lumpur and Kota Kinabalu as the pilot locations. While to address the issues on broadband prices and costs, Konsortium Rangkaian Serantau Sdn Bhd (KRS), which consists of 24 telecommunication companies have been established to plan and manage the submarine cable capacity on the national level as well as examining the viability of development of additional cable systems for Malaysia. The establishment of this consortium catalyses the development of submarine cable systems to add to the capacity of international bandwidth. This is essential to address data traffic problems and to enhance user experience while surfing the Internet. For instance, Light Submarine Cable System links Malaysia directly to Japan and Hong Kong.

ACHIEVEMENT OF BUSINESS OPPORTUNITIES UNDER THE CCI NKEA

......

In addition to existing projects under each of the EPP, there are also business opportunities under the CCI NKEA that can contribute RM11.7 billion to the Gross Domestic Production, such as fixed line services, mobile services, and regional as well as postal, courier and broadcasting. Fixed line services have seen a 2% increase or RM200 million in revenue, while the number of subscription for mobile services has witnessed an impressive growth during the third guarter of 2011, with penetration rate reaching 124.7%, equivalent to 35.7 million subscriptions. Out of this amount, a total of 10 million users subscribe to 3G mobile services.

Postal and courier services have also introduced Ta-Q-Bin, a new courier service from Japan. Malaysian companies in the Content, Communication and Infrastructure such as Axiata, Maxis and Astro will continue to look at rapidly growing international markets like Indonesia, India and Bangladesh. Until today, all of the companies are strengthening their operations and will contribute to the national economy through the profits earned from their regional operations.

CCI NKEA CONTRIBUTIONS TO THE COMMUNICATIONS AND MULTIMEDIA INDUSTRY

CCI NKEA has significantly improved the country's level of communications and multimedia. With the USP initiatives, broadband coverage has been expanded, thus increasing the country's broadband penetration rate. Improving the delivery system and the online government communication through secure communication channels have also helped the public to perform government services efficiently and not limited to a particular device. Government Transformation Programme (GTP) and Economic

Figure 6 Achievement of business opportunities

Transformation Programme (ETP) are working together and have managed to improve infrastructure in rural areas by providing basic amenities, including water, electricity, roads and telecommunications facilities and broadband services to everyone.

The application of more advanced technologies especially in the creation and delivery of creative content and electronic commerce has strengthened the country's total domestic value added. In addition, the introduction and use of new technologies and applications such as tele-presence and tracking system using Radio-frequency Identification

(RFID), development of new channels are also seen as a measure to improve efficiency in management.

......

With the continuous efforts between MCMC and the industry, Malaysia is on its way to becoming a more connected, educated and culturally competent nation. Through this, we are able to realise the goal of turning Malaysia into a high-income nation by 2020.

MOBILE SERVICES FIXED LINE SERVICES POSTAL AND COURIER SERVICES 124.7% or 35.7 million SUBSCRIPTION OF CELLULAR SERVICE (Q3 OF 2011) 10 million SUBSCRIPTION OF 3G SERVICES (Q3 OF 2011) ACHIEVEMENT OF BUSINESS OPPORTUNITIES

Use: Digital Home Multimedia

- Trials with "Greenfield" suppliers
- "HomeHealth" pilot project
- "GreenHome" pilot project

Stimulus: Stimulate growth by focusing on SME Exhibition and Conference

- Digital Housing
- Consumer Study
- Digital Housing Bulletin
- Establishment of SME Clusters and MAHA

Figure 7 Digital Housing Framework

DEVELOPMENT AND APPROACH TO THE CONCEPT OF DIGITAL HOUSING

All initiatives related to broadband and ICT will support the social and economic growth of the country, improve quality of life and create a greater level of competitiveness globally. The plan to realise a "digital lifestyle" can also be achieved by meeting the target of 65% broadband penetration rate by 2012.

MCMC has introduced digital housing framework 2011-2013 through a catalytic cycle of research, development, production, manufacture, awareness, promotion and acceptance of digital home concept and alternative technologies. By referring to Figure 7, the framework will be developed through three main

elements: the development, use and stimulation. One of the initiatives introduced in 2011 through the framework and under the core "Use" or "Penggunaan" is a pilot project themed Connected Home Healthcare (CHH). This new approach of health care from home provides the opportunity for physicians to monitor and analyse data and information based on geographical, social and cultural differences, as well as reducing the gap between the services and the needs of patients in hospitals, by connecting them directly to the hospital through a platform installed in patients' homes. In addition, the application of this technology will help to improve the medical services, care management and at the same time guarantee a positive and proactive relationship. In providing a comprehensive approach, two concepts have been

proposed in rural and urban areas. E-health services will be based at the Community Broadband Centre in rural areas and private residential premises in urban areas.

DIGITAL VILLAGE INITIATIVE FRAMEWORK

The Digital Region initiative was launched and led by MCMC in 2010. The building block approach was adopted in its implementation. Pekan, Pahang was chosen as the first district and as a benchmark; followed by Pagoh and Jempol. The strategy is executed by combining all districts to form a Digital State which will eventually combine to develop a Digital Nation.

This programme incorporates the existing initiatives together with new initiatives that will be implemented in an area. Figure 8 shows the concept

of the target block approach to achieve the Digital Nation status. In order to gain benefit from the initiatives, the Digital Village concept was also introduced in district region to create a sustainable ecosystem.

The Digital Region programme shall give focus to the foundation that extends to the broadband services in terms of digital and wireless technology offerings. This Digital Village initiative also aims to promote a beneficial environment that can support effective knowledge-learning sessions and experience through CBCs.

DEVELOPMENT AND BASIC CONCEPTS OF DIGITAL VILLAGE

Referring to the Figure 9, Digital Village's implementation will cover the following key aspects:

VALUE CREATION

This shall cover the development and delivery aspects of the content to promote and realise the demand for the local digital growth and opportunities through high quality access and affordability. It covers community outreach programmes and assistance from professionals of various fields, such as agriculture, health and education. The main driving force for realising value creation for sustainable economic ecosystem in rural areas is through digital empowerment.

SUSTAINABILITY

This concept aims to transform the CBC into a self-sustaining centre by fostering and nurturing the capabilities of the CBC.

QUALITY OF LIFE

......

This aspect will create new social and economic opportunities for the community through ICT empowerment, developmental programmes for people living in rural areas, health and maintenance support and place to store learning materials that can improve their qualities of life.

AN APPROACH TO DIGITAL VILLAGE INITIATIVE

Based on smart and strategic collaborations between interested parties in the communication field the Government, public and private sectors together with MCMC, the Digital Village initiatives will see the alignment of all new initiatives from various stakeholders such as MDeC. GSIAC, EPU, PEMANDU and all related parties, as can be referred on Figure 10. In developing a comprehensive ecosystem, initiatives related to the development of the Economic Transformation Programme (ETP) and the Government Transformation Programme (GTP) should also strengthen the economy status of people living in rural areas. The role of MCMC through CBC, KTW, communication towers and the distribution of 1Malaysia Computer can support the Rural Transformation Programme (RTP) through this ecosystem. The exposure and the effectiveness of these RTP measures would also attract investments from private sectors, thus creating employment opportunities which can encourage the younger generation to return to their hometowns and work there.

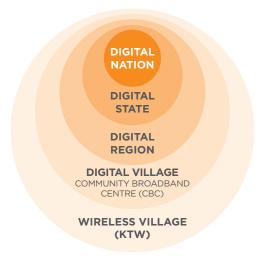

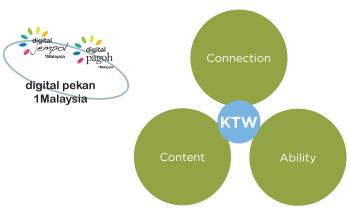

Figure 8 Target block approach to achieve the Digital Nation

TRANSFORMATION OF THE RURAL ECONOMY THROUGH THE NATIONAL BROADBAND INITIATIVE

3 main thrusts:

- The creation of value
- Sustainability
- Improved quality of life

EXTENDING REACH THROUGH WIRELESS VILLAGE

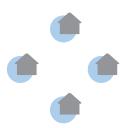

Wireless Village Execution Module

SuperWiFi/3G/ WiMax/LTE Zones

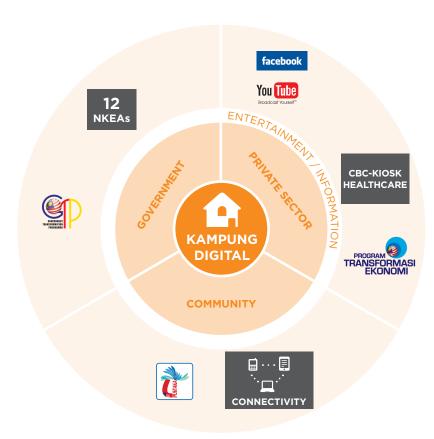

HotSpot Zones

RESULTS

- Empowering local entrepreneurs through ICT
- Increase the combination of various stakeholders
- Increasing GNI/GDP through the locals' creativity and productivity
- Extending the reach of rural and urban communities
- · Bridging the digital divide
- Improve rural communication infrastructure

Content **Development**

The functions and roles of the Content and Industry Development Department are in line with the national policy objectives for the communications and multimedia industry as follows:

- a. To establish Malaysia as a major global centre and hub for communications and multimedia information and content services.
- b. To grow and nurture local information resources and cultural representation that facilitate the national identity and global diversity.

NETWORK CONTENTS FRAMEWORK

Objectives:

- a. To establish Malaysia as a major global hub for content services.
- b. To stimulate demand for Malaysian content at the local and international level.
- c. To manage Networked Content Development Grant.
- d. To create and implement development plan for network development industry for the next five (5) years.

Focus:

- a. Documentary
- b. Animation
- c. Original Format Programme
- d. Interactive Programme for Children
- e. Nation Building Programme (1Malaysia)
- f. New Media

Implementation Strategies:

- a. Incentives
- b. Capacity Development
- c. Policy and Regulation
- d. Exploring the global market

Development Scopes:

- a. Mobile Telephone Communication
- b. Broadcasting
- c. Internet

Target:

a. Malaysian companies ranging from small and medium enterprises (SMEs) with at least 51% local shareholding.

Implementation Strategies:

- a. Incentives
- b. Capacity Development
- c. Policy and Regulation
- d. Exploring the global market

CONTENT DEVELOPMENT **INCENTIVES**

MCMC CREATIVE INDUSTRY DEVELOPMENT FUND (CIDF-MCMC)

MCMC has allocated RM100 million for CIDF-MCMC for a period of 3 years (2011-2013) which focuses on the development of television content, mobile content and Internet content. The purpose of this provision is to develop creative local content industry in line with the aspirations of national policy under the Communications and Multimedia Act 1998, which aims to make Malaysia a global hub for content development. Network Content Development Grant (NCDG), which was established in 2007 in accordance with MyICMS Blueprint (2006-2010) expired at the end of 2010 and the remainder of the grant funds have been absorbed into CIDF-MCMC.

The objective of CIDF-MCMC is to facilitate and encourage Malaysians to get involved in the creation and publication of creative, original, innovative and worldclass multimedia content. This incentive strives to stimulate the development of the local creative industry, which eventually will drive the growth of our economy.

Table 1 shows the status of CIDF-MCMC as at 31 December 2011.

NO	DESCRIPTION	MICC'S AGENCY	NO. OF COMPANIES	TOTAL FUNDS APPROVED (RM)
1	CIDF-MCMC Projects under MCMC	MCMC	10	7,653,808.50
2	i. Strategic collaboration to develop TVi Content	RTM	26 (30 projects)	10,000,000.00
	ii. Nation-building Reality Programme iii. Bakat i (Sabah & Sarawak)	RTM RTM	1 -	1,000,000.00 100,000.00

9	Financial Help for Creative Industry	Kraftangan Malaysia	a -	500,000.00
	Total		77	35,903,808.50

Table 1 Status of CIDF-MCMC Fund in 2011

As of 31 December 2011, the CIDF-MCMC fund had been approved for 77 companies, amounting to RM35,903,808.50. The projects were collaborative projects between MCMC and MICC's Agencies based on CIDF-MCMC process conducted by MCMC. The details of these projects are as follows:

A CIDF-MCMC PROJECTS UNDER MCMC'S SUPERVISION CIDF-MCMC applications received by MCMC were thoroughly assesed and later approved by two committees, namely CIDF-MCMC Business and Technical Committee (DBTC) and the Management Committee. DBTC is a committee consisting of representatives from departments and agencies under the MICC, content experts appointed by local broadcasters and telecommunication companies as well as other agencies with experience in management of government funds.

The main role of DBTC is to evaluate and make recommendations to the project submitted by the applicants in terms of funds, the potential of business and the technicalities of the technology. The proposal will then be forwarded to the Management Committee for approval. The Management Committee will make a final decision on the approval of grants that are consistent with the objectives and aspirations of CIDF-MCMC based on National Policy CMA 98.

In 2011, a total of 44 applications were received by MCMC with 30 companies receiving invitation from MCMC for 'pitching'. The Management Committee approved a total of 10 projects that will be developed by 10 companies with a total approved fund of RM7,653,808.50.

B STRATEGIC COLLABORATION TO DEVELOP TVI RTM Strategic collaborations between MCMC and Agencies under MICC for interactive TV channel, TVi are as follows:

Strategic Collaboration to **Develop TVi RTM Content**

Under the strategic collaboration programme to develop relevant content in Sabah and Sarawak, a total of 140 companies had been invited for 'pitching' under RTM from 25 to 29 July 2011. The 'pitching' sessions were held simultaneously at three locations -Kuala Lumpur, Kota Kinabalu and Kuching.

This strategic initiative to develop content for TVi has been given to 26 companies that will develop 30 projects on channel TVi RTM.

Nation-building Reality Programme

For the Nation-building Reality Programme, a total of 10 companies had been invited to the 'pitching' under RTM on July 18, 2011. During the 'pitching' sessions, TV Shows Evaluation Committee of MICC had selected the company with the highest mark with the title 1Malaysia Generation as the winner. The title of the programme has now been changed to Young Historians to give more impact to the target audience.

Bakat i

Bakat i was a collaboration between MCMC and TVi RTM Commission, National Visual Arts Gallery, Arts Culture and National Heritage (ASWARA) and professional artists. It was based on the folklore and legendary animal characters in Sabah & Sarawak painting competition which also involved scenery paintings. The programme was open to all Malaysians aged 15 to 35 years.

A total of RM99,824 worth of sponsored donation gifts were awarded on 7 December 2011 by MCMC to 8 finalists (including RM30,000 for the champion, RM20,000 for the runner-up and RM10,000 for third place), trophies and certificates (RM9,824) and five consolation prizes for viewers at home.

C PATRIOTIC DOCUMENTARY
SPECIAL PROGRAMME
The Patriotic Documentary
Special Programme is a strategic
collaboration project between
MCMC and the National Film
Development Corporation
Malaysia (FINAS) to develop a
patriotism-themed documentary
related to history, such as
historical figures, historical
sites and the study of historical
events. For this initiative, MCMC
has allocated RM5 million to
FINAS from the CIDF-MCMC.

A total of 142 companies had been invited to the 'pitching' run by FINAS from 27 to 30 September 2011. For the second pitching, 37 companies were selected to present on 15-16 December 2011 before being shortlisted. The fund will be offered to 20 companies.

D PATRIOTIC ANIMATION SPECIAL PROGRAMME
For this strategic collaboration between MCMC and the Department of National Film Malaysia (FNM), MCMC has allocated RM5 million of the CIDF-MCMC to develop animation with patriotic messages and to focus on the content on history such as historical figures and historical events.

41 proposals from 32 companies were received and invited to the 'pitching' conducted by the FNM from 26 to 28 September 2011.

- From the pitching, a total of 10 companies had been approved to receive the CIDF.
- E 7 LOCAL ANIMATION PROJECTS
 Seven companies were offered
 CIDF-MCMC with a total funding
 of RM5 million to develop
 animations with local content.
 The content will be based on
 1Malaysia concept, folk, humor,
 elements of conflict and a
 display of interesting events.

CAPACITY DEVELOPMENT

MCMC GRANT FOR INNOVATIVE & CREATIVE CONTENTS & APPLICATIONS (MAGICCA)

MCMC Grant for Innovative & Creative Contents & Applications (MaGICCA) is offered specially to students in higher education institutions (HEIs) to develop projects related to high quality and potential content and application to be commercialised. MCMC will conduct a pilot project in Multimedia University (MMU) with a budget allocation of RM1 million for its first year. MaGICCA will be extended to all higher education institutions in Malaysia the following year if the pilot project in MMU receives encouraging response.

In addition, MCMC has also undertaken a number of initiatives in content development capacity. Among them is organising a competition to foster interest on content development among high school students in conjunction

with the Independence Day celebration. A competition to develop a Merdeka video with the theme "ICT and Independence" was conducted. The competition received overwhelming responses from high school students from across the country with a total of 1,282 entries. MCMC also organised online games in places like Felda Chemplak Barat, Sandakan, Tawau, Papar and Lahad Datu.

......

MCMC together with Post Production Animation and Creative Content Association Malaysia (POSTAM) organised the International Conference on Creative Content in 2011 on 27 September 2011. This conference is one of the many efforts to promote and expand the involvement of artists to produce competitive and marketable content locally and abroad. The presence of international speakers also created opportunities to exchange ideas among art activists to develop local content and learn the technical aspects of creating it.

In the effort to develop human capital capacity in animation and multimedia content industry, MCMC has donated RM25 million to ASWARA to establish the Digital Animation and Multimedia Laboratory. This proactive effort intends to nurture the talent, creativity and skills in the content industry. This will hopefully create a positive impact on the country's creative multimedia content industry.

ASWARA will offer courses such as a Bachelor of Animation (2D), Bachelor of Animation (3D), Bachelor of Motion Graphic and Bachelor of Visual Effects. According to ASWARA, this effort is expected to produce a total of 120 highly skilled graduates each year with an estimated of 30 students in each course. This strategy is in line with the government's aspiration in becoming a high-income country based on skill, creativity and innovation.

MCMC also organised collaborative efforts such as:

Workshop Title	Collaboration
Video Creating Workshop	MCMC/ MICC
International Film and Video Seminar	MCMC/ PROFIMA/ MIDA/FINAS
Animation Workshop	MCMC/ ASWARA

EXPLORATION OF GLOBAL MARKET

MCMC has been collaborating with government agencies such as FINAS, MDEC and local companies to generate export earnings of local content through global exploration together as a measure to catalyse the development of local content. For this effort, MCMC has brought local companies to the international arenas such as MIPTV, MIPCOM, Hong Kong Film Mart and Asia Television Forum (ATF).

In April 2011, MCMC became one of the leading organisers to bring Malaysian companies to MIPTV 2011 in Cannes, France to sell contents and seek international partners. MIPTV is an annual event organised by Reed MIDEM. It is the largest media centre in the marketing world which involves joint ventures, purchase, sale, investment and distribution of content across all platforms. With the presence of more than 11,500 participants and 4,000 companies/agencies from 100 countries, MIPTV is the right place for local producers to meet and engage with reputable buyers from Europe, America and Asia. The participation has generated foreign investments worth RM13 million with RM2 million sales on local content. (Source: FINAS)

MCMC, together with FINAS also participated in MIPCOM 2011 in October 2011 held in Cannes, France. The collaborative sponsorship has brought local companies to tap

the international market. Similar to MIPTV, MIPCOM is the centre of joint ventures, purchase, sale, investment and distribution of content across all platforms. RM90.73 million worth of total foreign investment was generated, while sales transactions for local content were valued at RM22.36 million. (Source: FINAS)

In addition, MCMC also brought local companies to participate in the Hong Kong Film Mart 2011. 5,073 participants from 54 countries attended the event. Malaysia managed to bring back foreign investments worth RM29.7 million with content sales of RM0.164 million from this participation. (Source: FINAS)

At the Asia Television Forum (ATF) 2011 held in Singapore, the total of investments and sales made were recorded at RM7 million. (Source: FINAS)

POLICY AND REGULATORY

2011 was a pivotal year for the development of content when the National Creative Industry Policy (DIKN) was approved by the Cabinet on 12 November 2010 and was officially launched at a larger scale by the Minister of MICC. The launch event was held at the Malaysia Craft Complex on 21 October 2011. The launch of DIKN will meet the needs of industry in supporting the development of the multimedia industry, culture and cultural heritage.

Consistent with DIKN, among the major initiatives related to this policy are Malaysia Content Definition Guidelines that have been brought forward to MCMC in October 2011. These guidelines are provided to guide the content industry players, policy makers, broadcasters and telecommunications companies in developing, promulgating and regulating content in Malaysia. MCMC's active role in realising the implementation of DIKN and drafting of the DIKN Action Plan and Guidelines Definition Content Malaysia has managed to increase MCMC's credibility and image as one of the leaders in the development of content industry in Malaysia.

ASIA

Digital **Transition**

THE NATIONAL BROADCASTING **DIGITALISATION PROJECT**

Digitalisation of the broadcasting industry is a transition process from analogue to digital technology and is happening all over the world following the merger of ICT and multimedia in broadcasting technology.

It is a global phenomenon where the analogue broadcasting technologies are expiring soon which makes the maintenance and purchase of equipments and spare parts for analogue broadcasting increasingly expensive and uneconomical.

Most of the developed countries around the world have already started broadcasting Digital TV and discontinued the usage of analogue broadcasting, as shown in Figure 11. With the closure of analogue TV broadcasting, the excess spectrum released by analogue broadcasters can be allocated for new services which can be enjoyed by the public.

In Malaysia, the digital satellite TV broadcasting began with ASTRO in 1996, followed by Broadband services and Internet/paid WebTV such as FineTV and HyppTV. However, the broadcast of free channels such

as RTM, Media Prima (TV3, NTV7, 8TV and TV9), TV Al-Hijrah and WorldView Broadcasting Channel (WBC), which provide free broadcast (Free-to-Air) still use analogue broadcast technology.

......

National broadcasting digitalisation projects in Malaysia have been initiated since 2002 and divided into several phases, namely the introduction of the concept, research, testing and preparation of framework which involves broadcasters and the broadcasting industry as a whole.

||| DIGITAL BROADCASTING STARTS

ANALOGUE OFF

AMERICA EUROPE '03 ITALY/NETHERLAND III © '07 NETHERLAND IIIIIIIII © '12 ITALY IIIIIIIII >>

Figure 11 Data on discontinuition of analogue broadcasting and beginning of digital broadcasting

BENEFITS OF DIGITAL BROADCASTING

Analogue broadcasting uses a lot of spectral bands (7 or 8 Megahertz) from the total spectrum to broadcast a single TV channel. With digital broadcasting technology, a spectrum of the same thread can accommodate up to 10 digital TV channels.

Thus, people can enjoy more channels, while enjoying interactive and new applications at the same time such as T-commerce, T-info, T-newspapers and various channels of information to narrow the digital gap.

The quality of service is also improved as the transmission of digital TV channels using satellite platform is still reliable during bad weather.

TV needs more channels to open up opportunities for Government and industry to increase the production of local content to meet the preferences of people from all walks of life and foster the spirit of 1Malaysia.

The need and demand for more TV channels have opened up the opportunities for Government and the industry to increase the production of local content that can fulfil people from all walks of life, encouraging the spirit of 1Malaysia.

As spectrum is a scarce resource, the digitalisation of free TV channels will allow for more spectrums to be allocated for the purpose of providing new services to the people.

METHODS AND IMPLEMENTATION OF POLICY

In 2011, MCMC has continued the planning of national digitalisation project by refining the policies and methods of implementation and reviewing of standards and Digital Terrestrial TV broadcasting technology.

National Economic Council in April 2011, has agreed, among other things, that the allocation of spectrum would give priority to free-to-air broadcasters until the closure of analogue broadcasting services. Assignment of spectrum to paid broadcasters will be considered after the closing of analogue broadcasts.

National Economic Council has also agreed with the method of digital TV broadcasting infrastructure through the appointment of a single infrastructure provider (Common Integrated Infrastructure Provider (CIIP)) that will build, operate and own the infrastructure, from the private sector. CIIP will then lease digital TV platform capacity to Government and all private broadcasters within the specified time frame.

This method of sharing digital TV transmission and broadcasting hub infrastructure between broadcasters would provide savings to the broadcasters, compared with the method in the analogue era. From this method, broadcasters no longer need to invest too much on purchasing and maintaining digital TV transmission equipments. These savings can be used for research and development of content and applications.

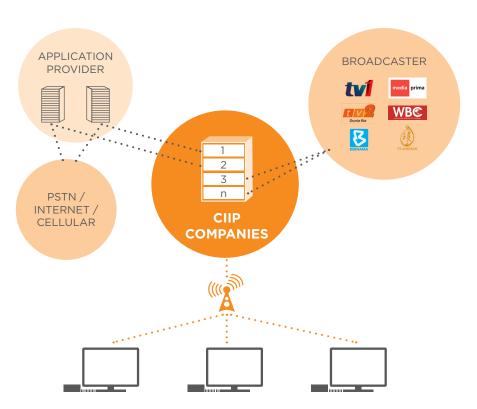

Figure 12 Infrastructure sharing by broadcasters through a single infrastructure provider

REVIEW ON STANDARD FOR DIGITAL VIDEO BROADCASTING-TERRESTRIAL (DVB-T)

In line with the technological developments around the world, MCMC has revised the standard for Digital Video Broadcasting-Terrestrial (DVB-T), which was set in 2006. Standard Digital Video Broadcasting-Terrestrial 2 (DVB-T2) is identified as the standard to be adopted in Malaysia as DVB-T2 is a robust technology and offers more capacity and is suitable for broadcasting high-definition (HD) and 3-Dimensional (3D).

MCMC in April 2011 has mobilised two industry working groups under the supervision of Malaysian Technical Standards Forum Berhad (MTSFB) to revise the standard DVB-T to DVB-T2 and the technical specifications for (set top box) digital terrestrial TV broadcasting, which also covers terrestrial Integrated Digital TV (iDTV).

Mandatory standard DVB-T2 was registered in December 2011 and can be found on the MCMC website, while standard terrestrial digital broadcast receiver is expected to be registered in the second quarter of 2012.

TRIAL BROADCASTS FOR DVB-T2

MCMC has worked with the Asia Pacific Broadcasting Union (ABU) and other key broadcasters such as RTM, Rohde & Schwarz, Media Broadcast and the DVB organisation itself to study and perform trials on DVB-T2 standard in March 2011, in conjunction with ABU Symposium in Kuala Lumpur. Participated by 100 participants from inside and outside the country, this study was conducted in the vicinity of Kuala Lumpur where digital TV transmitter with 600 watts of power was installed to widen the broadcasting coverage in Klang Valley.

The study concluded that coverage has increased by 20%, is more widespread and uses less power while the number of TV programmes that can be broadcasted has increased between 30% and 40%, with up to 10 standard definition (SD) channels published in the frequency bands, compared to 6 SD channels using the DVB-T standard.

Participants taking the measurements in Angkasapuri, Kuala Lumpur

BROADCASTERS REQUIREMENTS AND READINESS

From July until August 2011, MCMC underwent consultations with broadcasters in preparing the policy framework and implementation of digital TV broadcasting infrastructure, an outcome from the National Economic Council.

MCMC also recognises the need of the broadcasters to include the numbers of new digital TV channels, target, and regional broadcast coverage area. All of these requirements have been included as part of the requirements in the RFP.

Until the end of 2011, the Government and all private broadcasters have been equipped with digital studio broadcasting equipment which includes the publication, recording and broadcast on the air.

EARLY EXPOSURE

To give early exposure to the industry in digital terrestrial TV broadcasting, MTSFB conducted a one-day seminar held at the Commission Headquarters on June 27, 2011. The seminar featured experienced speakers from inside and outside of the country where they shared information and experience in conducting the digitalisation of broadcasting to participants of the stations broadcasters, suppliers and manufacturers.

WITHDRAWAL OF TAX EXEMPTION TO PURCHASE EQUIPMENT AND BROADCASTING SYSTEM

Exemption period for the industry and broadcasters to purchase equipment and broadcasting system had expired in June 2011. To support the transition from analogue to digital broadcast which will cost a considerable amount in many years to come, MCMC together with MIDA gave the green light to carry on with this tax exemption. This measure is also important to ensure the healthy growth of the broadcasting sector.

THE NEXT STEP

MCMC will be appointing the new CIIP at the end of 2012. With the appointment of CIIP, the construction of broadcast transmission infrastructure can be implemented throughout Malaysia. People can expect to enjoy digital terrestrial TV broadcasts in 2013 for Klang Valley, followed by major cities across the country. Digital terrestrial TV coverage is expected to be enjoyed by 98% of the population by 2015.

Enriching Lives & Connecting the World The provision of transparent and comprehensive services has been beneficial to all Malaysians. It allows them to connect to the world, share their knowledge and conduct businesses. DEVELOPMENT

• DEVELOPMENT OF INFRASTRUCTURE & STANDARDS

SPECTRUM POLICY & PLANNINGUNIVERSAL SERVICE PROVISION

Development of Infrastructure and Standards

CERTIFICATION PROGRAMME

The Certification Programme by the Commission is subject to The Communications and Multimedia (Technical Standards) Regulations 2000. Section 186 of the Communications and Multimedia Act 1998 provides the method for MCMC to appoint Licensed Certifying Agencies to conduct a certification programme on behalf of MCMC. Until 31 December 2011, four organisations have been appointed as the MCMC's Licensed Certifying Agencies, which are shown in Table 2.

NO	ORGANISATION	CATEGORY	DATE OF APPOINTMENT
1	SIRIM QAS International Sdn Bhd (SQASI)	Certification for communication equipment	3 September 2003
2	Akademi Laut Malaysia (ALAM)	Certification of competence in skill areas designated for maritime radio operator	3 September 2003
3	Telekom Multimedia College (TMMC)	Certification of competence in skill areas designated for other than radio operator (cabling provider)	15 July 2002
4	Universiti Malaysia Terengganu (UMT)	Certification of competence in skill areas designated for maritime radio operator	1 March 2011

Table 2 Organisations appointed as the Licensed Certifying Agency by MCMC

MCMC also conducted its own competency certification programme in skill areas for amateur radio operators for Class A and Class B. Total certification issued in 2011 by the Commission and registered certification agencies are shown in Table 3.

The total number of certificates issued in the year 2011 amounted to 10,754, an increase of 12.8% compared to 2010, amounting to 9,537.

NO	CERTIFYING AGENCY	CATEGORY	TOTAL
1	MCMC a. Amateur Radio Operator (Class A) b. Amateur Radio Operator (Class B)		31 1,330
		Total	1,361
2	SQASI	a. Communication Equipment (Telephony) b. Communication Equipment (Radio)	325 1,698
		Total	2,023
3	ALAM	a. AM Operator Certification (GOC)b. Restricted Operator Certification (ROC)	1,091 144
		Total	1,235
4	TMMC	a. Cabling Provider (New Issuance)b. Cabling Provider (Renewal)	4,778 1,345
		Total	6,123
5	UMT	a. AM Operator Certification (GOC)	12
		Total	12
		GRAND TOTAL	10,754

Table 3 Number of certifications issued by the certifying agency

STANDARD DEVELOPMENT

In accordance with the provisions of the Communications and Multimedia Act 1998 (CMA 1998), MCMC has registered the Malaysian Technical Standards Limited (MTSFB) as the Industry Forum, beginning on the 27th of October 2004. MTSFB is responsible for developing the Voluntary Industry Code covering interoperability and security aspects of network facilities.

In 2011, MTSFB has developed a number of documents consisting of technical standards, technical specifications and guidelines that have been submitted to MCMC for registration. The documents are shown in Table 4.

NO TITLE OF DOCUMENT Guideline on IPv6 Implementation and Compliance Test Technical Specification for Direct to Home Satellite Receiving Antenna Technical Specification for Direct to Home Satellite Receiver 3 Technical Specification for Analogue Calling Line Identity Presentation Facility for Connection to Public Switched Telephone Network (revision to SKMM FTS P ACLIP Rev. 1.01:2007) Technical Specification for Private Automatic Branch Exchange System for Connection to Public Switched Telephone Network (revision to SKMM FTS P PABX Rev. 1.01:2007) Technical Specification for Digital Terrestrial Television Receiver 6 (revision to SKMM WTS STB-FTA Rev. 1.01:2008) Technical Standard for Compression Table of Service Information Descriptions for Digital Television Broadcast Service Technical Standard for Middleware Profile of Digital Television **Broadcast Service**

Table 4 List of documents submitted

In addition, the MTSFB is also developing a number of standard documents that are expected to be completed in 2012. Among them are:

NO	TITLE OF DOCUMENT
1	Technical Specification for Terminal Equipment for Connection to Public Switched Telephone Network
2	Technical Standard of In-Building Fibre Cabling For Fibre-to-the-Premise
3	Technical Specification for Short Range Devices (Revision to SKMM WTS SRD Rev 1.01:2007)]
4	Technical Specification for Broadband Wireless Access Equipment (Revision to SKMM WTS BWA Rev 1.01:2007)
5	Technical Specification for GSM Mobile Terminals (Revision of SKMM WTS GSM Rev 1.01:2007)
6	Technical Specification for IMT-2000 Third Generation (3G) Cellular Mobile Terminals (Revision to SKMM WTS IMT-MT Rev 1.01:2007)]
7	Technical Standard for Asymmetric Digital Subscriber Line (ADSL) Transceivers (Revision to SKMM FTS ADSL Rev 1.01.2007)"
8	Technical Standard and Infrastructure Requirements (TSIR) - Part 4: Radiocommunications Network Infrastructure (Internal)
9	Technical Standard on Green ICT Work Practices
10	Technical Standard for Internet Protocol Television

SEMINARS

SEMINAR ON COMPLIANCE IN
CERTIFICATION REQUIREMENTS
FOR COMMUNICATIONS EQUIPMENT
UNDER THE COMMUNICATIONS
AND MULTIMEDIA ACT 1998

A total of two compliance seminars were successfully held in year 2011. The seminar was jointly organised by SIRIM QAS International Sdn Bhd (SQASI), which is a Licensed Certification Agency for MCMC.

The seminar, entitled

"Communications Equipment Under CMA 98" aimed to create awareness amongst manufacturers, importers and distributors regarding the legal requirements and procedures that must be observed for certifying communications equipment before it can be marketed in the country.

Details of both the organisation of the seminar are shown in Table 6. Due to overwhelming response, MCMC will continue organising similar events aside from holding road shows throughout the country, as a measure to expand it to various target groups of consumers in 2012.

(SAR) AND FREQUENCY
ELECTROMAGNETIC
FIELDS (EMF)

announced the enforcement of
compliance regarding the Spec

COMPLIANCE SEMINAR ON

SPECIFIC ABSORPTION RATE

On 20 October 2011, MCMC has announced the enforcement of compliance regarding the Specific Absorption Rate (SAR) and Frequency Electromagnetic Fields (EMF) for all communications equipment. The enforcement began on 2 November 2011.

With such enforcement, all radio communication equipment such as mobile phones and two-way radios must be made to comply with the limits set before being issued with certification by SQASI. Such a requirement is one of the MCMC initiatives to ensure the communications equipment complies with international standards and guidelines on the SAR and EMF towards protecting the health and safety of people.

MCMC and SQASI also organised a technical lecture titled 'Understanding on Specific Absorption Rate (SAR) and EMF Exposure Requirements for Equipment Certification' at MCMC's Auditorium, Cyberjaya. The lecture was presented by Michael Milligan, the Secretary for the Mobile Manufacturers Forum (MMF).

NO.	DATE	VENUE

PUBLIC AWARENESS SEMINARS

Some of the seminars and public awareness programmes organised by MCMC and MTSFB in the year 2011 are shown in Table 7.

EVENT / SEMINAR NO

- MCMC Tecnolab X'change "Enhancing Property Value via Fibre Optics Broadband". This seminar was held on January 19, 2011, and was a joint effort between MCMC and Leader, assisted by MTSFB..
- 2 Smart Networks Seminar was held on March 24, 2011. The seminar was jointly organised by the MCMC and MTSFB and supported by Performance Management and Delivery Unit (PEMANDU).
- 3 World IPv6 Day Seminar was held on 8 June 2011. It was jointly organised by MCMC and MTSFB, with support from the Ministry of Information, Culture and Communications, Administrative Modernisation and Management Planning Unit (MAMPU) and 'The Internet Society (ISOC)'.
- Digital Terrestrial Television Broadcast Seminar was held on 27 June 2011. This seminar was jointly organised between MTSFB and MCMC.
- 5 Importance of Standards and Migration to Smarter Network & Greener Technology Seminar was jointly organized by the MCMC and MTSFB in collaboration with the Telecommunication Technology Committee (TTC), Japan on October 12, 2011.

Table 7 Public Awareness Seminar organised by MCMC, MTSFB and the industry

HSBB

Until 31 December 2011, Telekom Malavsia (TM) has exceeded its target of 1,145,987 premises passed by hitting 1,165,758. The premises involved 81 exchanges in areas depicted in Table 8.

In terms of expenditure, TM has spent more than RM4.801 billion as of 31 December 2011. As agreed on the Public-Private Partnership (PPP) Agreement signed on 16 September 2008, the Malaysian Government has made a payment of RM2.26 billion as of 31 December 2011.

NO	AREA	NUMBER OF PREMISES
1	Klang Valley	1,077,520
2	Wilayah Persekutuan	39,008
3	Penang	25,248
4	Kedah	9,222
5	Perak	3,936
6	Negeri Sembilan	5,632
7	Malacca	5,192

Table 8 Number of premises passed in 2011

AMENDMENT OF LAWS PROVISIONS 25 UNIFORM BUILDING (UBBL) 1984

In May 2011, the National Council for Local Government has agreed to the proposed amendments to the provisions of the Uniform Building By-laws 25 (UBBL) 1984, approved by the Cabinet in November 2010.

The broadband penetration rate in new development areas can be increased by making communication facility a compulsory in new developments. With the availability of this provision, new developments should provide the basic telecommunication infrastructure to facilitate service providers in giving services to the residents. To implement this decision, MCMC is working with Kuala Lumpur City Hall to identify the processes, procedures and the necessary documents as a condition of issuance of completion and compliance (CCC).

To execute this, the developer is obligated to provide the communication infrastructures and equipments, including manholes and mains (internal and external) and cables (internal) according to the specifications and standards.

RF/EMF RADIATION SAFETY

MCMC is responsible for managing issues related to radiation safety/ EMF at the national level. Thus, MCMC has partnered with the Malaysian Nuclear Agency to assess the compliance level of communication transmitters with the RF radiation levels. A total of 124 RF radiation testings were conducted throughout the country in 2011.

A series of radiation safety awareness forums were held in collaboration with MCMC's regional offices MCMC. This forum is intended to convey accurate information on RF radiation emitted by the tower and transmitter

communication infrastructures as well as to correct the misconception regarding the effect of RF radiation on human health and safety.

For the first time, the forum highlighted the achievements of the world's leading scientists in the field of radiation safety/ EMF, Dr. CK Chou, who has over 40 years of experience in the study of the impact of biological, medical applications and exposure standards and measurement of electromagnetic energy. Dr Chou is also the Chairman of TC 95, Electromagnetic Safety International Committee of the Institute of Electrical and Electronics Engineers (IEEE), based in the United States.

EPP BROADBAND FOR ALL (BROADBAND FOR ALL) UNDER NKEA

MCMC has led EPP Broadband for All (BBFA) under the NKEA Content, Communications and Infrastructure (CCI), and strives for improved regulatory framework in coordinating communications infrastructure construction needs. Under the EPP BBFA, several initiatives have been carried out:

- 1. Industry focus groups aimed at identifying the technical requirements for the provision of communications infrastructure industry, including fixed and wireless.
- 2. Regulatory focus group aimed at updating and identifying regulatory requirements to enable the communication infrastructure is built.
- 3. Access focus groups aimed at identifying the steps necessary to enable the sharing of fixed infrastructure such as mains where it will accelerate the construction of new infrastructure such as fibre optics and become more economical.

CONNECTED@KL

One of the projects identified under CCI NKEA is Connected@KL, a project aimed at improving the use of and access to broadband facilities in Kuala Lumpur. With the cooperation of the Kuala Lumpur City Hall (DBKL), food premises under DBKL governance are required to provide internet access via Wi-Fi technology for the convenience of visitors and customers.

A survey involving almost 1,000 food premises in Kuala Lumpur was conducted in 2011 to determine the level of availability and to obtain an accurate picture before implementing the plan.

Terms of Wi-Fi installation were first enacted for new application and renewal of premise licences by the City Hall for in 2012 and involved food premises with an area of 120 square metres or more.

EXTENSIVE ENDPOINT SERVICE AVAILABILITY TESTING (EESAT)

EESAT, an acronym for Extensive Endpoint Service Availability
Testing is a testing procedure on a cellular network based on Quality of Service Standards Mandatory for cellular services. The two main parameters measured were Dropped Call Rate (DCR) and Endpoint Service Availability (ESA). Mandatory standards for cellular

service quality have set that the DCR shall not exceed 5% and ESA shall not be less than 90%.

Cellular network service quality tests were conducted from 12 May 2011 - 24 June 2011 and involved Celcom, DiGi, Maxis and U Mobile and covered cities and main roads in almost all states in Malaysia except Penang and Perak. The areas involved in the test are shown in Table 10.

STATE	LOCATION
Klang Valley	Kuala Lumpur, Putrajaya, Cyberjaya, Klang, Gombak, Hulu Langat, Petaling, highways in Kuala Lumpur, Karak, Nilai, Seremban, Port Dickson, Smart Tunnel, ERL & LRT Putra

MyIX REPORT

.....

Just 5 years after the First Phase of MyIX was established in Klang Valley, the industry through the Internet Operators Association of Malaysia (MyIX Association) as the operation manager is now able to continue operating without being too dependent on MCMC.

Prior to the handover to the industry, MCMC has helped to finance MyIX's capital expenditure (CAPEX) and operating expenditure (OPEX) for five years since its inception in December 2006.

Towards the end of 2011, MyIX Association membership has reached 43 members. Performances of the annual traffic have increased by an average of 20 times since MyIX began operations as shown in Figure 13.

RESEARCH AND DEVELOPMENT (R&D) MEMORANDUM OF **UNDERSTANDING (MoU) BETWEEN MCMC AND UNIVERSITI TEKNOLOGI MALAYSIA (UTM)**

In order to ensure the development of technology in the industry is in line with the local academic sector, MCMC has established a Memorandum of Understanding (MoU) with Universiti Teknologi Malaysia (UTM). This agreement was signed on July 26, 2011 at UTM and was witnessed by the Minister of Information, Communication and Culture. Dato' Dr. Rais Yatim. The MoU aims to:

- 1 Develop professional skills, enhance their knowledge and skills, and upgrade to expertise level.
- 2 Create a platform to consolidate the collaboration among MCMC, industry and UTM.
- 3 Collaborate in the wireless technology field to drive activities related to innovation and creativity.

- 4 Promote strategic alliances that have been identified, namely:
 - a. Long Term EvolutionTechnology, i.e. the 4G mobile communications technology, which is the continuation of 3G technology.
 - b. Convergence of cellular technology and broadcasting in accordance with the Communications and Multimedia Act of Consolidation.
 - c. IP Multimedia Subsystem line in the cellular network towards Next Generation Network (NGN).
 - d. Wireless Industry emissions, namely research in emissions from transmitters telecommunication structure.

As a result of this MoU, an LTE laboratory was developed at the Wireless Communication Centre (WCC) in UTM Skudai to conduct research and development on this 4G technology. Short courses in 2012 were also planned by MCMC Academy and WCC for MCMC's staff and the industry. This MOU will be carried out for a duration of three years. To ensure that these initiatives will run smoothly, MoU Steering Committee Meetings are held every month.

STRATEGIC TRADE ACT 2010 (STA 2010)

Strategic Trade Act 2010 (STA 2010) came into force on 31 December 2010. It is in line with Malaysia's commitment to the implementation of the United Nations Security Council Resolution 1540 (UNSCR 1540) for the purpose of preventing the proliferation of weapons of mass destruction.

Under the STA 2010, all export and import, transfer activities as well as the brokering of strategic goods (dual-use goods) would require a permit. This includes intangible goods such as transfer of technology electronically across the border.

OTHER AGENCIES INVOLVED

Strategic Trade Controller was appointed to administer this Act and was led by the Ministry of International Trade and Industry (MITI). The Strategic Trade Secretariat was also established to facilitate implementation of this Act.

Apart from MCMC, other licensing agencies involved are the Ministry of International Trade and Industry (MITI), the Atomic Energy Licensing Board (AELB) and the Pharmaceutical Services Division, Ministry of Health (PSD).

1111111111111

The enforcement agencies involved in accordance with the Strategic Trade Act 2010 include:

- 1 Royal Malaysian Customs
- 2 Royal Malaysia Police
- 3 Malaysia Maritime Enforcement Agency
- 4 MCMC

This Act is also supported by the

- 1 Attorney General Chambers
- 2 Ministry of Foreign Affairs
- 3 Disease Control Division, Ministry of Health Malaysia
- 4 Ministry of Agriculture and Agro-Based Industry Malaysia
- 5 Science and Technology Research Institute for Defence (STRIDE)

- 7 Category 6: Sensors and lasers
- 8 Category 7: Navigation and avionics
- 9 Category 8: Marine
- 10 Category 9: Aerospace and Propulsion

*MCMC is tasked to control strategic goods for Category 4 and 5.

IMPLEMENTATION OF STRATEGIC TRADE ACT 2010 IN MCMC

On 21 July 2011, MCMC has put two officers in the Strategic Trade Secretariat (STS) to be exposed to the permit application processes and systems used to acquire the processing permits for Category 4 and 5. STS will process the permits for controlled items under the supervision of MCMC until further notice.

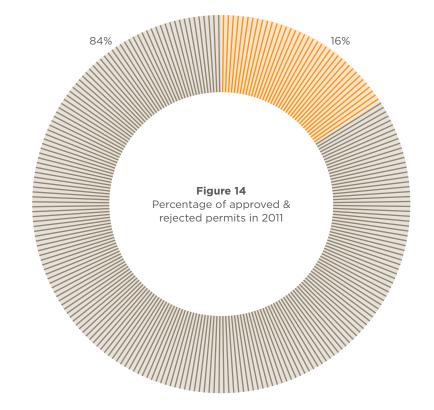

STA PERMIT APPLICATION FOR CATEGORY 4 AND 5

Until 31 December 2011, a total of 382 online permit applications had been received for category 4 involving computers and category involving telecommunications and 'information security'.

CONTROL ON STRATEGIC ITEMS

Control over the items contained in the Order of the Strategic Trade (Strategic Items) 2010 has been developed according to the following categories:

- 1 Category 0: Nuclear materials, facilities and equipment
- 2 Category 1: Special materials and related equipment
- 3 Category 2: Materials Processing
- 4 Category 3: Electronics
- 5 Category 4: Computers
- 6 Category 5: Telecommunications and "information security"

Spectrum Policy & Planning

Radio frequency spectrum involves the coordination between international parties and ITU as well as coordination with satellite systems and terrestrial space. These activities must comply with the Radio Regulations (RR) and the set international frequency by ITU used worldwide. Among the activities conducted during the year 2011 are as follows:

Space Satellite Systems

Space Satellite Systems provide feedback to the demand to carry satellite coordination and interference published by ITU every week. A total of 400 responses to exercise coordination and notification of satellite interference were processed during 2011. The purpose of the feedback is to inform the

relevant countries about frequency interference, coordination between countries on a bilateral basis to reach an agreement to ensure that the relevant satellite network can share a frequency without causing interference to each other.

Satellite Coordination Meeting

Satellite Coordination is the process of determining the frequency at an orbital position and requires close coordination with the satellite frequencies for use in accordance with the rules and regulations set by each administration that can overcome interference problems between nations. Coordination rules are executed in conformity with the resolutions which have been agreed at the Union (ITU). A total of five satellite coordination meetings were held in 2011, as shown in Table 13.

ITU Frequency Registration for Satellite Transmitter Station

18 satellite transmitters have been registered in ITU in 2011.

Registration of Maritime Mobile Service Identity (MMSI) to ITU

Maritime Mobile Service Identity (MMSI) is a system that collects information or data for each registered ship from all around the world. It can be accessed by maritime users to check shared information directly. The system is provided to support Global Maritime Distress Safety System (GMDSS) to identify the level of security and additional information related to a ship.

MMSI is a number consisting of nine digits uniquely given to each ship under maritime mobile service. The first three digits represent the license issuance country and is followed by six digits to identify the ships. A total of 170 MMSI numbers were registered in 2011.

Table 13 Satellite Coordination Meeting

World Radio Conference 2012 (WRC-2012) and the National Preparatory Working Group for WRC-2012 (NPWG WRC-2012)

World Radio Communication
Conference (WRC) is a conference
under the auspices of the United
Nations to discuss and coordinate
the allocation of radio frequencies
worldwide. It is held every three/
four years to consider and make
changes to the Radio Regulations
(RR) which require the provision
and use of frequencies
around the world.

MCMC is responsible for reporting the views of the industry and Malaysia's stand on each WRC agenda outlined. The view from the industry is gained through the National Preparatory Working Group (NPWG). Members of the working group consists of representatives from MCMC, Ministry of Defence, Royal Malaysia Police, the Civil Aviation Department and holders of the relevant licenses from the communications and multimedia sector and other stakeholders such as the Malaysian Amateur Radio Association (Marts). MCMC's involvement is as follows:

- i Provide suggestions and recommendations for the formulation of Malaysia's views on every agenda of WRC-2012 in the Asia-Pacific Telcommunity Preparatory Group (APG), and
- ii Involved in the APG and the Conference Preparatory Meeting (CPM) to ensure Malaysia's views are taken into account. In 2011, the Commission attended the meeting in Geneva CPM and APG5 meeting in Busan, Korea.

Technical Coordination Between Borders

Technical coordination in border areas is important to ensure an efficient use of frequencies that can solve the problem. Coordination is handled in accordance with specifications and regulations stipulated on the domestic and international levels.

There are four coordination platforms established to address the use of radio spectrum in the border areas of the country:

- Frequency Assignment Committee of Singapore, Malaysia and Brunei Darussalam (FACSMAB)
- ii Joint Technical Committeebetween Malaysia -Thailand (JTC)

iii Joint Committee on Communications between Malaysia – Indonesia (JCC)

iv Trilateral Coordination Meeting between Indonesia, Malaysia and Singapore

The determination of distance for zones coordination for use of the spectrum, the coordination of radio spectrum planning, registration of frequency used in border areas and solutions for interference in the area were some of the main agendas discussed in the sessions.

The registration of the use of radio frequencies to the ITU is also designed to protect the use of frequencies in Malaysia, especially in the area of the international border.

DEVELOPMENT

- i. Frequency Assignment Committee of Singapore, Malaysia and Brunei Darussalam (FACSMAB)
 - A total of 12 FACSMAB
 meetings were held from
 January to December 2011 and
 2 FACSMAB Review meetings
 were held on 20 January 2011
 in Brunei Darussalam and on
 28 September 2011 in Singapore.
 The meetings had successfully
 resolved the issues concerning
 the use of frequencies in
 Malaysia, Singapore and Brunei.
 - The meetings were represented by the authorities of the country's communication sector and the Armed Forces of the three member states. It became the platform for discussions on the frequency registration.
- ii. Joint Technical Committee between Malaysia -Thailand (JTC)
 - 2 JTC meetings were held in Kota Kinabalu, Malaysia in March 2011 and in Khon Kaen, Thailand in July 2011. The meetings had resolved issues related to the use of frequencies in bordering areas in Malaysia and Thailand.
 - The meetings consisted of representatives from the communications authorities of their respective countries and a few of the radio communications operators and government agencies that are also stakeholders from both countries. It became the platform for discussions on the frequency registration.

- iii. Joint Committee on Communications between Malaysia - Indonesia (JCC)
 - In 2011, the JCC meeting was held once in November in Bandung, Indonesia.
 - The meetings had resolved the issues involving the use of frequencies in Malaysia and Indonesia.
 - The meeting consists
 of representatives from
 the authorities of the
 communications sector of
 respective countries and a
 number of radio communication
 operators and government
 agencies and stakeholders
 from both countries.
 - It became the platform for discussions on the frequency registration.
- iv. Trilateral CoordinationMeeting between Indonesia,Malaysia and Singapore
 - Trilateral Meeting which was held once in June in Kota Bharu, Kelantan.
 - The meeting was successful in resolving emerging issues involving the use of frequencies in border areas
 Islands Batam/Bintan/Riau (Indonesia), the South Johor (Malaysia) and Singapore.
 - The meeting consisted of representatives from the communications authorities of the respective countries.

Registration of the Use of Frequency at National Border Areas at ITU

The main purpose of the registration of frequency is to ensure that the use of frequency especially at national border areas is protected and authorised by ITU. Therefore, the use of frequency, which had been agreed at FACSMAB, JTC and JCC level, was registered with ITU throughout 2011.

Bilateral Coordination Meeting between Malaysian Armed Forces (ATM) and MCMC

.....

This bilateral meeting was held in December 2011 in Kuala Lumpur and aimed to discuss the issues related to the requirements and needs on spectrum management of ATM's radio communication. It became one of the discussion platforms to ensure that each issue was handled well and given appropriate action. Meeting of members comprised of representatives from the ATM (representing all the services in ATM) and related departments in the MCMC.

Spectrum Planning

The new Spectrum Plan document was published on 27 September 2011. This document was based on the ITU Radio Regulations 2008 and is to replace Spectrum Plan document version November 2006.

Standard Radio System Plans (SRSP)

The basis of the legal requirements and technical aspects of the use of certain spectrum bands for wireless system or services are described in the Standard Radio System Plans (SRSP). Through the establishment of a working group consisting of government, communications and multimedia industry, broadcasters, consumer association on radio spectrum and higher education institutions, related matters were discussed to produce the above mentioned documents. These documents will be reviewed and revised to ensure that the needs of the current spectrum usage can be met. A review of the 13 above-mentioned policy documents by regular services has also been implemented to meet the requirements for the use of Satellite Services in the same band.

Negotiations between the industry and government agencies have been carried out to find the best solutions to address this issue so that users would only experience minimal impact while meeting the new requirements of the satellite sector.

A joint working group with the industry was established to develop a new policy to allow the Fixed Service to operate in the frequency band 4GHz and 80GHz. The new policy in this 4GHz band connects radio communication systems at the transmitter stations located on oil rigs in the middle of the ocean with the head office on land.

As for the new policy in 80GHz band, it will meet the needs of the industry in addressing the capacity demand of the consumers in the future.

Lecture Series

MCMC also organised three lectures on the use of spectrum, the latest wireless technology and the future prospects. These lectures were used as platforms for sharing knowledge, experience as well as strengthening the relationship between industry, government and other parties.

No LECTURE TOPICS

- The Regulatory Impact of the Migration from Digital Mobile Radio (DMR)
- 2 Small Cell (Personalisation of Base Station)
- 3 Propagation Impairment Migration Techniques for Satellite Communication Systems

Figure 14 2011 Lecture Series

Universal Service Provision

In order to bridge the digital gap and achieve a balanced and equitable development in terms of communication facilities between rural and urban areas, MCMC has implemented the Universal Service Provision (USP) initiatives. The efforts made under the USP programme have come to fruition when the rate of broadband penetration in Malaysia on 31 December 2011 was announced at 62.3%, an increase of 6.7% compared to previous year. At the same time, Malaysia's population coverage for mobile services has recorded a rate of 95.2% nationwide coverage as of 31 December 2011.

USP PROJECTS 2011

COMMUNITY BROADBAND CENTRE (CBC)

One of the MCMC approaches to bridging the digital gap in the local community in the development of ICT technologies is through the implementation of CBCs. In 2011, another five new CBCs were implemented in Sarawak Expansion Phase, adding on to the 246 existing CBCs all over the country developed in the earlier phases, namely the Pilot Phase, Phase 2, Phase 3 and Phase Felda. CBC becomes a platform of human

capital development and capacity building as well as a platform to create awareness on communication products and services.

The CBCs are managed by two supervisors responsible for carrying out various activities related to information technology such as training, seminars and workshops so that local communities can benefit from the facilities provided. Five **CBCs under Sarawak Expansion** Phase is shown in Table 15.

NO	CBC NAME	DISTRICT	UNIVERSAL SERVICE TARGET (UST)	SERVICE PROVIDER
1	Kg Serasot	Bau	Bau	Maxis
2	Long Beruang	Marudi	Marudi	Telekom Malaysia Berhad
3	Sematan	Sematan	Lundu	DiGi
4	Lawas	Lawas	Lawas	TT DotCom
5	Sundar	Sundar	Lawas	TT DotCom

Table 15 CBCs - Sarawak Expansion Phase

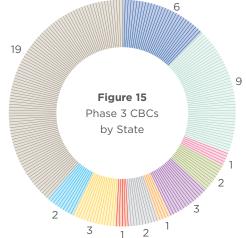

MINI COMMUNITY BROADBAND CENTRE (MINI CBC)

This programme provides broadband services collectively to the public living near the premises of the Information Department. MCMC equips the premises with the latest IT hardware and highspeed Internet connection.

Mini CBCs have created opportunities for the community to use the facilities as well as exploring new ways to generate income.

In Phase 3, a total of 49 Information Offices have been provided with this facility, in addition to the existing 72 Mini CBCs. Figure 15 shows the number of CBC for Phase 3 by state.

1MALAYSIA COMPUTER

.....

1Malaysia Computer programme aims to distribute 1 million units of laptops/netbooks to high school students from Government/ Government-aided schools and students from the Public School/Private Higher, the poor and low-income groups living in underserved areas.

1Malaysia Computer programme targets to distribute 1 million units of laptops/netbooks to to the target groups in three phases: Phase 1, Phase 2 and Phase 3.

Since announced by the Prime Minister on 24 March 2010, RM1 billion from the USP Fund has been from allocated for the purpose of granting laptops/ netbooks packages to target groups. In 2011, the 1Malaysia Computer programme continued with Phase 2 and Phase 3. The target group consisted of high school students from Government/Government-aided schools and students of Public/ Private Higher Learning Institutions who came from low-income families living in underserved areas.

Apart from the benefits received by the target group of this program, the 1Malaysia Computer programme is expected to open up opportunities for small and medium enterprises (SMEs) in particular indigenous groups in various areas including innovation, content development, creativity and human development, installation of equipments, training and awareness campaign to users or collaborative engagement through the implementation of the activities. Consequently, this will increase the subscription rate for broadband services throughout Malaysia. Figure 16 lists the allocation of 1Malaysia Computer Phase 2 and Phase 3A throughout the country.

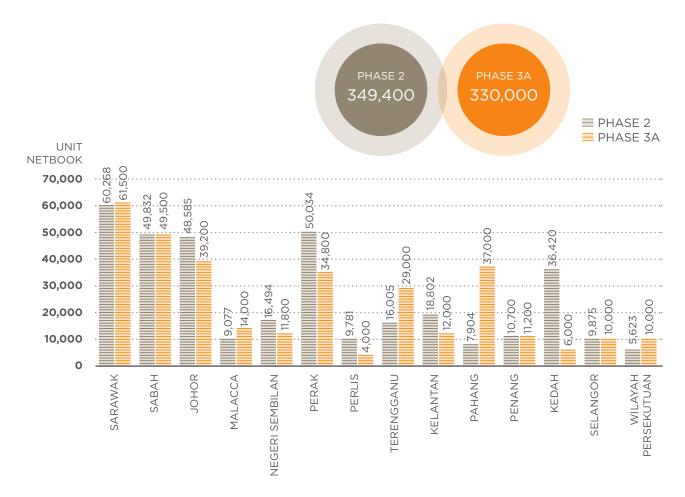

Figure 16 Provision of 1Malaysia Computer programme for Phase 2 and Phase 3A by state

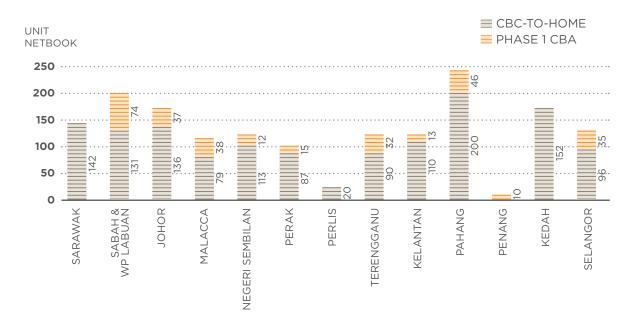

Figure 17 Wireless Village according to state

WIRELESS VILLAGE (KTW)

Wireless Village (KTW) is one of the initiatives under the USP programme that focuses on the provision of Internet access services collectively to community groups and to the recipients of netbooks under the 1Malaysia Computer programme. This initiative was conceptualised by Dato' Dr. Rais and is implemented in stages. Overall, the Government, through the MCMC, has targeted to provide Internet access with minimum charges to 3,100 villages located in rural and underserved areas. Until 31 December 2011, KTW was implemented through two different methods and approaches.

The first approach is named CBC-to-Home in which the KTW location is determined by selecting the nearby villages with existing CBC or by appointing the existing CBC Service Providers to provide broadband access by installing at least 3 access points at the selected KTW to give coverage up to 300 metres from the site of the installation.

The second approach is accomplished through the Collective Broadband Access (CBA Phase 1) open bidding in which the licensees are invited to register their interest and submit the bid documents or their draft USP Plan. The selection of village

through this second method is preferable to underserved areas with no CBC. Priority is given to the Village Library, and areas where people congregate such as town hall public, schools and others.

The number CBC-to-Home and KTW CBA Phase 1 are shown in Figure 17.

The KTW criteria execution generally includes:

- · Backhaul via wired connection, microwave or satellite system
- · Access to broadband wireless technologies such as Wi-Fi, 3G and WiMax

TIME 3

.....

Time 3 is a programme to expand cellular coverage targets by constructing 1,000 new telecommunication towers. Upon completion, the cellular population coverage is predicted to increase from 92% to 97%. The targeted areas include extreme rural areas across the country with a population of fewer than 80 people per square foot. In 2011, a total of 233 new towers were built and are now fully operational. In the same year, a total of 304 towers have started construction with another 336 have

With an increase from 127 in 2010 to 233 towers in 2011, the cellular population coverage rate has increased from 95.12% to 95.43% by the end of 2011. Despite the small increase due to the low rate of population in the target areas, the impact on rural communities are still noteworthy as the community can now enjoy the convenience of cellular services in their respective areas. This is evidenced by record of high usage in the rural areas of new coverage in Sabah and Sarawak. Number of towers by state and

The implementation is targeted for completion by end of 2012. With the completion of all these towers, cellular population coverage is projected to soar to 97%.

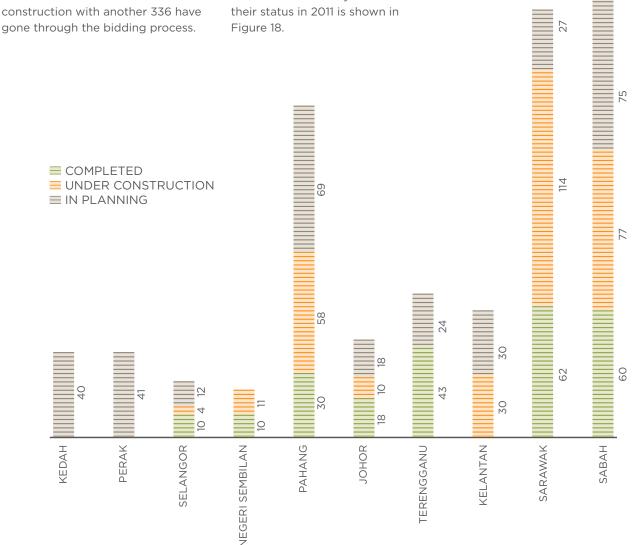

Figure 18 Number of towers according to states

Market Regulation

COMPETITION

In 2011, MCMC has received several complaints regarding exclusive content in the broadcasting sector. The complaints involved allegations on anti-competitive behaviour in the broadcasting sector as the broadcasters acquire the exclusive contents.

After analysing and comparing with other countries such as Australia, United Kingdom and Singapore, it was found that the main issue in all these countries was related to sports content.

Thus, MCMC has held several meetings with major broadcasters to gain more information and feedback on the broadcast of 'national interest' sports such as football and badminton. Each broadcaster submitted their views on sporting events that should be listed. Based on the feedback, MCMC proposed to issue a list of sports content with elements of national interest.

ACCESS

More than 100 access agreements have been evaluated to ensure that they are aligned with the Communication and Multimedia Act 1998 (CMA 1998), the related provisions and legislation. From the exercise, it was found that

only 39 access agreements were registered and in accordance with the goals outlined in the CMA 1998.

MCMC also oversees the Malaysian Access Forum Berhad (MAFB), an access forum under the CMA 1998. MCMC has reviewed the access code given by the access forum but did not proceed with registration. This is mainly due to the fact that MAFB did not undertake public consultation, as outlined in the Public Consultation on Voluntary Industry Code issued by MCMC.

In addition, MCMC has also initiated a study to determine the costs of providing facilities and services on the access list. Existing access list was determined on the 12 June 2005. It was amended on 5 January 2009 and included the facilities and services which are subjected to standard access obligations, where the facilities and services in the access list must be given to network facilities providers, network services providers, applications service providers or content applications service providers on the basis of equality and without discrimination. This study will be used by MCMC to determine the price of access services or access disputes in the event of complaint on excessive rates by any party. The study is expected to be completed in the third quarter of 2010.

MONITORING

MCMC is responsible for monitoring the compliance of new companies awarded with the individual licences. This is to ensure that these companies launch the new services as specified and comply with a detailed business plan under the terms of their licence.

......

In 2011, MCMC had monitored more than 94 individual licencees in which 34 of them are new licencees. A total of 16 site visits had been conducted at the premises of the new licencees to evaluate their networks and services. From the site visits, it was found that 23 of the licencees failed to comply with conditions of the licence. The companies now have applied for an extension of time or seeking to modify the detailed business plan.

MCMC has recommended the cancellation of eight individual licences, in which four individual licences have been revoked due to failure to comply with the Communications and Multimedia Act 1998 and the terms of the licence. On top of that, MCMC monitors the activities of the 3G cellular service providers and WiMAX to ensure their compliance with a detailed business plan.

Licensing & Resource Assignment

ASSIGNMENT ACTIVITIES

MCMC is the agency responsible to issue assignments on the use of radio frequency assignment. It covers all uses of radio frequency categories under the Spectrum Assignment (SA), Apparatus Assignment (AA) and Class Assignment (CA). This section provides a report on the work and activities undertaken by the Radio Spectrum Allocation Department (RSAD) in 2011.

TYPES OF ASSIGNMENT

Spectrum Assignment
Based on the IMT2000
Spectrum Assignment, a
total of 55,518 base stations
have been installed in 2011.
Table 10 shows the number
of base stations installed by
Celcom, UMTS, U Mobile and
DiGi for the year 2011. The
total proceeds from Celcom,
UMTS, U Mobile and DiGi were
approximately RM126 million,

obtained through Spectrum Assignment Fees, Spectrum Maintenance Fees and Change in Spectrum Assignment Fees. Table 11 shows the total of fees collected from the Spectrum Assignment in 2011.

REGION / OPERATOR	CELCOM	UMTS	U MOBILE	DiGi	TOTAL
Northern	4,426	4,343	814	688	10,271
Eastern	2,258	2,688	24	21	4,991
Central	9,464	9,452	3,291	2,007	24,214
Southern	4,913	4,489	632	540	10,574
Sabah	1,311	841	-	583	2,735
Sarawak	1,458	1,107	-	168	2,733
TOTAL	23,830	22,920	4,761	4,007	55,518

Table 10 Total base stations installed by the operators in 2011

ASSIGNMENT HOLDERS	SA FEE	SA MAINTENANCE FEE (2011)	SA MODIFICATION FEE (RM)	TOTAL (RM)
CELCOM		41,760,800		41,760,800
UMTS		38,505,600		38,505,600
U MOBILE	22,200,000	7,998,480	1,000	30,199,480
DiGi		15,602,160		15,602,160
TOTAL (RM)	22,200,000	103,867,040	1,000	126,068,040

Table 11 Total of fees collected from the Spectrum Assignment in 2011

2 Apparatus Assignment

Referring to Table 12, the number of new applications and renewal applications for Apparatus Assignment processed and approved stood at 17,429 and 83,146.

TYPE OF ASSIGNMENT	NEW APPLICATION	RENEWAL APPLICATION	TOTAL
Ship Stations	269	852	1,121
Aeronautical Mobile Stations	122	318	440
Land Mobile Stations	359	1122	1481
Amateur Stations	1,649	1981	3,630
Broadcasting Stations	721	206	927

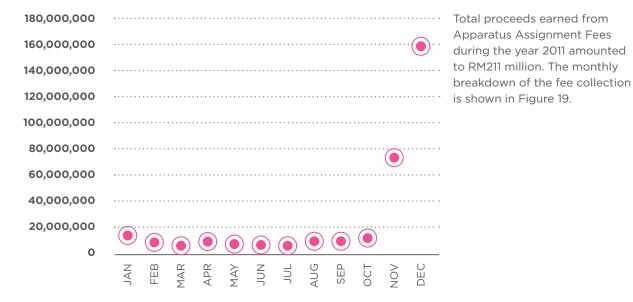

Figure 19 Total Apparatus Assignment Fees collected in 2011

.....

3 Apparatus Assignment Verification Audit

Inspection and compliance verification activities on Apparatus Assignments undertaken by the Radio Spectrum Assignment Department (RSAD) are to ensure that all communication equipment has Apparatus

Assignment Certificate and complies to the terms and conditions determined by MCMC. A total of six inspection and verification activities have been conducted throughout the country involving a total of 2,357 Apparatus Assignment. Information related to these activities is shown in Table 13.

NO	DATE	APPARATUS ASSIGNMENT INSPECTIONS CONDUCTED	LOCATION	TOTAL APPARATUS ASSIGNMENTS INSPECTED
1	25-28 January 2011	WiMAX transmitter stations owned by YTL Communications Sdn Bhd in the Northern Region	Perak, Kedah, Penang and Perlis	565
2	1-4 March 2011	WiMAX transmitter stations owned by YTL Communications Sdn Bhd in the Southern Region	Malacca and Johor	444
3	10-13 May 2011	WiMAX, Fixed Services and Mobile Services transmitter stations in the Eastern Region	Pahang and Terengganu	608
4	18-21 October 2011	WiMAX, Fixed Services and Mobile Services transmitter stations in the Northern Region	Perak and Kedah	308
5	9 November 2011	VSAT stations in Karak, Pahang and Banting, Selangor	Karak, Pahang and Banting, Selangor	4
6	22-25 November 2011	WiMAX, Fixed Services, Mobile Services and Broadcasting Services transmitter stations in the Sarawak Region	Miri and Limbang	428
тот	AL APPARATUS ASSIGN	IMENT INSPECTED		2,357

 Table 13 List of inspection and compliance verification activities in 2011

Trial Transmission Verification Activities

Trial transmission verification activities are conducted by MCMC's officers to ensure and validate the use of transmitters that had been approved. One of the conditions of granting certificates apparatus requires MCMC's officers to be present

and to confirm the transmission before the apparatus certificate is given to the applicant. This is to ensure that the frequencies comply with all the conditions that have been set and the parameters used are described in the certificate of apparatus assignment.

4.1 Verification of Trial Broadcasting Transmission Services

The details of the inspection and verification activities are shown in Table 14.

DATE OF CONFIRMATION	LOCATION	SERVICE	BROADCASTER	TRIAL DURATION
19 May 2011	TM Bukit Keratong Transmitter Station, Sabah	FM Radio	Maestra Broadcast Sdn Bhd Measat Radio Sdn Bhd Perfect Excellence Waves Sdn Bhd One FM Radio Rimakmur Sdn Bhd	6 months
30 Jun 2011	TM Bukit Djin Transmitter Station, Sarawak	FM Radio	Maestra Broadcast Sdn Bhd Measat Radio Sdn Bhd Perfect Excellence Waves Sdn Bhd One FM Radio Sdn Bhd	6 months
21 Jul 2011	TM Gunung Telapak Burok, Transmitter Stations, Negeri Sembilan	Analog TV	CH-9 Media Sdn Bhd	1 year
25 Oct 2011	TM Taman Sentosa Transmitter Stations, Johor Bahru	FM Radio	One FM Radio Sdn Bhd	6 months

Table 14 List of inspection and verification trial test of broadcasting services in 2011

4.2.1 Confirmation of trial transmission of LTE technology using 2.6 GHz frequency band

MCMC has approved the apparatus assignment for Long Term Evolution (LTE) technology testing at selected locations to few of the licencees. It is intended to provide an opportunity for them and for MCMC to identify potential and actual capabilities of LTE technology using 2.6 GHz frequency band.

Subsequently, inspection and verification activities for LTE trials have been carried out by MCMC. During the year 2011, MCMC has approved trial LTE using 2.6 GHz band to four companies. The approved trial period is for a maximum of six months, up until 31 December 2011. Three of the companies have conducted trials in Klang Valley area while another one held the trial in the state of Johor. A total of 12 base stations accreditation audit were conducted.

4.2.2 Verification of LTE TDD
(Time-Division Duplex)
Technology Transmission Trial
using the 2.3 GH frequency band
Verification of trial transmission
using LTE TDD technology in
the 2.3 GHz frequency band was
also carried out in Selangor. The
objective of these trials is to test
the functionality and capabilities
of these technologies in static
and mobile applications.

4.2.3 Verification of LTE Technology
Transmission Trial using the
850 MHz frequency band
Verification activities of LTE
technology trial transmission in
850 MHz band are done to test
the capability of LTE technology
and the coverage area by using
the lower band frequency

Information on verification activities are shown in Table 16.

	PTP, Johor
	Johor Port, Johor

Table 16 Locations of the LTE 850 MHz Technology Trials

4.3 Verification of transmission trials in Fixed Services

MCMC received four applications from telecommunications companies to conduct trial in the 71 GHz to 76 GHz and 81 GHz to 86 GHz frequency bands. The objective of the trial was to test the correlation between the effects of rain and user experience. The trial was also to test the network in terms of capacity, quality and characteristics of the system. The trial has been approved for a period of three months and the list of the events is shown in Table 17.

Programme Identification Code (PI Code)

Beginning 2011, MCMC took the initiative to organise and coordinate the use of Programme Identification Code (PI Code) used in the transmission of FM radio broadcasters. PI Code is a unique code used to identify a broadcast signal on Radio Data System (RDS).

Based on the meeting with broadcasters on 8 February 2011 on the use and issues related to the PI Code, MCMC has organised and coordinated the use of PI Code for broadcasters. The code has also been included in the certificate Apparatus Assignment for each FM radio station transmitter.

Improvements and enhancements of e-Spektrum Portal

Upon launching of the e-Spektrum portal in 2008, users are able to apply the apparatus on-line apparatus by logging on to https://e-Spektrum.skmm. gov.my. This portal is widely used by telecommunication operators such as Celcom, Maxis, DiGi, U Mobile, YTL and Packet One to make application on the apparatus.

To improve users' experience, MCMC has taken the initiative to improve the e-Spektrum by simplifying the apparatus application process. The improvements were made based on feedback from users, primarily from the telecommunications operator: • Allows bulk apparatus application to be made in batches to ease the process and save time for fixed services and WiMax services

......

- Data verification method to ensure the criteria are met to reduce errors during application
- Able to generate report in MS Excel format to extract the status of applications made by applicants

Bilateral Coordination Meeting between MCMC and Royal Malaysia Police (RMP)

A bilateral coordination meeting was held between MCMC and RMP on the 15th of November 2011 at Mahkota Hotel, Malacca. This meeting discussed the requirements and coordination of the frequencies used by RMP.

DATE OF ACTIVITY	LOCATION

8 Approval on Apparatus Assignment and Licensing Division Committee Meeting

As a measure to improve customers' experience, MCMC has undertaken the initiative to organise the Apparatus Assignment Approval Committee Meeting. The objective of the meeting is to ensure that all apparatus application are processed according to customer charter and comply to the policies and guidelines.

The Committee is chaired by the Senior Director of Licensing and Assignment and staffed by the Director of Radio Spectrum Assignment, Director of Spectrum Policy and International Technical Coordination, Director of Engineering and Spectrum Interference Resolutions, Director of Policy Research and Development

Department, Director of Licensing Department, and Director of the Competition and Access Department.

The meeting is conducted on a weekly basis. A total of 42 meetings were conducted during the year 2011, which has reviewed and considered the application apparatus throughout 2011.

9 Awareness on Apparatus Assignment Course

.....

In 2011, MCMC has organised awareness courses for shippers, prívate network and amateur radio to give exposure on the apparatus assignment.

Briefing sessions were also conducted for MCMC Regional Officers and Satellite Vehicle Tracking users on e-Spektrum.

Table 18 shows the list of awareness programmes related to apparatus assignment conducted in 2011.

монтн	PROGRAMME
Jan 2011	Briefing on functional application of e-Spektrum to satellite vehicle tracking users at MCMC, Cyberjaya
Feb 2011	Briefing on class assignments, introduction to AAIG, private network, ship stations, amateur radio stations and aircraft at MCMC, Cyberjaya with MCMC Regional Officers.
	Seminar on Amateur Radio at Shah Alam Convention Centre
Dec 2011	Marine Resources Awareness Programme with Perlis Department of Fisheries
	Seminar on Amateur Radio at Shah Alam Convention Centre

Table 18 The list of awareness programmes related to apparatus assignment conducted in 2011

LICENSING ACTIVITIES

MCMC holds the responsibility to issue licences under the Communications and Multimedia Act (CMS) 1998, Postal Services Act 1991 and Digital Signature Act 1997.

LICENCES UNDER THE **COMMUNICATIONS AND** MULTIMEDIA (CMA) 1998

The licences under the CMA 1998 is legislated to be neutral in terms of technology and services, consistent with the maturity and the convergence of the communications and multimedia industry in Malaysia. The licensing terms in CMA 1998 allow the licence holders to conduct and manage activities related to marketing. This has created opportunities to increase awareness and growth within the industry, especially in the **Application Service Providers** field; and encouraged the efficient usage of network infrastructures. The 4 categories of activities considered are:

- NFP (Network Facilities Providers)
- NSP (Network Services Providers)
- ASP (Application Service Providers)
- CASP (Content Application Service Providers)

Under the 4 categories mentioned, there are two types of licence issued - Individual Licence and Class Licence. Individual licence is issued to activities involving higher level of regulating, while Class Licence only requires registration and can be renewed every year. The list of licencees can be referred to at the register maintained by MCMC.

In particular, there are three categories of individual licences:

- A NETWORK FACILITIES PROVIDER (NFP) INDIVIDUAL LICENCE This licence is issued to those who own and/or provide certain network facilities such as transmitter and radio communications links, fixed links, cables and towers that use the facilities of other network.
- **B NETWORK SERVICES** PROVIDER (NSP) INDIVIDUAL LICENCE Services covered under this category include bandwidth services, broadcasting distribution services, cellular mobile services, access applications and space services.
- C CONTENT APPLICATION SERVICE PROVIDER (CASP) INDIVIDUAL LICENCE This licence is required for the provisioning of content applications services such as satellite broadcasting, subscription broadcasting, terrestrial free-to-air TV and terrestrial radio broadcasting.

LICENSING ACTIVITIES

In 2011, MCMC has processed new applications for the following licences:

......

- a 19 NFP Individual Licences
- b 20 NSP Individual Licences
- c 4 CASP Individual Licences

Out of these applications, the Minister had approved 18 NFP (I) licences, 18 NSP (I) licences, and 4 CASP (I) licences. These licences were registered by MCMC.

Among the infrastructures included under the NFP individual licence are earth station network facilities, cable and fixed links, radio communication transmitters and links. As for NSP individual licence, the service category generally provided to the applicant includes bandwidth services, access application services, switching services and gateway services. Application for CASP (I) is related to subscription broadcasting services and terrestrial radio broadcasting services.

Application for Renewal of NFP and NS Individual Licences

MCMC has processed 4 applications for renewal of NFP and 3 applications for renewal of NSP licences. Out of these, the Minister has approved a total of 3 NFP (I) and 3 NSP (I) licences.

Issuance of Class Licence under the CMA 1998

A total of 25 applications were received for registration of NFP, 28 for NSP, 31 for CASP and 713 for ASP, as shown in Table 19.

CLASS	NUMBER OF REGISTERED LICENSEES
NFP	25
NSP	28
CASP	31
ASP	713

Table 19 Number Of Registration For The Various Class Licences

Application for variation of Individual Licence Conditions/ Surrender or Transfer of Individual Licences

In addition to the new licence application, MCMC also handles the processing of applications to modify, alter or revoke the conditions, or impose further conditions of the individual licences in 2011.

Applications to modify the conditions of the licences were received for 11 NFP individual licences and 5 CASP individual licences; with 10 of them being approved by the Minister – 10 applications to modify the NFP (I) licence and 5 to modify the CASP (I) licence.

The applications to modify NFP (I) licence were related to types of network facility, the scope of licence and the operational area of the licence holder.

While for the CASP licence, the applications involved the location of the control centre and the conditions of the content.

In 2011, a total of 3 licencees had surrendered their licences. They are Magxo Sdn Bhd, Best Multimedia Sdn Bhd and Asiaspace Digital Network Sdn Bhd. Magxo Sdn Bhd has surrendered their NSP (I) licence, Best Multimedia Sdn Bhd has surrendered their NFP (I) and NSP (I) licences while Asiaspace Digital Network Sdn Bhd has surrendered NFP (I), NSP (I) and CASP (I) licences. As a result, these companies are no longer holding any licences.

The list of licensees whose licences were revoked due to the failure to pay their annual licence fee is shown in Table 20.

The individual licensees that had transferred the ownership of their individual licenses in 2011 are as follow:

 Setia Haruman Sdn Bhd has transferred the NFP (I) and NSP (I) licences to Setia Haruman Technology Sdn Bhd effective 23 May 2011; and

 Asia Media Sdn Bhd has transferred NFP (I), NSP
 (I) dan CASP (I) licences to Maha Semarak Sdn Bhd effective 13 December 2011.

Nominated facilities provider

Pursuant to Section 130 CMA 1998, the Minister may, on the recommendation of MCMC, determine that licenced network facilities, besides the owner of other network facilities, is a facility provider for the the network facility for the purpose of CMA 1998, if the Minister is satisfied that the nomination will not impede the attainment and administration of CMA 1998.

In 2011, Fibrecomm Network (M) Sdn Bhd was appointed as the named Facility Provider over two determinations by the Minister for two separate agreements with Tenaga Nasional Berhad and Sabah Electricity Sdn Bhd.

NO	LICENCEE WITH LICENCE REVOKED	TYPE OF LICENCE	EFFECTIVE DATE
1	Airosys Sdn Bhd	NFP(I) & NSP(I)	8 Mar 2011
2	eB Technologies Sdn Bhd	NFP(I) & NSP(I)	8 Mar 2011
3	Obnet Sdn Bhd	NFP(I) & NSP(I)	5 Sep 2011

Table 20 List of licencees with their licences revoked

Management and Assignment of Numbers

In accordance with the 10 policy objectives outlined in the Communications and Multimedia Act (CMA) 1998, the efficient management of numbering resources is critical to ensure the provisioning of the network services and application services offered to the consumers can be done systematically.

THE IMPLEMENTATION OF NEW NUMBERING FORMAT FOR MOBILE CELLULAR SERVICES

As a measure to meet future demands for adequate reserved mobile cellular numbers, MCMC has introduced a new format of numbering system in the first quarter of 2011 by launching prefix 011, which utilises 8 digits of the user's number. This project was planned by MCMC with the industry earlier in the third quarter of 2009 and was ensured to not affect the existing services.

The implementation of this new format is specifically to overcome the insufficient numbers of the mobile cellular services and to meet future demands. This measure can also help the industry to explore new markets especially in the application field to meet consumers' demand.

PREFIX FOR MOBILE CELLULAR SERVICE PROVIDERS

MCMC has determined that all mobile cellular services will share the new prefix 011 with 8 digits of number to all service providers, including the existing cellular service providers, WIMAX service providers and Mobile Virtual Network Operators to ensure a more efficient usage of the numbers.

Table 21 shows the list of licence holders with the assigned mobile cellular telephone numbers in 2011.

......

In total, there are 154 million numbers provided, including the prefixes 010, 012, 013, 014, 016, 017, 018 and 019 with 7-digit numbers. As of 31 December 2011, 45.95% (70.76 million) of the total telephone numbers have been assigned.

PREFIX	CUSTOMER NUMBER	TOTAL OF NUMBER	SERVICE PROVIDER
O11	14,000,000 - 14,499,999	500,000	Maxis Mobile Services Sdn Bhd
011	17,500,000 - 17,999,999	500,000	Maxis Mobile Services Sdn Bhd
011	14,500,000 - 14,999,999	500,000	Celcom Axiata Berhad
O11	15,500,000 - 15,999,999	500,000	Celcom Axiata Berhad
011	26,000,000 - 26,999,999	1,000,000	DiGi Telecommunications Sdn Bhd
O11	20,000,000 - 20,499,999	500,000	Talk Focus Sdn Bhd
O11	18,500,000 - 18,999,999	500,000	Tune Talk Sdn Bhd

Table 21 The assigned block of numbers for mobile cellular service providers in 2011

PREFIX FOR BROADBAND SERVICES

MCMC has approved the prefix 0159 for broadband services due to good reception of the broadband services by Malaysians.

This new prefix is able to support the Government initiatives towards increasing the growth rate of broadband users in Malaysia. The block numbers approved by MCMC in 2011 for the broadband services are shown in Table 22.

Until December 2011, the total of numbers approved for broadband services was recorded at 1.05 million, involving prefix 0158 and 0159.

PREFIX FOR TELEPHONY SERVICE OVER INTERNET PROTOCOL (TSOIP) SERVICES

The TSOIP services are well received and favoured by Internet users due to easy access and widespread availability of 3G services, WIMAX, broadband, HSBB and WiFi, all by using existing access terminals.

This type of service also allows the users to make phone calls and download files from the Internet, at cheaper rates compared to other broadband services. The block numbers approved by MCMC in 2011 for broadband services are shown in Table 23.

In order to meet consumers' demand for various application services, a total of 860,000 of numbers for TSOIP service have been approved.

PREFIX	CUSTOMERS NUMBER	SERVICE PROVIDER
0159	2,000,000 - 2,499,999	Celcom Axiata Berhad
0159	6,000,000 - 6,499,999	DiGi Telecommunications Sdn Bhd

Table 22 Number blocks for Broadband Service Providers

PREFIX	CUSTOMERS NUMBER	SERVICE PROVIDER
0154	6,000,000 - 6,499,999	Telekom Malaysia Berhad
0154	8,780,000 - 8,789,999	Tg Agas Technology Sdn Bhd

PROVISION OF INTERNET PROTOCOL VERSION 6 (IPv6) FOR PRIVATE SECTOR

The implementation of IPv6 in Malaysia is monitored by the National IPv6 Implementation Monitoring Committee chaired by the Ministry of Information, Communications and Culture (MICC). MCMC has been given the role as a catalyst for the private sector while Malaysian Administrative Modernisation and Management Planning Unit (MAMPU) was for the public sector.

Based on the information gathered from the public and private sector, the level of IPv4 usage in Malaysia and the global growth of IPv6, the date of IPv6 readiness has been determined as follows:

- a Available in dual-stack IPv6 by the end of 2013;
- b Full availability of IPv6 (native) by end of 2015.

According to the IPv6 Compliance Audit report, the latest status of ISP in Malaysia is as follows:

a The availability of ISP Infrastructures

IPv6 Compliance Audits Phase 1 and Phase 2 were performed to monitor the level of readiness of the ISP infrastructure. As of December 2011, a total of 16 ISPs have had available IPv6 infrastructure.

b The readiness of the ISP providing services to users

IPv6 Compliance Audit Phase 3 was conducted in the fourth quarter, in 2011 to monitor the availability of ISPs in providing IPv6 connectivity to customers. 16 major ISPs were involved of which 12 successfully performed the audit phase 3 and expressed their commitment to provide IPv6 connectivity to customers in 2012; while DiGi, Packet 1, Time and U Mobile were not ready to do IPv6 Compliance Audit Phase 3.

Table 25 lists the service provider that had undergone IPv6 Compliance Audit Phase 1, 2 and 3.

......

IPv6 Compliance Audit Phase 3 Committee was established to monitor the execution of the audit done by the ISP based on the self audit method. This committee will consistently monitor the commitment by the ISP and will provide report to the National IPv6 Implementation Monitoring Committee.

	SERVICE PROVIDER	IPv6 READY INFRASTRUCTURE (PHASE 1 & 2)	IPv6 READY CUSTOMERS SERVICES (PHASE 3)

Note IPv6 Compliance Audit Phase 3 above does not include cellular number services as the service is not IPv6 ready.

Table 25 List of Service Providers for IPv6 Compliance Audit

The following activities and initiatives planned by MCMC are expected to be done in the first quarter of 2012 and will support the development of human capital, promotion and consumer awareness for the successful implementation of IPv6 in Malaysia:

a Development of Human Capital (Traning/Workshop)

MCMC has planned to provide IPv6 Training Programme for 80 engineers between February and March 2012.

b IPv6 Deployment Kit

A total of 2000 posters and 500 mini booklets has been printed and distributed to Government bodies and the the industry in the first quarter of 2012. This kit contains basic information on

how to to check whether the existing system is IPv6ready and has guidelines to implement the IPv6.

c IPv6 Tunnel Broker

IPv6 Tunnel Broker allows the users to access any IPv6 services and applications on the Internet. This service is expected to be completed in the second quarter of 2012.

MOBILE NUMBER PORTABILITY (MNP)

Mobile Number Portability (MNP) Service has been available in Malaysia for more than 3 years since it was first launched in October 2008. The percentage of numbers ported in 2011 has not changed much compared with 2010, i.e. 2% as shown in Table 26. The total of cellular numbers ported until 31 December 2011 is 2,688,427 which shows an 8.1% growth compared to 2010 with 7.8%.

Figure 20 shows the number of porting activities for each quarter of the year (non-cumulative) since its launch in the third quarter 2008 to fourth quarter 2012. The number of porting activities in 2011 shows an increase from 155,946 in the first quarter to 200,678 in the fourth quarter. This is probably contributed by the increase in promotional activities from the cellular service providers and the introduction of new packages in that particular year. The addition of total cellular subscribers from 33.8 million in 2010 to 35.7 million in 2011 has also contributed to this increase.

YEAR	NUMBER OF CELLULAR SUBSCRIBERS	TOTAL OF CELLULAR NUMBERS PORTED	PERCENTAGE OF CELLULAR NUMBERS PORTED
2008	27,700,000	211,692	0.8%
2009	30,400,000	1,074,990	3.5%
2010	33,800,000	696,807	2.1%
2011	35,700,000	704,938	2.0%

Table 26 Total of numbers ported from 2008

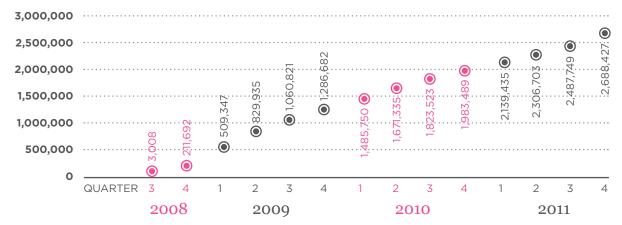

Figure 20 Total of cellular numbers ported (cumulative) on quarterly basis

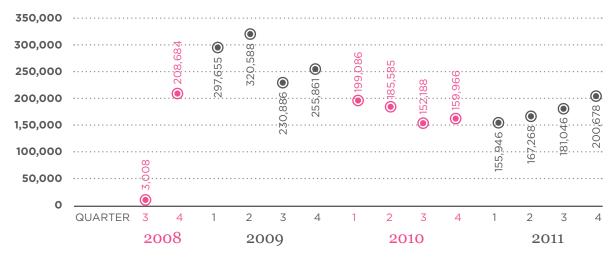

Figure 21 Total numbers ported in each quarter (non-cumulative)

DURATION TAKEN FOR PORTING NUMBERS

Porting numbers can be divided into two categories namely Consumer Ports (Individual) and Non-Consumer Ports (Corporate/Business Clients). Upon approval, the duration taken to port the numbers shall take a maximum number of 2 days for Consumer Ports and 5 days for Non-Consumer Ports. CONSUMER PORTS On average, 99% of numbers has been ported within 2 days, as shown in Figure 22.

Figure 22 Consumer Ports

.....

NON-CONSUMER PORTS

For Non-Consumer Ports, almost 100% of the numbers has been successfully ported in less than 5 days, as shown in Figure 23.

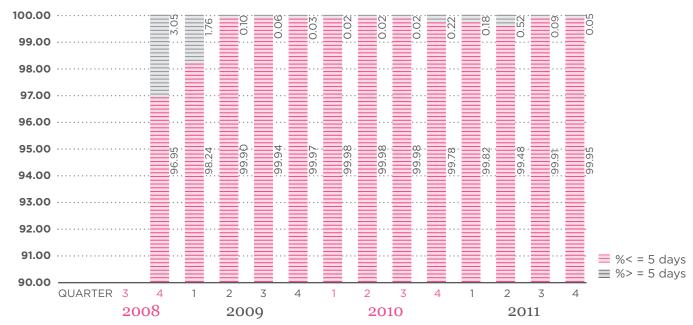

Figure 23 Non-Consumer Ports

Table 27 shows the comparison of total ported numbers between the Consumer Ports and Non-Consumer Ports. The percentage of non-users transfer number increased from 4.4% in 2010 to 5.6% in 2011.

YEAR	CONSUMER PORTS	NON-CONSUMER PORTS
2008	209,202	2,490
2009	1,051,613	23,377
2010	666,265	30,542
2011	665,696	39,242
GRAND TOTAL	2,592,776	95,651

Table 27 Total of Consumer Ports and Non-Consumer Ports

DENIED APPLICATION FOR PORTING NUMBERS

Applications to port the numbers will be rejected by the service providers if the customer has overdue payments, has contracts with existing service providers, provides wrong identification details, the account has been closed, or if the number that is being ported has an additional line number and other related reasons. Figure 24 shows the rejected application for porting numbers with various reasons as mentioned above. The percentage of applications rejected in the fourth quarter of 2011, 25% was the lowest, which coincides with the fourth quarter of 2009. However, this number includes the applications rejected more than once.

A major bulk of the rejected applications were due to wrong identification details provided. This happens because the number was registered using a different identification details in the existing service provider's database. For instance, the number of the applicants was registered under the father's name, but the applicant is not aware or have forgotten about it.

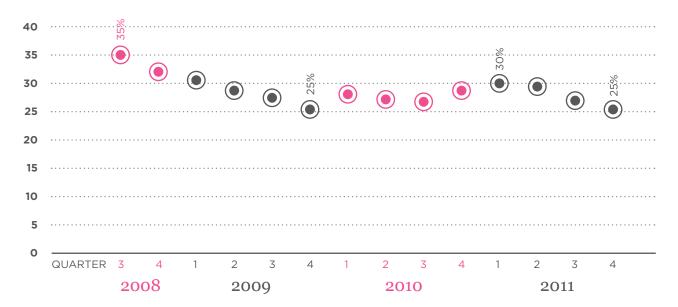

Figure 24 Percentage of Rejected Application for Porting Numbers

Compliance

CONSUMER PROTECTION

The telecommunications and ICT sector remains one of the fastest growing and most buoyant sectors in the world, including in Malaysia. Nowadays, social and economic activities can be done anywhere, anytime with just a click.

However, with the rapid pace of technology and widespread of various services and applications, consumers sometimes find it difficult to choose the right content services at the right time. This has put them in an inconvenience with not knowing what to do when they are in that situation.

Thus, MCMC as the custodian in maintaining the balance between the rights of the consumers, industry and the investors, always ensures that the consumers are given options and have access to high quality services at competitive pricings. This, at the same time will benefit the users with the initiatives that have been planned thus narrowing the digital gap.

Consequently, the provisions of the consumer protection act have been designated to promote and protect the interests of consumers in matters of communication and multimedia services. As the regulator for the CMA 1998, MCMC plays an important role in ensuring the industry respond to the needs of consumers and instill their confidence in the quality of the services offered. This can be achieved through development and enforcement of consumer codes and standards, resolution of the consumer's

dispute, accurate and effective regulation on the rates imposed and by offering quality services.

As a measure to protect the consumers' right, MCMC had organised a seminar on "Consumers Right in the Communications and Multimedia Services" throughout the country. Among the countries visited were Johore, Kelantan, Terengganu, Kedah, Sabah, Negeri Sembilan, Selangor and Putrajaya.

QUALITY OF SERVICE MANDATORY STANDARDS

MCMC regulates the performance of the application and network service providers by mandating the standards on the quality of service. Mandatory standards are the minimum standards that must be met by service providers in their service offerings to customers.

SERVICE MANDATORY STANDARDS ARE CREATED TO:

- i Improve and protect the rights of the consumers;
- Measure the quality of services received or used by users based on the actual criteria and specifications; and
- iii Improve Malaysia's global competitiveness through robustness of the industry.

To comply with certain standards, complaints against service providers shall not exceed the maximum number of complaints. Non-compliance to the Quality of Service Mandatory Standards is an offense under

Section 105 (3) of the Communications and Multimedia Act (CMA) 1998, and the offender shall be liable to a fine not exceeding RM100,000 or imprisonment not exceeding two years, or both.

Currently, there are 7 Quality of Service Mandatory Standards registered between 2003 and 2011. The mandatory standards include:

- Public Switched Telephone Network (PSTN)
- 2 Public Cellular Services (PCS)
- 3 Dial Internet Access Service (DIAS)
- 4 Content Application Service (CAS)
- 5 Payphone Services (PP)
- 6 Digital Leased Circuit Services (DLL)
- 7 Broadband Access Services (BB)

As required under the Quality of Service Mandatory Standards, service providers are required to submit semi-annual reports to demonstrate their compliance with these standards. MCMC will conduct a random or selected audit on the report submitted by the service providers to ensure they are authentic and meet the minimum standards that have been set.

SUMMARY REPORT FOR PERIOD ENDING JUNE 2011

For the reporting period ending June 2011, MCMC has received 57 reports from the relevant service providers. Based on the reports received from the 249 relevant standards, nine of them did not comply with standards. The overall percentage of compliance is 96.39%. Digital leased line services and broadband access services have the highest compliance, respectively at 6.35% and 6.25%.

Table 28 shows the overall compliance with the related standards.

CUSTOMER SATISFACTION SURVEY

The Customer Satisfaction Survey is done to complement the Quality of Service Mandatory Standards. The intention of this survey is to measure the customers' satisfaction level of telecommunications and multimedia services in Malaysia. It covers fixed line services, cellular services, Internet access services (dial-up and broadband), public telephones, digital leased services, free-to air television and radio services, cable television, and postal and courier services.

In 2011, MCMC has successfully conducted two customer satisfaction surveys that focused on cellular and

broadband services. MCMC adopted telephone interviews and face-toface interviews with respondents to gather the findings. The results from this study are released in the second quarter of 2012. The findings will be shared with the service providers for the purpose of improving their quality of services.

......

MOBILE CONTENT SERVICES

Cellular phone penetration rate at the fourth quarter of 2011 has reached 123% (source: Facts and Figures, MCMC). This has opened up opportunities for the development of value-added services such as content and applications to grow.

SERVICE	NUMBER OF STANDARDS	NUMBER OF STANDARDS COMPLIED	NOT COMPLIED TO THE STANDARDS	PERCENTAGE COMPLIED (%)	PERCENTAGE DID NOT COMPLY (%)
Public Switched Telephone Network (PSTN)	50	50	0	100.00%	0.00%
Public Cellular Services (PCS)	16	16	0	100.00%	0.00%
Dial Internet Access Service (DIAS)	4	4	0	100.00%	0.00%

Table 28 Overall compliance based on services

This scenario provides a great challenge for MCMC in ensuring the development of mobile content offered gives benefit to consumers in Malaysia. A variety of consumer issues arise such as spam, advertising and marketing activities and the validity of the charges to the consumer.

In 2011, MCMC has received a total of 339 complaints related to mobile content services. The complaints cover various matters as shown in Table 29.

Continued efforts are needed to address issues such as enforcement, administration and monitoring.

Awareness programmes are also essential to empower self-regulation. In 2011, MCMC has opened 40 investigation papers for breaching the Mandatory Standards for Mobile Content Service Provision (Mandatory Standards), which, if found guilty can be fined a maximum of RM100,000.00 or imprisonment for up to two years or both.

In the meantime, a number of administrative actions have been taken for violation of Mandatory Standards. These actions are shown in Table 30.

MCMC also conducts monitoring activities on the provision of mobile content services by subscribing/buying the services provided to identify the service provider's level of compliance to the mandatory standards. In addition, advertisements are also monitored to ensure that consumer interests are protected.

A series of awareness programmes was also held all over Malaysia including Sabah and Sarawak to educate consumers regarding mobile content. Through this program, users are exposed to mobile contents and self-regulation to empower the consumers is also strengthened.

Development of mobile content services is an important area in the communications industry in our country because it allows communication tools to function and play a role in the society. Without content, the advanced communication tools that we have will not be able to function at its best.

Major challenges for MCMC in the mobile content sector come from spam activities, misleading advertising and pricing of content services offered as well as all forms of unsolicited or false advertising.

As a measure to address these issues, MCMC has imposed Mandatory Standards for Mobile Content Services on 1 July 2010. Offense for Mandatory Standards can lead to a fine of RM100,000 or two years imprisonment or both.

In 2010, 44 enforcement actions were taken against service providers of mobile content for breaching the Mandatory Standards outlined in Table 31.

SEMINAR ON CONSUMER RIGHTS IN COMMUNICATIONS AND MULTIMEDIA SERVICES

In 2011, MCMC in cooperation with the Consumer Forum of Malaysia (CFM) has organised an awareness seminar on consumer rights in the communications and multimedia services. The seminar was conducted from July to December 2011 and involved 10 seminars in 8 locations in Johore, Kelantan, Terengganu, Kedah, Sabah, Penang, Selangor and the Federal Territory of Putrajaya.

The purpose of the seminar was to raise awareness and educate people about the rights of consumers in the communications and multimedia industry. This is based on complaints received by MCMC on issues regarding fraud cases, getting a paid SMS service, misleading advertisements, radiation and cable theft. The invitations were also extended to service providers, the Consumer Forum Malaysia, Pos Malaysia and Bank Negara to participate and to panel the seminar.

This panel session is important because it serves as a conduit for consumers to voice their concerns and their dissatisfaction with the service offered. From this programme, the user will get immediate feedback from the service providers. This idea also allows a self-regulatory mechanism, in which the user is given the opportunity to participate in the development of codes and consumer protection.

Monitoring & Enforcement

CUSTOMER COMPLAINT BUREAU (CCB)

As the centre for lodging complaints, Customer Complaint Bureau (CCB) receives various types of complaints that cover telecommunication services, broadcasting, Internet, postal and courier services. In 2011, a total of 9.221 complaints were received by the Bureau of Consumer Complaints. There is an increase of more than 15% compared with 8.013 complaints received in 2010. Comparison of complaints received since 2002 is shown in Figure 25.

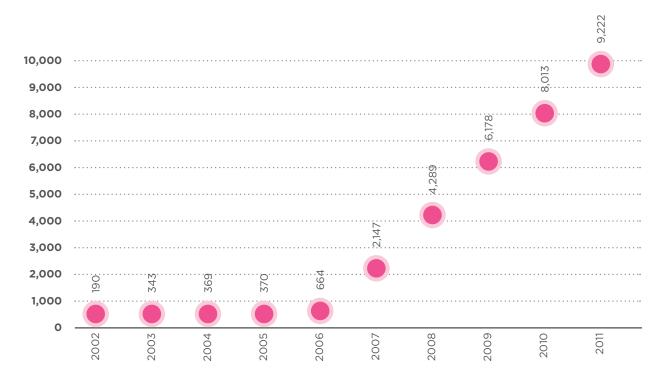

Figure 25 Consumer complaints received by MCMC from 2002 until 2010

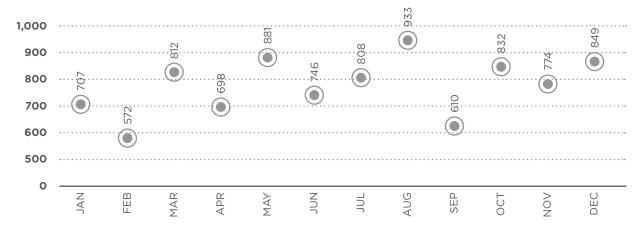

Figure 26 Number of complaints received by month for the year 2011

91% of the total complaints were received directly from the public, while the rest came from law enforcement agencies, government agencies and consumer organisations. Almost 58% (5,321) of complaints were made via Complaints Commission (http://aduan.skmm. gov.my) and the number of walk-in complainants at MCMC's office has also increased to a total of 652 complaints compared to 459 in 2010. Other complaint channels available are e-mail, 1800 hotline, SMS, mail and fax.

A total of 70% out of 9,221 complaints received in 2011 was related to the provision of the service provider and service performance. The highest type of complaint received was on

the quality of service with 2,820 complaints (30% of total complaints) of which involved the Internet services/connection that is not satisfactory, service interruptions and delays in installation/activation. Other complaints received were related to bills and charges, coverage of services, short messaging services (SMS), postal and courier services abuse, unfair practices and disputes over the terms and conditions.

The remaining 30% is related to the provisions and action under MCMC jurisdiction, which were related to the content on the Internet, SMS, TV and radio, cyber crimes such as phishing,

spectrum interference, illegal assembly transmitting satellite TV, telecommunications structures and radiation and a variety of other complaints. There were also complaints which were not under the jurisdiction of MCMC such as software/hardware purchasing, contests, copyright, gaming, Internet investment schemes and others. These complaints were referred to the related agency for further action.

......

On average, 20% of the 9,221 complaints were resolved within 72 working hours which has achieved the Key Performance Index (KPI) set by the Minister for the year 2011.

CONTENT REGULATION

The Department of Content Regulation is responsible in conducting monitoring activities on broadcast content based on the provisions of the Communications and Multimedia Act (CMA) 1998, the Individual Content application Service Provider (CASP-I) licence conditions, the Communications and Multimedia Content Code and other relevant guidelines.

In addition, MCMC also established relationships with various Government agencies and ministries, including MICC, Ministry of Home Affairs (MOHA), the Board of Film Censors, Content Forum, the Department of Islamic Development Malaysia (JAKIM) and the National Film Development Corporation Malaysia (FINAS).

MCMC has also organised awareness programmes and training sessions for the CASP-I licence holders as a proactive measure to ensure that the legal provisions concerning the content of broadcasting by the licensees are observed. For instance, MCMC has held 2 training programmes in 2011 which were the Workshop and Seminar on Content Regulation in June and December 2011.

Management of consumer complaints related to content such as advertisement and radio broadcasting is among MCMC's critical role. Thus, MCMC has always acted on complaints by monitoring and facilitating the resolution of complaints received from consumers.

TYPE OF COMPLAINTS RECEIVED IN 2011

Internet

In 2011, MCMC has received 515 complaints related to the content of the Internet, compared with 1,114 complaints in 2010. 234 complaints were in relation to indecent content, 232 complaints on contents that are menacing or offensive in nature, and 42 false contents. Another 7 complaints were found to be outside MCMC's purview.

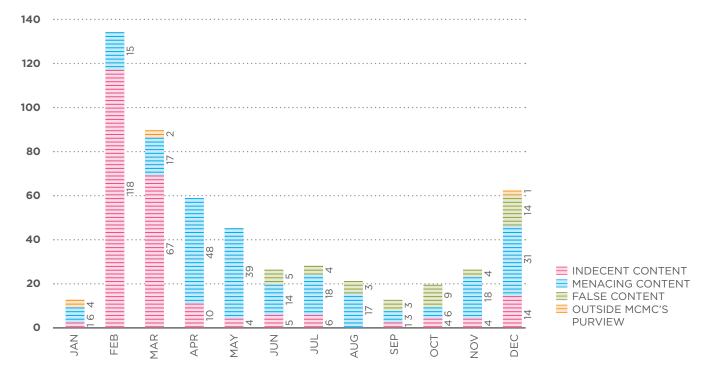

Figure 27 Types of Internet complaints received in 2011

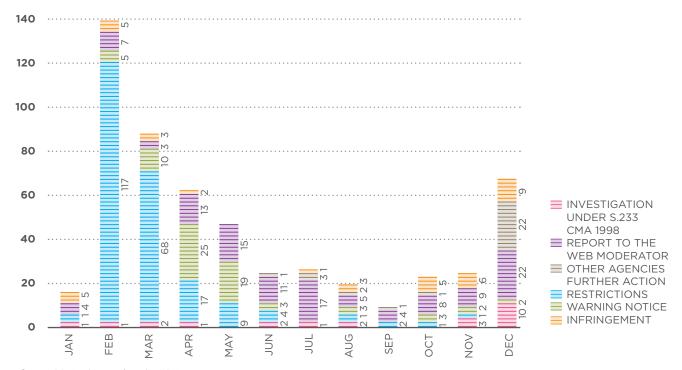

Figure 28 Actions taken in 2011

Among the proactive actions taken by MCMC to overcome the complaints were to restrict access to certain websites (221 cases), and to issue 72 notices and 132 reports to the moderators. At the same time, a total of 13 Internet related cases were investigated under the CMA 1998; 39 complaints were found to violate CMA 1998 while another 8 complaints were forwarded to other agencies for their further action.

Television

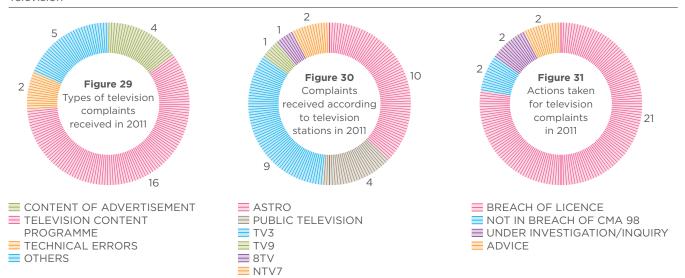

The breakdown of complaints received for television can be referred to from Figure 29. 16 of the 27 complaints were related to the programme content. These complaints included violence

content, insulting to certain cultures, racial-insensitive content, offensive and unsuitable discussion topics. Another 5 complaints in other categories were on frequency coverage and replay of the broadcast. This was followed by 4 complaints on the content of advertisements, and 2 complaints regarding technical offenses such as the content featured less than 60% of the local content. technical offenses, or content that is flooded with advertisements.

COMPLAINTS RECEIVED ACCORDING TO TELEVISION STATIONS Referring to Figure 30, among the stations receiving complaints were Astro, TV3, TV9, 8TV, NTV7 and Public Television. Astro has recorded the highest number of complaints with 10 complaints, followed by TV3 with 9 complaints, Public Television with 4 complaints. NTV7 with two complaints and one report each for TV9 and 8TV.

ACTIONS TAKEN IN 2011 Upon processing, a total of 21 cases were found not in breach of CMA 1998. This was followed by enforcement action on 2 cases, with 2 cases given advice and another 2 cases still under further scrutiny by MCMC, as shown in Figure 31.

.....

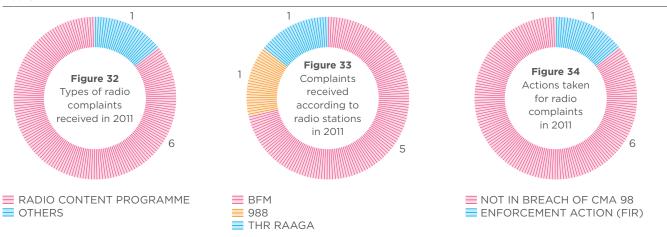

Radio

Referring to Figure 32, a total of 7 radio-related complaints were received. 6 complaints were related to programme content, such as topic of conversations that touched upon religious matters, the negative nature of content and contents with insensitive and racial sentiments. There was only 1 complaint received in relation to other categories.

COMPLAINTS RECEIVED ACCORDING TO RADIO STATIONS Referring to Figure 33, complaints were received for 3 radio stations namely BFM, 988 and THR Raaga. BFM recorded the highest number of complaints, followed by 988 and THR Raaga.

ACTIONS TAKEN IN 2011
Figure 34 shows the actions
taken to resolve the complaints
received in 2011. After processing,
it was found that 6 cases
reported did not contravene
the CMA1998 while one case that
was recorded in December required
further action from MCMC.

COMPLAINT RESOLUTION

An internal Standard Operation Procedure (SOP) was developed to evaluate and manage the complaints received by MCMC. In addition to the complaints from Customer Complaints Bureau, there were also complaints received from various law enforcement agencies as well as Government agencies such as the Ministry of Information, Communications and Culture (MICC), Ministry of Home Affairs (MOHA), Ministry of Health Malaysia (MOH), the Board of Film Censors, Forums on Content and others.

RESEARCH COLLABORATION ON NETWORKED MEDIA **CONTENT BETWEEN MCMC** AND INSTITUTIONS OF **HIGHER LEARNING**

In 2008, a programme called Research Collaboration on Networked Media Content between MCMC and the Institutions of Higher Learning was established to realise the goal of the National Policy for the communications and multimedia industry.

The purpose of this research collaboration programme is to enhance knowledge, perform research and support the implementation of policies relating to networked media and regulation. Research grants provided under this programme will not only help to increase the capacity of

higher education institutions in the research of networked media content but also increase the number of Malaysian researchers with expertise in this field. The community will also be able to benefit from the knowledge resources and applications as a result of this study.

An annual seminar was held to report the findings of the research. The one-day seminar which was given the theme 'Content Network Media Seminar 2011' was held at MCMC headquarters in Cyberjaya on 19 September 2011. The studies gave focus on the usage of new media and its acceptance by Malaysian. With the increasing influence of the new media, its benefits and effects are now becoming limitless. At the same time, the Government takes the matter on the negative implications seriously, such as pornography, false information and online gambling. Thus, preventive actions are seen as the best precautions to protect the consumers besides the development of local content which is more suitable.

The year 2011 marked the second year of MCMC collaborating with Institutions of Higher Learning. This collaboration was also intended to improve the knowledge on the use of new media by Malaysian and was aimed to assist MCMC and the Government to create an online environment that is healthy, and able

to produce media-literate consumers and empower them to practice self-regulation.

......

The seminar also discussed the new developments in social media from a business perspective. It goes on to give an overview of the roles of social as well as success stories of social media entrepreneurs.

In 2011, 4 universities were selected from 11 proposals submitted involving 8 universities. The selection process was the result of careful considerations by a panel that represented the academic community, the industry and MCMC. The selected universities received a research grant each, which are shown in Table 34.

This two-year project is expected to produce findings that can be used to develop practical policies and practices that are more effective in governing the positive and negative aspects of new media in the long run.

The public will benefit from the research findings through seminars and publications by MCMC. MCMC will also hold awareness programmes in schools around the Klang Valley area to educate them on the proper use of this new media.

....

ASPECTS OF STRENGTHENING THE CAPACITY

Apart from carrying out its corporate responsibility, MCMC also conducted Corporate Social Responsibility activities. In 2011, 34 activities were conducted to reach out to the Government agencies, industries and the public. MCMC organised seminars, talks and workshops as part of its ongoing effort to educate and raise awareness towards the safe use of online networking.

MCMC has also collaborated with Media Prima in educating primary school students to use the Internet positively. The programme is called 'TV3 Kids School Attack' and was carried out in 9 schools all over the country. Table 35 summarises the activities conducted in 2011.

TELEVISION APPEARANCES

In addition to community outreach through lectures and briefings, MCMC has also made appearances in television. A total of 8 interview sessions were conducted in 2011. The aim was to create public awareness on the abuse of the Internet and the importance of cyber security in their daily lives. Table 36 shows a summary of the interview that was broadcasted.

MCMC has partnered with Astro to protect the public from abuse of Internet and to promote Consumer Complaints Bureau through the following mechanisms:

- a Displaying of crawlers on Internet security through channels @ 15;
- b Monthly billing statement

PUBLICATION

Handbooks and pamphlets about safety on the Internet were also distributed to the public such as:

- a Safety Handbook on the Internet;
- b Safety Brochure on the Internet;
- c Brochure on Making Safer Password:
- d Internet Banking brochure; and
- e Brochure on Fraud on the Internet.

This initiative aims to raise public awareness of the safety and danger on the Internet.

COMMUNICATIONS AND MULTIMEDIA CONTENT FORUM OF MALAYSIA

The Communications and Multimedia Content Forum of Malaysia (CMCF) has been designated as a content forum under Section 212 of the Communications and Multimedia Act (CMA) 1998. CMCF was established

in February 2001, as a society under the aegis of the MCMC to govern content and address content related issues disseminated by way of the electronic networked medium.

......

In 2011, CMCF conducted 106 public relations initiatives and awareness activities. Guest speaker from Cybersecurity Malaysia was invited to give talks on Internet security during the CMCF. Besides that, CMCF was also included in exhibitions like broadcast Asia 2011, Upin & Ipin ICT Carnival, seminars on Content Regulation 2011 and Securing the Network 2011.

Table 37 showcases the summary of activities held in 2011.

8	Dec 2011	TV9	Nasi Lemak Kopi O	Pornografi Semakin Menjadi-jadi

Table 36 Television appearances and interviews conducted in 2011

CMCF also organised a seminar on Communications and Multimedia Content Code Malaysia and Internet Security at Cinta Sayang Resort in Sungai Petani, Kedah on 28 February 2011. The participants comprised students and lecturers from various institutions of higher learning in the Northern Region.

Besides working with MCMC and the Ministry of Information, Communications and Culture in educating the public, CMCF also works with government bodies such as Ministry of Health, Ministry of International Trade and Industry, the National Council of Women's Organisations (NCWO), the National Population and Family Development (LPPKN), the Selangor Islamic Religious Department and the Ministry of Women, Family and Community Development.

111 complaints were received by the CMCF in 2011 and a total of 16 requests were given to the content advisories. Of the 111 complaints, 72 complaints were received from the public, 4 complaints were received from the industry and 35 complaints were received from other parties. The complaints were related to advertising, mobile content, content broadcasting and Internet content. However, no court cases were reported for 2011.

Table 38 Summary of complaints received by category

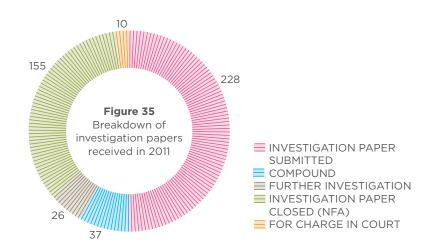

Summary of complaints received by category is shown in Table 38.

As a regulatory body for MCMC, CMCF will continuously organise training sessions for the industry and general public. This is in line with its objective to educate the industry and raise the public awareness on matters related to content.

PROSECUTION

The Prosecution Department had received 228 cases and investigation papers for Deputy Public Prosecutor further action. Of the total, 10 cases were directed to court hearing, 26 to be further investigated, 37 papers were offered compounds and 155 papers were ordered to be closed (NFA).

The breakdown of the investigation papers handled by the Prosecution Department is shown in Figure 35.

There were 10 cases charged in 2011, besides cases from previous years that were still on trial or resolved in 2011. The cases can be referred at Table 39 and Table 40.

NO	CHARGED	OFFENCE	DATE CHARGED	STATUS	COURT DECISION
1	Nor Hisham Osman	Sending comment that is obscene in nature	13 Mar 2009	Pleaded Guilty	Fined RM12,000.00

Table 40 Cases charged in court in the year 2011

The Prosecution Department was also involved in a series of seminars and presentations to improve the quality of the organisation. At the same time, various preparatory steps are being taken to deal with the amendments to the laws, including one of the most important amendments, the Criminal Procedure Code where the amendment and inclusion of new sections will impose direct impact on the prosecution Department. The establishment of National Legal Aid Foundation (YBGK) announced by the Government was also seen as one of the initiatives to prepare and equip MCMC with the guidelines and processes that need to be followed in handling court cases. Among the courses and seminars attended by representatives from Prosecution Department are:

- National Civics Bureau Course in Penang from 26 to 30 April 2011 by Prosecution Department, Attorney General's Chamber.
- ii Basic Law Drafting Course (Various Departments) in Judicial and Legal Training Institute (ILKAP), Bangi from 9 to 11 May 2011. 'Investigation and Prosecution Department Retreat' at Hotel Thistle, Port Dickson on 21 to 22 Mei 2011.
- iii Visit to CyberSecurity Malaysia forensic laboratory at Seri Kembangan on 13 July 2011.

- iv Bridging Barriers: Legal and Technical of Cybercrime Cases at Putrajaya on 5-7 July 2011.
- Seminar on the Efficacy of the Sedition Act 1948 at the Attorney General's Chamber on 26-27 September 2011.
- vi Prosecution Division Conference at Kuantan, Pahang organised by Attorney General's Chamber from 5 to 9 December 2011.
- vii Workshop on Internet Investigations Related to Copyright Violations at MCMC Academy from 15 to 16 December 2011.

To ensure transparency, the Prosecution Department also provides monthly reports to the Minister of Information, Communication and Culture. This was followed by weekly statistical reports and monthly statistical report presented at the Attorney General's Chamber through monthly meetings, with law enforcement agencies and chaired by the Head of the Prosecution Division of the Attorney General's Chamber.

Currently, the Prosecution Department has a Deputy Public Prosecutor and two prosecuting officer to handle cases in the Sessions Court and Magistrates' Courts across the country. All investigation

papers will be scrutinised by the Deputy Public Prosecutor in the Prosecution Department. However, for classified or high-profile cases, the investigation papers will be referred to the General and Sexual Crimes Unit, Attorney General's Chamber and /or the Prosecution Division of the Attorney General's Chambers for further instructions.

......

SECURITY, TRUST & GOVERNANCE

CONSOLIDATION OF PREPAID USERS REGISTRATION PROCESS

Until the third quarter of 2011, there were already 35,707,000 mobile phone users in Malaysia. Of this amount, a total of 28,774,000 are prepaid cellular service users while the rest are post-paid cellular line users.

With 80% of mobile phone users using prepaid services, MCMC through continuous monitoring and enforcement always ensures that the procedure and effective measures are used in the process of registration of prepaid users, This is done by ensuring service providers capture customers' information accurately based on the information contained in MyKad, passports and other identification papers.

In addition to the verification carried out by the service providers, MCMC also conducted a verification process on users' information through the cooperation of the National Registration Department (NRD).

To date, NRD has confirmed a total of 12.93 million users' data by MCMC and of this amount, less than 5.5% (713,372) were returned by the NRD as inaccurate data. The inaccuracy happened either because of mistakes in the spelling of names or mismatched identification numbers. This

data is then returned to the service provider to reconfirm the information. If the information is not confirmed, the service provider will terminate the service.

.....

In 2011, MCMC has conducted a number of sessions on the verification process for manual registration of the prepaid services with NRD.

A total of 1.8 million data had been sent to NRD for the verification process, as shown in Table 41.

	DATA PROCESSED BY NRD	TOTAL DATA NOT FOUND	PERCENTAGE OF FALSE REGISTRATION
FIRST SERIES (March 2011)	868,026	53,913	6.2%
SECOND SERIES (October 2011)	939,264	92,337	9.8%

 Table 41 Number of data sent to National Registration Department

In addition, MCMC also held a series of spot checks in Sabah and Eastern Region for the year 2011. A total of 296 representatives of service providers in Sabah were checked. For the Eastern Region, 262 representatives were checked, comprising the state of Kelantan, Terengganu and Pahang.

Of this total, 137 were found not to comply with the registration guidelines and appropriate action had been taken against them by the respective service providers.

MANAGEMENT AND MAINTENANCE OF .MY DOMAIN NAMES

Pursuant to Section 181 (1) of the CMA 1998, MCMC has appointed .my DOMAIN REGISTRY as the administrator to manage and maintain the integrated electronic address database in Malaysia. MCMC would oversee the compliance issues and play a role in promoting and planning strategies in the development of the '.my' domain name.

For 2011, MCMC and .my DOMAIN REGISTRY have implemented several projects that had been completed or still ongoing such as:

INCREASE THE TAKE-UP ON '.my' DOMAIN

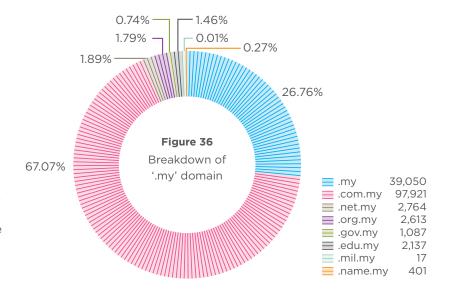

MCMC and .my DOMAIN REGISTRY together with Google Malaysia has launched the 'Get Malaysian Business Online (GMBO)' project in November 2011. This initiative aims to encourage at least 50,000 industry/small and medium enterprises in Malaysia to promote their products online. On top of giving away the first 10,000 '.com.my' domain names for free and the subsequent domain names at a cheaper rate, Google also equips the participants with free and easy tools for them to manage and update their website. Trainings, guides and useful tips are given continuously to the participants. More information can be found by logging on to http://www.getmybusinessonline. com.my.

Until 31 December 2011, a total of 145,990 users have registered with .my DOMAIN REGISTRY, which shows an increase of 29.4% compared to the previous year. Looking at the positive reception, MCMC and .my DOMAIN REGISTRY will continue the initiatives to promote '.my' domain as one of the Malaysia unique identity.

Detailed information on the breakdown of the '.my' domain name is shown in Figure 36.

......

Of the seven third-level domain name, '.com.my' has the largest percentage (67%) of users, mostly from companies and businesses. It was followed by second-level domain name, '.my' that was offered since 2010 which has now become one of the most common domain name registered with 27% in just 2 years. In order to qualify for the '.com.my', the registrar must have proof of ownership of the business from the Companies Commission of Malaysia, while for '.my', it is open to all individuals residing in Malaysia.

PENGENALAN NAMA
DOMAIN ANTARABANGSA/
INTERNATIONALISED
DOMAIN NAMES (IDN)

Internationalised Domain Names (IDNs) are domain names represented by local language characters. Such domain names could contain letters or characters from non-ASCII scripts (for example, Jawi, Tamil and Chinese). IDN in Malaysia will be another way for the commercial body to leverage and promote their product and services to non-English speaking users while at the same time, preserving Malaysia's multi ethnic culture and language.

At the end of 2011, the registration of Jawi, Tamil and Chinese IDN as the second domain name was opened to public. Until December 2011, a total of 1,392 domains had been registered – 294 for Jawi characters, 149 for Tamil characters and 949 for Chinese characters.

DOMAIN NAME SYSTEM SECURITY EXTENSION (DNSSEC)

DNSSEC is a technology which was introduced to improve Internet security in line with international specifications set by the Internet Engineering Task Force (IETF). It aims to increase the level of security to protect Internet users against attacks such as cache poisoning, 'pharming' and 'phishing'.

In 2011, MCMC and .my DOMAIN REGISTRY have conducted programmes to promote this type of technology in Malaysia. Among them are:

- Workshops on DNSSEC and IPv6 for ASEAN country code top-level domain (ccTLDs), PWTC, Malaysia.
- 2 DNSSEC Workshops for 44th APECTEL participants in Kuala Lumpur.

To date, the percentage of DNSSEC technology adoption in the domain name is still too low. However, the level of awareness of this technology is continuing to increase based on the feedback from programme participants. With more and more information shared on the importance of DNSSEC in protecting DNS server, it is expected that the percentage of adoption will increase each year.

CYBER SECURITY

CYBERCRIME LAW COURSE
IN COLLABORATION WITH
JUDICIAL AND LEGAL TRAINING
INSTITUTE (ILKAP) AND
COUNCIL OF EUROPE (COE)

Although there is an increase of the number of specialists in the field of information and communication technology (ICT) all over the world, the judges and prosecutors still seem to be less exposed to cybercrime and electronic evidence relating to ICT. For two consecutive years, MCMC in collaboration with the Judicial and Legal Training Institute (ILKAP) and the Council of Europe (COE) has organised a course dedicated to discussing legal and technical

cybercrime legislation. This course is essential for providing exposure to law enforcement agencies, prosecutors and judges in dealing with cyber crime in Malaysia. This course is critical as the number of cyber crime statistics keeps increasing each year.

ASEAN-JAPAN NETWORK SECURITY MEETING

In the arena of international cyber security, MCMC took part in the Meeting of ASEAN-Japan Network Security, held from 12 to 14 September 2011 in Tokyo, Japan. This involved being a leader for the Reinforcement Initiative 4.2, which is a common standard for network security to ensure the readiness and integrity of networks across ASEAN. At the same time, MCMC has contributed to the ICT Masterplan 2015 (AIM2015) and Terms of Reference of the **ASEAN Network Security** Action Council (ANSAC).

In addition, an agreement was also reached between the ASEAN countries and Japan in implementing cyber security awareness programme for the ASEAN region and Japan for 2012.

IMPLEMENTATION OF MS ISO/ IEC 27001:2007 INFORMATION SECURITY MANAGEMENT SYSTEM (ISMS) FOR THE **COMMUNICATIONS AND** MULTIMEDIA SECTOR

During the Cabinet Meeting on 24 February 2010, it was noted that the level of national security on critical information needs to meet the international standards that can be achieved through the implementation of MS ISO/IEC 27001:2007 Information Security Management System.

In accordance with the Cabinet's decision, MCMC through MICC has identified 11 critical organisations that require this certification. The targeted deadline for implementation of ISMS Phase 1 implementation is before January 2013. The 11 identified critical organisations are:

- 1 Telekom Malaysia Bhd
- Jaring Communications Sdn Bhd
- Time dotcom Bhd
- 4 NTT MSC Sdn Bhd
- 5 Maxis Berhad
- 6 Celcom Axiata Berhad
- 7 DiGi Telecommunications Sdn Bhd
- 8 U Mobile Sdn Bhd
- 9 Media Prima Berhad
- 10 Measat Broadcast Network Systems Sdn Bhd
- 11 .my DOMAIN REGISTRY

To help the organisations in getting the certification standards, MCMC organised a series of workshops. Some of these workshops are:

i ISMS Implementation Course

A total of 60 participants from all organisations attended this introductory course on the implementation of ISMS. This 2-day workshop was held 3 times, and was attended by 20 participants for each class. This course is sponsored by MCMC.

ii ISMS Lead Auditor Course

Another course that was sponsored by MCMC in 2011 was the ISMS Lead Auditor Course. This course identifies the participants as the Lead Auditor upon passing the tests carried out at the end of the course. This recognition is internationally recognised and can be used all over the world. Until the end of 2011, a total of 10 participants from various organisations was involved and managed to get the title of Lead Auditor for ISMS. This recognition is expected to assist organisations in obtaining certification of MS ISO / IEC 27001:2007 ISMS.

MCMC NETWORK SECURITY CENTRE (SNSC)

......

One of the goals of the National Policy of the CMA 1998 is to ensure the reliability and security of the network. During 2011, a total of 3,921 incidents involving cyber security and information systems have been addressed by the SNSC. 1,258 of the incident was the incident of 'Phishing' involving banks and financial institutions.

SNSC in cooperation with Internet service providers actively monitors the reliability and security of the network. In addition, SNSC was also involved in the Internet Banking Task Force (IBTF), an industry working group whose role is to control the problem of fraudulent banking and finance industry together with IT security experts from CyberSecurity Malaysia and the Royal Malaysian Police.

SNSC also collaborated with Malaysian enforcement bodies to prevent abuse of network facilities, network services, applications and content services applications.

When Malaysia received cyber attack from hackers group namely 'Anonymous' from 15-17 June 2011, SNSC played an important role in addressing this threat. By working closely with the National Security Council (NSC) and enforcement agencies, the impact of the attack had been lessened.

Figure 37 Phishing Statisties in 2011

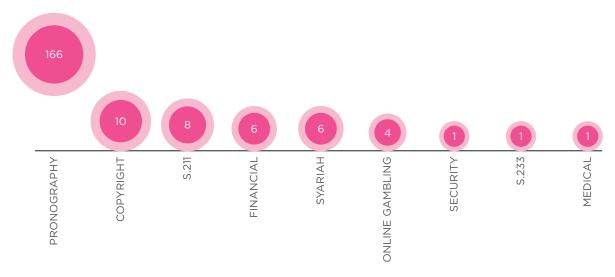

Figure 38 Preventive actions on misuse of content application services in 2011

To increase the level of readiness against cyber attack towards critical network information infrastructure, SNSC has been actively involved in two cyber crisis charity training. At the national level, SNSC has joined the charity training X-Maya 4 organised by the National Security Council to assess the level of readiness in facing the national cyber incident. As a leader in the communications sector, SNSC acts as a coordinator for other players such as Telekom Malaysia, MYNIC and Jaring. At the ASEAN

level, SNSC has participated in the ASEAN Cert Incident Drill (ACID 2011) of which the objective is to improve the coordination between the ASEAN countries in reducing the frequency of cyber attacks. For this purpose, SNSC has been working closely with member countries in various aspects in terms of increased network security and information-sharing initiatives.

MCMC also organised three industry talks that focused on issues related to network security, in collaboration with cyber security experts such as the SANS Institute, Hack In The Box (HITB) and MYNIC. Cyber security portal (http://www.skmm.gov.my/cybersecurity) and anti-phishing (http://www.skmm.gov.my/antiphishing) are also used as an important platform for disseminating important information to the public and stakeholders on the phishing and cyber incidents.

SPECTRUM MONITORING AND ENFORCEMENT

The Spectrum Engineering and Interference Resolution Department (SEIRD) is responsible to monitor and analyse the use of spectrum for the purpose of planning and assignment at national level. The use of spectrum is subject to spectrum regulations as set out in the Communications and Multimedia Act (CMA) 1998. SEIRD also implements projects by providing engineering equipment and capability to manage national spectrum.

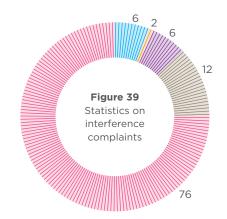

A total of two procurement projects has been started in the year 2011. The first acquisition involved the purchase of five sets of cellular service quality test equipment to replace the existing set in the area offices and as preparation for testing mobile broadband services in the future. The second acquisition involved the purchase of three units of moving frequency monitoring system vehicles, which is a vehicle designed for monitoring activities without being noticed. The two vehicles were designed based on mobile monitoring system and are equipped with 10 meters of antenna, based on the ITU specification for the measurement of quality of digital TV services in preparation to transfer the analogue television system to digital system.

SEIRD had received 101 complaints of radio interference in 2011. The breakdown of complaints by service category based on an International Telecommunications Agency (ITU) is shown in Figure 39.

More than 75% of complaints were made up of mobile services. 31 complaints reported by Packet One Networks Sdn Bhd (P1) were caused by the use of equipment that did not comply with the standards. The equipment is widely used among the public to connect to video and audio services wirelessly. Among that had been detected are as follows:

- 1 Connecting video and audio signals from the decoder to a TV located farther away.
- 2 Video signals from closed circuit television cameras outside the house to the TV in the house without wires.

This complaint is considered serious because the use of this equipment had caused interruption on the service by Packet One Wimax. Some examples of non-standard equipment pictures that have been found by enforcers are displayed.

WORKSHOP ON TECHNOLOGY AND TEST FOR TRANSMISSION OF DIGITAL VIDEO BROADCASTING - TERRESTRIAL SECOND TECHNOLOGY (DVB-T2)

In early March 2011, Asia-Pacific Broadcasting Union (ABU) and the Digital Video Broadcasting consortium, Radio Television Malaysia (RTM) and Rohde & Schwarz (R&S) Malaysia had conducted a technical workshop to test the transmission of the second generation of DVB in the Klang Valley. MCMC was invited to conduct the test using the upgraded data collection mobile at that time.

SEIRD together with the experts for DVB, Digital TV Labs (DTV Labs) UK, R&S and Sony Malaysia had analysed the second generation DVB transmission and discovered that the technology is more capable in terms of coverage and quality. A total of 40 participants from across Asia Pacific had taken part in the test measurements. Measurements were carried out from the 6 to 7 March 2011, and covered three regions. One of the most remote locations, Bandar Setia Alam, was found to receive good second generation DVB signals from the transmitters located in the KL Tower. Two other transmitters were located in Angkasapuri which are also not far from the KL Tower and at the same time were at the heart of Kuala Lumpur. All of the secondgeneration signals were found to provide better coverage than the first generation signals.

FORMULA 1 PETRONAS MALAYSIA CHAMPIONSHIP 2011

The world's major auto event,
Formula 1 is held in Malaysia
every year. From 8 to 10 April 2011,
SEIRD was assigned to monitor
the use of spectrum at the Sepang
International Circuit. As one of the
most prestigious events, a variety
of the latest and best technology
in the world of motorsport was
showcased during the event.
MCMC was responsible for
assigning the usage of the
spectrum and to ensure the
standard compliance for all types
of communications equipment in SIC.

During the event, SEIRD had received 63 complaints regarding tracking and radio frequency interference (RFI). Most of RFI complaints were resolved before the official event race day.

MCMC team led by SEIRD for the spectrum monitoring provision at SIC.

Postal & Courier Services

NATIONAL POSTAL STRATEGY (2010-2014)

2011 PERFORMANCE

Second year of implementation of the National Postal Strategy (NPS) saw major development and achievements on the objectives of postal and courier services through a comprehensive NPS 2010-2014 planning.

DEDECORMANCE INDICATOR

The NPS 2010-2014 development programme will continue to be based on the positive growth of the new Postal Services Act 2011 and autonomous liberalisation policy by the courier service industry, in line with the Government's Economic Transformation Plan.

ACHIEVEMENTS IN 2011

NPS has not only improved the performance in 2011, but has also driven the growth of this sector from which the dynamic changes will bring new challenges to the market, the players and regulators. Table 42 lists the main targets achieved in 2011.

......

Approved by the Senate in 21 December 2011.
Through the new Act, MCMC works to protect the Universal Postal Service.
400 Community Postmen were appointed under the Sabah & Sarawak Postal Transformation Plan
110 new outlets realised since 2010
The new service standard for domestic packaging services has been completed. MCMC has appointed the consultant to measure the performance or the packaging services.
The average achievement of the courier services was 79% in 2010.
POSM has submitted Business Contingency Plan to MCMC on 8 August 2011.
The new service standard for 2011-2015 for domestic mail has been completed.
Seminars on security and shipping of dangerous goods, and road safety will be conducted. Discussions with MITRANS is in progress to promote the development of capacity.
Ongoing pilot project in Pekan will be completed in February 2012.
To continue collaboration programmes with JKJR.

PERFORMANCE INDICATOR	ACHIEVEMENTS IN 2011
THRUST 4 - INDUSTRY GROWTH Competition provision	Competition Act 2010 will take effect on 1 January 2012. The New Postal Services Act will also cover the issue of competition.
Publishing industry facts and figures	MCMC publishes statistics twice a year.
Letter-writing competition at national level	45,000 entries received in 2011.
National postal and courier conference	Courier Industry Workshop conducted on 21 September 2011.
Overall coverage nationwide courier delivery service (percentage of population)	91% coverage of populated areas receive the shipment.
Preparation of a database of comprehensive postal and courier network	CIMS (MagicMap v2) for postal dan courier.
New courier licencing guidelines	Based on the approval of Courier Industry Development Plan draft.
New licencing regime (USO and non-USO licence)	Completed through the new Postal Act. Drafting process of Licencing Regulations is in progress.
Creating postal services financial compliance framework	Postal financial services rely on the enforcement by BNM under the new Financial Services Act for Business 2011.
National philatelic exhibition	Exhibits were displayed at the National Museum and state libraries. MCMC allocated RM500 to each Malaysian participant at the World Stamp Exhibition 2011 in Yokohama. Exhibits by participants are still being documented.
Stamp design award	Discussions are underway, stamp votes will be implemented in the first quarter of 2012 to select the most popular stamp issued in the year 2011.
THRUST 5 - INTERNATIONAL DEVELOPMENT Leading the Project Team on CA UPU Terminal Fee Governance Issues	Malaysia chaired the Group Project in every CA UPU session.
Joined the UPU Council (CA/POC)	Malaysia is an active UPU member. Became a member of several working groups and presented papers at the UPU.
Formulate policies for the liberalisation of the postal and courier sector	MICC has autonomously liberalised courier services (100% foreign equity ownership allowed) beginning 1 January 2012.
UPU Certification for International Exchange Office	Malaysia International Exchange Office at KLIA has received gold award from the UPU.
Initiate international mail electronic remittance service	Malaysia internal systems are not ready to exchange services with other countries. Exchange process with Indonesia is currently running.

Table 42 Strategic achievement in 2011 by the National Postal Strategy 2010-2014

114 ||||||||||||||

POSTAL TRANSFORMATION PLAN FOR SABAH AND SARAWAK (PTPSS)

PTPSS was officiated by YB Dato' Seri Utama Dr. Rais Yatim, Minister of Information, Communication and Culture on 13 May 2010. PTPSS is a private and public partnership initiative for a period of 2 years between MCMC and Pos Malaysia (PosM) to improve the coverage of mail delivery to homes in rural areas and improve access to basic postal services to rural communities in Sabah and Sarawak.

PTPSS is jointly funded by MCMC and PosM where MCMC funds the cost of implementation while PosM covers the operating costs. The objective of PTPSS is to bridge the postal gap in the rural parts of Sabah and Sarawak, based on the National Postal Strategy target to achieve a 95% mail delivery service to home and to reduce the ratio of post access up to 15,000 people to every postal outlet by 2014.

Under this programme, PosM will appoint Community Postmen and Community Postman Agents to improve the last-mile delivery performance and delivery coverage in rural areas with incomplete addresses. PosM will also create 10 Mobile Post Office (Post-on-Wheels). It is estimated that nearly 400,000 people in rural areas of Sabah and Sarawak will benefit from this project.

The summary of PTPSS performance is shown in Table 43.

POSTAL SERVICES ACT 2011

The Postal Services Act 2011, passed by Parliament in December 2011is intended to replace the Postal Services Act 1991 and to make new provisions for regulating the postal services industry, promote the orderly development of the industry and protect the universal postal service.

The Act also makes provisions to ensure that the postal service is offered at affordable rates with high quality services to all customers in Malaysia to ensure the continued development of the postal industry in an increasingly competitive environment.

The Act aims to promote the objectives of the National Policy for the postal services industry as follows:

- a Protect affordable and high quality universal service provision
- Promote the growth of competitive and innovative postal services
- Realise Malaysia as the major global centre and hub for postal services

- d Regulating for consumers' long-term benefits
- e Improve consumers' level of confidence in the industry and delivery of postal services

......

- f Ensure the safety of industrial workers of postal services, security goods and postal networks
- g Give feedback on the technical environment, the economy and social and consumer's demand.
- h Ensure fair competition among the parties involved in the postal services industry in Malaysia

There are four categories of regulations i.e. economic, technical, social and consumer protection regulations. MCMC role is also strengthened by ensuring that universal service can be provided on an ongoing basis, managing of the Fund Postal Service is handled better and the postcode and address system in Malaysia is improved.

	COMMUNITY POSTMAN	COMMUNITY POSTMAN AGENTS	MOBILE POST OFFICE
Sabah	204 persons	295 persons	5 units
Sarawak	198 persons	291 persons	5 units
TOTAL	402 persons	586 persons	10 units
Achievement	• A total 3,011,7	80 items handled	 34,651 transaction over the counter recorded 69 locations received weekly service

Table 43 PTPSS performance summary

.....

ANNUAL STAMP PRODUCTION 2011

The year 2011 has seen the production of interesting stamps themes in the world of philatel. Pos Malaysia has issued various stamps to commemorate important historical events and also special themes based on categories. Overall, a total of 14 stamps were issued, focusing on a variety of topics - crafts, values, sports and royal castles, as listed in Table 46.

Few events worth highlighting:

- AFF Suzuki Cup 2010 was marked as one of Malaysia historical events as this is the first time we won the trophy. Prior to this in 1996, Malaysia succeeded in getting to the finals.
- Noble Values is one of the government's initiatives to adopt and implement the values of society in Malaysia for all walks of life. The campaign aims to strengthen the identity and nature of dependence within the community.

Table 46 Themes created in 2011

COURIER SERVICES

The high performance courier service industry is an important component of a modern and high income economy country. Without an efficient network of domestic and international courier services, Malaysia will be left behind in a competitive and challenging trade and investment world. The courier sector is expected to reach RM4 billion while the total number of items is expected to increase three-fold by the year 2020, as shown in Figure 41.

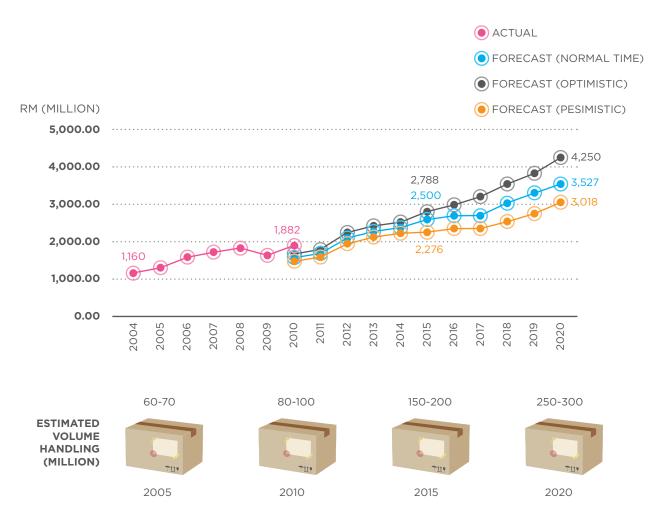

Figure 41 Projected revenue and growth of items (2010-2020)

On this basis, Malaysia has adopted a liberal licensing regime for the courier service. MCMC has issued licenses to more than 110 operators; where most of them are popular brands in the international and local levels. As a result of this liberal policy courier and economic growth for the past 30 years, Malaysia has succeeded in attracting investments from major courier operators and world-class continents.

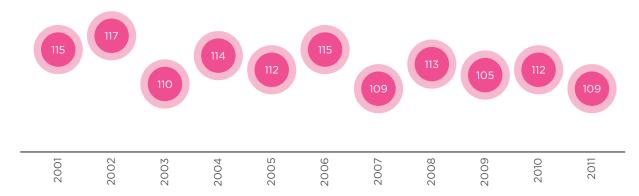

Table 42 Number of licensed courier company (2001-2011)

A total of 8 new applications were approved in 2011 to the following companies:

- a Bestline Express Services Sdn Bhd
- b Daylight First Hub Express Sdn Bhd
- c YBL International Sdn Bhd
- d SF Global Express (M) Sdn Bhd
- e Utusan Transport Sdn Bhd
- f BS Express Sdn Bhd
- g Inter GSA Freight Services Sdn Bhd
- h ADS International Express Sdn Bhd

1MALAYSIA LETTER-WRITING COMPETITION

MCMC has been instrumental in supporting the 1Malaysia initiatives. One of them was to organise 1Malaysia Letter-Writing Competition with Pos Malaysia Berhad, MICC and Ministry of Education.

The theme for 2011 required students to imagine themselves as one of the prominent freedom fighters and deliver the message to maintain independence enjoyed by Malaysians today.

The competition was opened to school students across the country to give them the opportunity to test their ingenuity and intelligence, as well as to raise awareness on the need for broader and deeper knowledge before translating them into writing.

The competition received overwhelming response with various critical and creative ideas received from the 45,788 entries – 8,957 from primary school and 36,831 from high school, which ran from 1 May 2011 to 30 July 2011.

Digital Signature

The rapid growth of the digital economy in Malaysia can be seen with the expansion of broadband lines across the country. Dramatic and sustained development has facilitated the advancement of electronic commerce or e-commerce, e-payment, e-banking and other online services. This growth is supported by the widespread of Internet access at work, home, and school. Its development has managed to increase productivity and facilitate the daily activities of Malaysians.

However, concern arises when online services are widely used without control. Issues such as identity theft and online fraud have been widely reported in the media at this time. Most of the security features used online now (username and password) are not able to provide optimum safety to the users of online services.

To increase the level of safety and confidence in cyberspace or online, Public Key Infrastructure (PKI), which is monitored by MCMC will help consumers and organisations to prevent identity theft and other online fraud incidents. PKI is subject to the Digital Signature Act 1997, an act designed to put the country on a strong foundation in the field of ICT and improving consumer and business confidence in dealing with virtual or online incidents. The use of digital signatures under the

Digital Signature Act 1997 is subject to the procedures prescribed by the law and has the effect of 'nonrepudiation'. Therefore, digital signatures have the highest level of trust from the use of electronic signatures, such as the use of a PIN, username and password.

......

Figure 43 shows the hierarchy of identity in cyberspace to ensure the safety of electronic applications in the market.

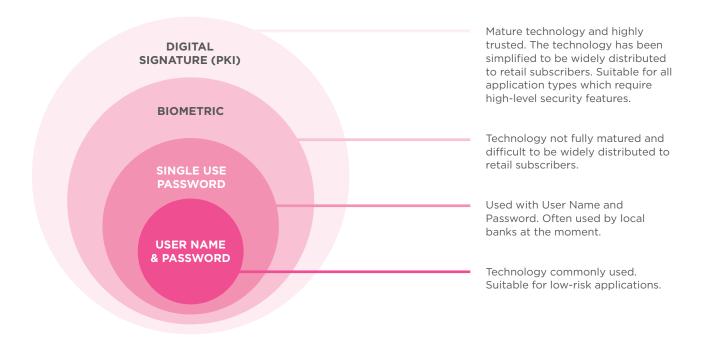

Table 43 Hierarchy of Self Identification in virtual world

To ensure the effectiveness of the certification authorities in distributing digital signature certificates, MCMC also ensures that a reliable system is used to issue them. The certification authorities are also required to meet the preconditions set out in the DSA 1997 before issuing any digital certificates to subscribers. These strict conditions are necessary to ensure a high level of integrity among the certification authorities in Malaysia. To date, no cases are reported by any party to MCMC with regards to integrity breach by the certification authorities and the digital signatures issued by them.

For this purpose, the certification authorities are required to carry out annual performance audit by auditors with expertise in the field of computer safety as acknowledged by MCMC. The performance audit report of certification authorities for 2010 is as follows:

- a Digicert Sdn Bhd achieved full compliance in all mandatory areas of control; and
- b MSC Trustgate Sdn Bhd achieved full compliance in five areas of control and good compliance for the other areas. For those areas of control that received good compliance, MCMC requested them to submit a monthly report until they managed to resolve the comments by their appointed auditors.

MCMC also played a role in promoting the use of digital certificate in the public and private sector which was on the rise from year to year. In 2010, the number of digital certificates had already surpassed 3.5 million compared to 2 million in 2008, representing more than 75% increase during the two-year period. 92% of the digital certificates were issued by Digicert Sdn Bhd while the remaining by MSC Trustgate Sdn Bhd. Figure 44 shows the growth of digital certificates in Malaysia.

The use of PKI in Malaysia is yet to achieve widespread status. However, a paradigm shift towards the use of PKI is beginning to be felt following the development of several high impact projects where MCMC serves as the technical advisory body. The said projects are:

a "Mobile PKI" for the rollout of banking application and payment made through mobile phone (if successfully rolled out, this will even further boost the use of digital certificate as the mobile phone's penetration rate has surpassed 100% in Malaysia).

 Establishing guidelines to enable digital certificates issued by ASEAN countries adopted among them especially in the ASEAN Single Window application that will facilitate the exchange of documents between Customs.

Through the introduction of Mobile PKI project, MCMC also expected that the use of PKI in Malaysia will increase in line with the number of Internet banking users which stands at 10.2 million. However, this increase may not happen overnight, but instead it will be gradually realised.

Figure 44 Growth of Digital Signature Certification issued by the Certification Authority in Malaysia

Empowering A Smart Community

A knowledgeable and self-reliant community will encourage the formation of a competitive society that is ready to face challenges.

- INTERNATIONAL AFFAIRS
- CORPORATE COMMUNICATION

Organisational Development

.....

MCMC had adopted the Blue Ocean Strategy in 2010 as one of the methods to improve its strategic performance management practices. Accordingly, a programme was implemented in 2011 to identify initiatives that should be given priority by MCMC. A group session involving senior and middle management was held to clarify, align and get consensus on all strategic initiatives that have been identified. It also aimed to create awareness on interdependencies and opportunities for more crossfunctional collaboration. This process has indirectly ensured the understanding and capability of existing talent to be in line with the strategic objectives and core values of MCMC.

The programme has also led to the development and adoption of a new competency-based performance management and development system (ACHIEVE). In addition, the career management system for non-executive employees (CDPT) was also introduced. This is to ensure that MCMC has the right talent to drive the organisation towards the targets set. In developing the concept and the new policy, a session with the stakeholders i.e. staff, members of the MCMC's Departmental Council and senior management was held with the objective to propose a holistic plan for improvement. As a result, constructive feedback was given on top of the buy-in from the target group.

This effort has strengthened MCMC's mission to give emphasis or priority in enhancing the performance, success rate, reliability and transparency of the organisation. It also marks the continuation of the implementation and enforcement of policies on a couple of core functions and organisational support.

With the radically changing and ever-evolving online communications landscape and digital technological advances, MCMC will also introduce a new Human Capital Portal as a measure to improve the delivery of existing human capital system. This portal is scheduled to launch in the first quarter of next year.

....

Human Capital Development

In 2011, the Human Capital Management Division has focused on increasing the capacity and performance of talent to support the initiatives undertaken by MCMC.

A total of 31 employees were identified to hold higher position and were given broader and more challenging scope of work to achieve all of MCMC's key performance indicators (KPIs) and objectives.

Improvement initiatives with regards to the management of talent and career development support level will open up opportunities for all support staff to increase their knowledge, improve efficiency and enhance their ability to perform their responsibilities at greater capacity in all divisions and departments.

Adjustments have been made at the support staff level based on the three career management portfolio, according to departments and specialty groups. The implementation will be carried out early 2012, starting with 42 employees from support level. This initiative is also a follow-up to the Broadbanding programme that has been implemented for the executives in the previous year. Aimed to polish their talent and potential internal workforce, this move is expected to strengthen support for MCMC. Recognition will also be given to the deserving personnels after the implementation of this programme. Beginning 2011, MCMC has introduced MCMC Competency Model for staff at support level as a measure to empower the Commission Performance Management System (ACHIEVE).

Recognising the importance of maintaining existing talent and attracting new talent, a total of 147 new talents have been identified to join MCMC of which 50% represent the executives and non-executives group respectively. The year 2011 also saw the success of the Human Capital Management Division when the ranks and grades of 42 members of MCMC have been increased.

From the efforts undertaken, MCMC has managed to record a lower Employee Turnover rate at 5.0%, as compared to Malaysia's Employee Turnover Rate* of 15.7% in 2010.

MCMC Academy

The Commission recognises the importance of human capital as one of the key components to enhance competitiveness. Through training and learning programmes, MCMC will shape the workforce into becoming more effective, knowledgeable, skilled and competent in executing their duties.

In line with this objective, the MCMC Academy has devised and implemented strategic initiatives such as the:

Content Creation, Learning Development

Research programmes and incentives to adopt best practices in maximising the capability and collective competitiveness in the field of multimedia communication for MCMC, industry and consumers.

Planning, Implementation & Development

Plan, organise and control the overall structure and development which includes four major task cycles - analysis, design and development, implementation and evaluation.

Collaboration & Strategic Learning

Exchange of information and ideas through strategic collaboration with identified parties that can improve performance and results.

In 2011, MCMC Academy has shown remarkable success when the number of entries per employee were recorded at 93.71%, well above the target of 65% by 7 days of training per employee as determined by the Ministry of Information, Communication and Culture. Details are shown in Tables 45 and 46.

Category	Total of F	Programme	Total of Participation		Total Training Days			
	2010	2011	2010	2011	2010	2011

Table 45 Comparison of training and development achievements in 2010 and 2011

Item	2010	2011
Average total of training days for each employee	6.3 days	6.6 days
Achievement (based on target of 7 days for each employee)	90.00%	93.71%

Table 46 Comparison of the number of training days for each employee and development achievements in 2010 and 2011

Comparison of Key Performance Indicator (KPI) in the following quarters with development achievements in 2011 is also shown in Figure 47.

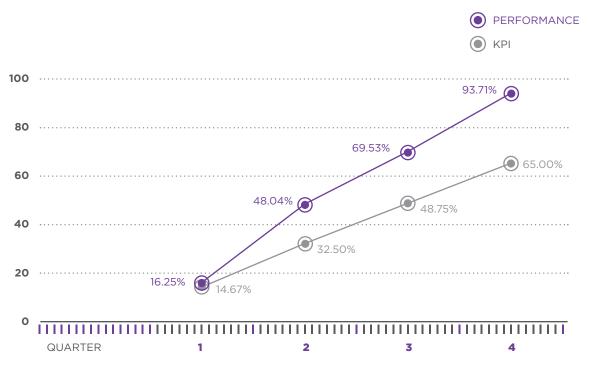

Figure 47 Comparison of the percentage of quarterly indicators (KPIs and Performance 2011)

In line with efforts to develop the communications and multimedia industry, MCMC is now taking proactive measures to provide training to the workforce engaged in critical areas in Malaysia. To ensure the effectiveness of implementation, MCMC Academy's roles and responsibilities were expanded in 2012 with emphasis on development of various fields of telecommunications and the multimedia industry in Malaysia, and are not limited to members of MCMC's workforce.

Strategic Information System

The Strategic Information System Department (SISD) has been active in performing its role as a strategic partner in the field of IT infrastructure and application systems, including:

MCMC EXAMINATION MANAGEMENT SYSTEM

MCMC Examination Management System manages the Radio Amateur Examination (RAE) and Morse Code (CW) Examination in a more effective manner. The system allows the public to register for examinations online and purchase the exam vouchers to pay for the examination fee through the "ePayment" service. Applicants or examinees can also check the status of their application and the results online.

USP MONITORING SYSTEM

USP Monitoring System (UMS) is a system to regulate and monitor the availability and the activities of CBLs and the CBCs. The acquired data are used to help plan the USP projects in the future. This system is also able to produce a detailed report on the activities of the CBLs and the CBCs needed by the Department of Statistics and other related departments.

COMMUNICATION INFRASTRUCTURE MANAGEMENT SYSTEM (CIMS)

Mapping Information System (GIS) is used to regulate and monitor the development of the communications infrastructure in Malaysia. It is a platform that is integrated with other applications such as system Spectrum Inventory Management System (SIMS), Complaints Management System, Postal & Courier Services data sets, Internet Service Provider, the numbering and the rate of payment and the record of the USP Fund.

MCMC INTEGRATED

FINANCIAL SYSTEM (SIFS) Upon completion of this system, it will help to regulate the governance and financial of MCMC and the USP Fund. It is an integrated platform related to MCMC expenses and collection of revenues such as Spectrum Management System (SIMS), License Management System (ELMS), Universal Service Provision Fund Collection System (eFund), Online Payment Systems (ePayment) and MCMC Personnel Management System (KAIZENHR).

IT INFRASTRUCTURE IN NEW MCMC OFFICES (PRIMA1 AND BSAS)

The year 2011 also saw a number of new MCMC operational offices being opened, namely in Cyberjaya Prima 1 and Sultan Abdul Samad Building. SISD has installed VoIP (Voice over Internet Protocol) for both of the offices.

NETWORK OPTIMISATION MONITORING SYSTEM

This system serves to regulate the network quality offered by communication service providers. The system is able to identify the quality of networks in the area, coverage and service disruption. The system also displays the data in the form of mapping integrated with Google map.

Knowledge Management & Resource Centre

Knowledge Management & Resource Centre is divided into three departments – The Department of Statistics (STAT), Market Research Department (MRD) and the Knowledge and Resource Centre (KRC).

DEPARTMENT OF STATISTICS

As a reference point for statistics, the Department of Statistics has carried out numerous activities involving the communications and multimedia industry, postal and courier services as well as digital signatures. This department collects data which is divided into two, namely primary data and secondary data. Primary data is data collected from users of the services while the secondary data is gathered through customer records maintained by service providers in the country. Both types of data are important to provide an accurate picture of the sectors mentioned above.

The primary data is gathered through scientific research conducted at the centre of the MCMC Data Collection Centre (CATI) located at Wisma Pahlawan, Kuala Lumpur. This study captures data from users via computer-assisted telephone. Since its inception, MCMC CATI Centre has attracted the interest of researchers and in 2011 the centre has received

a delegation from Universiti Kebangsaan Malaysia (UKM).

In 2011, the Department of Statistics has conducted a total of 6 studies. 2 of them were annual surveys, namely the Mobile Consumer Study 2011 and Study of Internet Usage at Home 2011, which aimed to report the usage rates of mobile phones and the Internet in Malaysia. Data obtained from these studies are analysed by statisticians and are published on annual basis, which in turn will be used by local and international researchers. The other 4 studies measured the rate of household broadband penetration and involved Prepaid Mobile Broadband, Mobile Broadband Study, Broadband over Mobile, and WiMAX Broadband Users Survey. Through these studies, it was discovered that the household broadband penetration rate in 2011 has reached 62.3%, which is 2.3% above the target of 60% set. The Department is also working with the Implementation Coordination Unit (ICU) to study the effectiveness of 1Malaysia Computer programme.

Among the secondary data obtained from industry players and related parties are the number of broadband subscriptions, mobile phone, fixed line phone, public phone, digital signature subscription, post offices, postal workforce, the

coverage of the postal service, postal vehicles, traffic, tariffs, and other related numbers. These data are also reported and published in the bilingual statistical information book on a quarterly and half-year.

Since 2010, the statistical information booklet has been presented in a more user-friendly format since 2010 to attract more readers and analysts to read it.

From 2008 onwards, the Department of Statistics has represented MCMC as General Secretary for the Asia-Pacific Internet Research Alliance (APIRA). The department has also achieved another remarkable success when elected as Chairman to represent MCMC for the second meeting of the ITU Expert Group for Telecommunication Indicators (EGTI) in 2011.

DEPARTMENT OF MARKET RESEARCH

Communication and multimedia is an industry that is constantly evolving and has a high level of competitiveness, in line with advancements in technology. Thus, monitoring and research on market trends have been made a priority to ensure that the industry continues to thrive in Malaysia.

The Department of Market Research is assigned to implement the study in accordance with the current industry requirements, and on the topical areas through the provision of market research report as a platform to exchange views and the latest information in the relevant industry. The studies conducted are published in various formats of print or electronic media, including Summary of Industry Trends Report (BIT), Industry Performance Report (IPR)

Among reports published by Department of Statistics.

and MyBroadband newsletter. In addition, the Department of Market Research has also sponsored the Opportunities through ICT Broadband Conference.

The publication of the Industry Trends Report (BIT) seeks to report and discuss areas of topical and current developments in the communications and multimedia industry by focusing on the development of the industry outside of the country or matters that affect the development of the market in Malaysia. This report is published twice a year.

INDUSTRY PERFORMANCE REPORT

The annually published Industry Performance Report reviews current trends, developments and technological advances in communications and multimedia services in Malaysia and around the globe.

This report also incorporates the economic and financial performance of the communications industry sectors that can serve as a guide to bridging the digital divide by identifying the industry access indicators, licensing activities, consumer protection measures and programmes to provide universal services.

.....

CONFERENCE ON OPPORTUNITIES THROUGH ICT BROADBAND On 24 and 25 May 2011 at MCMC Cyberjaya, the Market Research Department has organised a Conference on Opportunities through ICT Broadband. The conference lasted for two days and was one of the initiatives that have been planned by MCMC for the Industrial Development Series Programme. At the conference, the Industrial Development Series Programme was also launched by the Minister of Information, Communications and Culture of Malaysia, Dato' Seri Utama Dr. Rais Yatim in the presence of the delegates of the communications and multimedia industry.

The conference aims to create a healthy business portal for ICT companies besides driving the growth of the economy under the Economic Transformation Programme (ETP), the New Economic Model (NEM) and the 10th Malaysia Plan (10MP).

A total of 19 local and international speakers have been invited to discuss the topics related to opportunities through ICT broadband and their success stories in leading this industry.

The conference drew 200 participants from the members of the industry, investors, institutions, vendors, and multimedia communication licencees from inside and outside of the country. The conference also received encouraging participation from companies promoting telecommunications, electronics, software, banking and others.

KNOWLEDGE & RESOURCE CENTRE

MCMC Knowledge & Resource Centre is open to the public and stores the latest information on the communications and multimedia industry in print media, secondary media storage or online. Offering a collection of over 4,500 titles in 2011, this resource centre also conducts activities related to MCMC Knowledge Management Initiatives and provides Internet services to its users. The portal can be accessed at the resource centre or by visiting http://librarysvr.cmc.gov.my/ or http://www. skmm.gov.my/Commission.

Operating for more than 12 years, it has attracted many users especially MCMC staff, researchers and students. SearchHub, an easier and faster way to search for information is capable of displaying results from related industry portals and the public domain. In 2011, a number of 28,000 searches were recorded.

In implementing the third strategy of MCMC Knowledge Management Initiatives i.e. 'The sharing of knowledge from courses attended with other staff who perform similar tasks', 4 sessions of Sharing the Jewel were conducted in 2011.

Through the fourth strategy -'Promoting networking/informal relationship between those in need and those who give', a total of 13 sessions of the Tea Talk@3 were conducted in the year 2011. Most of the presenters featured MCMC's staff and were conducted casually. It has attracted the interest of many staff to attend and gain knowledge, especially in the telecommunications and multimedia field. Tea Talk@3 sessions have been recorded and published in compact discs format as a reference in the future.

MCMC Knowledge & Resource Centre.

(dot)myConvergence Magazine, published two times a year, is one of the department's notable achievements in providing information through articles related to the telecommunications and multimedia industry. The magazine which features articles written by MCMC employees and industry representatives is also a useful reference document for local readers as well as those from abroad. It can be accessed via http://www.myconvergence.com.my.

.myCONVERGENCE magazine published by MCMC.

International Affairs

MCMC participates actively in the international forums to promote Malaysia's interest in the communications and multimedia industry. A close partner with the Ministry of Information, Communications and Culture (MICC), MCMC represents the Malaysian regulatory authority for the communications and multimedia sector; and at the same time building the country's international profile through participation in international activities.

MCMC's international activities are guided by the Communications and Multimedia Act 1998, in particularly the first National Policy Objective for facilitating Malaysia's transformation into an industry global hub.

Consequently MCMC engages with various international organizations as listed in the Ministerial Direction issued under Section 269 of the Act.

The purpose of MCMC's participation in various international activities and forums is to:

- Aid local communications and multimedia industry to identify expansion opportunities in foreign markets; and
- Manage progressive market liberalisation of the communications and multimedia sector;
- Influence outcomes and developments at international level through positions held and papers or views presented; and
- To keep up-to-date with the latest international developments and trends in the communications and multimedia sector.

MCMC works synergistically with its counterparts in the region as well as internationallyto enhance regulatory measures and best practices towards mutual industry competitiveness and growth, as well as facilitate inbound and outbound investments and trade and to develop network and human resource capabilities in the communications and multimedia arena. MCMC is further involved as the sectorial expert in various bilateral and multilateral negotiations such as Free Trade Agreements and **Economic Partnership Agreements** lead by the Ministry of International Trade and Industry and MICC. In terms of functional focus areas, MCMC's international activities can be divided into the following:

- Management of frequency, numbering and internet addressing
- Standards and Interoperability
- Mutual Recognition Arrangements
- Trade and Liberalisation
- Security and Harmonization of e-commerce and cyber security activities
- Content Cooperation and information exchange

Sectorially, International Activities can be divided along geopolitical and economic lines such as:

1 ASEAN

- ASEAN Telecommunications Regulators' Council Meeting (ATRC)
- Telecommunications and IT Senior Officials Meeting (TELSOM)
- Telecommunications and IT Ministers' Meeting (TELMIN)

 Border Coordination Meetings to manage and resolve any frequency interference and allocation matters with our neighbours:

......

- a Frequency Allocation
 Committee of Singapore,
 Malaysia and Brunei
 (FACSMAB)
- b Joint Technical Committee on Coordination and Assignment of Frequencies along the Malaysia-Thailand Common Border (JTC)
- c Joint Coordination Committee between Malaysia and Indonesia (JCC)
- d Trilateral coordination involving Indonesia,
 Malaysia and Singapore

2 ASIA PASIFIC

- Asia Pacific Telecommunity (APT)
- APEC Telecommunications
 Working Group (APEC TEL)
- Asia Pacific Postal Union (APPU)

3 INTERNATIONAL/ INTERGOVERNMENTAL ORGANISATIONS

- International Telecommunications Union (ITU)
- Universal Postal Union (UPU)
- Internet Corporation for Assigned Names and Numbers (ICANN)

In summary, MCMC had participated in a total of 114 conferences and meetings in 2011 as well as received 12 foreign delegations on study/working visits. However, the majority of the work in 2011 was focused on the ASEAN sector with Malaysia as the host of the event.

10TH ASEAN **TELECOMMUNICATIONS AND** IT MINISTERS MEETING

Malaysia was the host of the 10th ASEAN Telecommunications and IT Minister's Meeting (10th ASEAN TELMIN) which was held from 13-14 January 2011. The TELMIN was formed in 2001 as a result of a decision to create stronger regional ties within the telecommunications and IT fraternity within ASEAN. TELMIN meets once a year and includes sessions with the ASEAN Dialogue Partners (China, Japan, Korea and India). The inaugural ASEAN TELMIN was first held in Kuala Lumpur, and Malaysia was again given the honour to host the 10th meeting of TELMIN (10th ASEAN TELMIN). In keeping with the established ASEAN tradition, the TELMIN Chair rotates annually and it is the usual practice for the in-coming chair to host the annual meeting, hence Malaysia took over the Chairmanship of the TELMIN for the 2010-2011 work cycle.

The 10th TELMIN Meeting was launched by YAB Dato' Sri Najib Tun Razak, the Prime Minister of Malaysia. In his keynote address, YAB Prime Minister emphasized the importance of telecommunications and ICT as the primary enabler for economic development and growth. YAB PM highlighted the development of the industry in Malaysia due to a number of major changes to the ICT landscape, policy reforms and liberalisation of the telecommunications and broadcast sectors. YAB Prime Minister reiterated the need for the ASEAN Member States to address the new challenges

brought about by the advancement of ICT such as cyber-threats, ethics of Internet use for the preservation of ASEAN cultural roots and values so that all citizens and children of the region can benefit from the Internet.

Prime Minister YAB Dato' Sri Mohd Najib Tun Razak further commended the 10th ASEAN TELMIN for choosing "ICT: Positioning ASEAN for the Future" as the theme for the meeting as it highlighted the role of ICT in achieving the ASEAN Community by 2015. YAB Prime Minister welcomed the TELMIN initiative to consider and adopt the ASEAN ICT Masterplan 2015 with the vision of "Towards an **Empowering and Transformational** ICT: Creating an Inclusive, Vibrant and Integrated ASEAN".

The ASEAN 10th TELMIN among others adopted and approved the work plan for 2010-2011 as well as the ASEAN ICT Masterplan 2015 (AIM2015); which charts the development of ICT for the next five years in ASEAN, and tasked the ASEAN Telecommunication and IT Senior Officials (TELSOM) and the ASEAN Telecommunication Regulators' Council to take necessary steps to implement the actions and measures of the AIM2015.

LAUNCH OF THE ASEAN ICT MASTERPLAN 2015

The highlight of the 10th ASEAN TELMIN was the launch of the ASEAN ICT Masterplan 2015 or AIM 2015. The ASEAN ICT Masterplan 2015 (AIM2015) charts ASEAN's strategy for ICT growth and development leading up to the establishment of

the ASEAN Economic Community in 2015. It is an integrated approach which supports other sectors of the economy and is in line with the

- ASEAN Charter
- **ASEAN Economic Community** Blueprint; and
- The Roadmap for an **ASEAN Community**

The AIM2015 outlines six strategic thrusts to support four key outcomes. The strategic thrusts are:

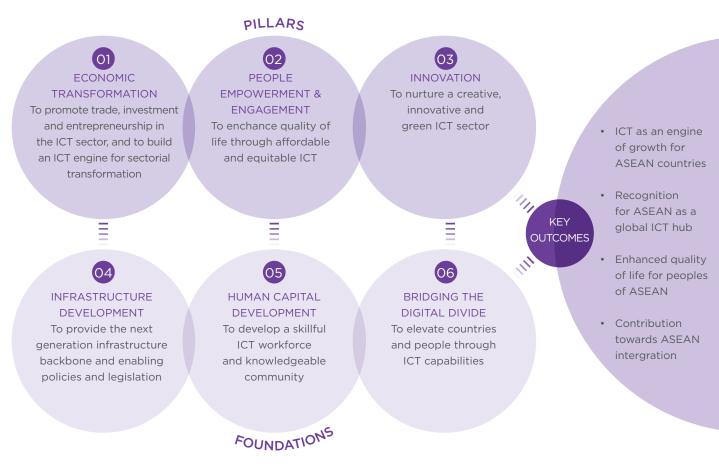

- 1 Economic Transformation
- 2 People Empowerment and Engagement
- 3 Innovation
- 4 Infrastructure Development
- 5 Human Capital Development
- 6 Bridging the Digital Divide

The four key outcomes are:

- · ICT as an engine of growth for ASEAN countries
- · Recognition for ASEAN as a global ICT hub
- Enhanced quality of life for peoples of ASEAN
- Contribution towards ASEAN integration

A symbolic launching ceremony was held toward the end of the 10th TELMIN whereby the 10 ASEAN TELMIN ministers or their representatives and the representative of the ASEAN Secretariat, were invited to place their right palms on a circular panel with their country's flag dubbed "the circular of solidarity". The event was witnessed by about 500 guests.

Figure 48 ICT ASEAN 2015 Masterplan

11th ASEAN TELECOMMUNICATIONS AND IT SENIOR OFFICIALS MEETING

The 11th ASEAN Telecommunications and IT Senior Officials Meeting (11th ASEAN TELSOM) was held prior to the 10th TELMIN from 10-12 January 2011. Similar to TELMIN, the TELSOM is a regional platform to tackle wide-ranging issues concerning telecommunications and IT and comprises senior Telecommunications and IT Officials duly designated from each of the

10 ASEAN Member States. In keeping with the established practice, as host of the meeting, Malaysia took over the Chairmanship of the ASEAN TELSOM for the work cycle 2010-2011.

The 11th TELSOM among others considered and endorsed the final text of the ASEAN ICT Masterplan 2015 as well as the projects for implementation during the 2010-2011 cycle. As the 2010-2011 work cycle was the first year of implementation for the AIM 2015, focus has been

towards putting the building blocks in place to kick-start the various initiatives and actions in the AIM2015. Although many of these initiatives and actions are due to be completed over the next three to four years, the initial steps are important to ensure delivery in a timely manner. Many projects have been undertaken in the 2010-2011 cycle towards this with an emphasis on:

• Realignment of the ASEAN TELMIN institutional structure

- · Synergising TELSOM and ATRC work group functions in line with the 6 strategic thrusts
- · Review of financial procedures to expedite implementation
- Infrastructure development
 - Setting-up an Infrastructure Task Force
 - Initialising the ASEAN Broadband Corridor and ASEAN Internet Exchange
 - Establishment of the ASEAN Network Security Action Council
- Economic Transformation
 - Focus on SME adoption of ICT
- People Empowerment and Engagement
 - · Reducing mobile roaming charges - first bilateral arrangement implemented between Malaysia and Singapore on 1 May 2011
 - ATRC Record of Intent adopted to spur reductions of intra-ASEAN mobile roaming charges
- Innovation
 - · Establishment of the ASEAN **TELMIN ICT Awards**
 - Setting up the ASEAN CIO Forum
- Bridging the Digital Divide (BDD)
 - Setting-up the ASEAN **BDD Task Force**
 - Comprehensive review of Universal Service Frameworks in ASEAN
 - · Inclusion of broadband into Universal Service provisioning
 - Prioritising community access and roll-out to schools

REDUCTION OF MOBILE ROAMING RATES

On 20 April 2011, Malaysia and Singapore announced the successful conclusion of discussions to progressively reduce bilateral roaming rates between the two countries. This initiative follows a joint announcement made by Y.B. Dato' Seri Utama Dr. Rais Yatim, Minister of Information, Communications and Culture, Malaysia and the then Minister for Information, Communications and the Arts, Singapore, H.E. Lui Tuck Yew and in June 2010, that both countries were committed to explore ways in reducing the prevailing roaming rates for mobile phone users. Since then, MCMC has worked closely with IDA and mobile operators from both sides of the causeway to bring about these reductions.

Hence as of 1 May 2011, Malaysian mobile phone subscribers will see price reductions of up to 30% for voice calls and 50% for SMSes, when they roam in Singapore and vice-versa.

44TH APEC TELECOMMUNICATIONS AND INFORMATION WORKING GROUP

Some 220 delegates from 20 of the 21 APEC economies as well as officials and representatives from international organisations as well as telecommunications and ICT companies attended the 44th APEC Telecommunications and Information Working Group (TEL) from 22-28 September 2011 in Kuala Lumpur. The meeting was jointly hosted by the Ministry of Information Communications and Culture as well as the Malaysian Communications and Multimedia Commission. Y.Bhg. Dato' Sri

Kamaruddin Siaraf, Secretary General of the Ministry of Information, Communications and Culture opened the meeting. In his remarks, he reiterated the need for APEC economies to bilaterally or multilaterally strengthen political and diplomatic cooperation in addressing privacy and security challenges brought about by the exponential adoption of ICT and social media in the APEC countries.

The APEC TEL 44 member economies and their partners deliberated on matters relating to telecommunications and ICT policy and regulation ranging from liberalisation to green ICT and disaster management as well as consumer protection. Cybersecurity however remains a major focus for APEC TEL in trying to strengthen network infrastructure within the APEC region. Increasing issues of privacy and security have made it necessary for APEC TEL to maintain cybersecurity as an agenda at their bi-annual meetings in order to streamline with the overall APEC objective to promote trade, investment, liberalisation and economic growth in the region.

The APEC TEL 44 represents the start of a new two-year term for the new Chair (Japan) and Vice-Chair (Malaysia). Both countries will helm the APEC TEL Working Group until 2013.

Proceeds from disposal of plant and equipment	5	302
Net cash generated from investing activities	30,683	33,139
Net increase in cash and cash equivalents	272,752	321,206
Cash and cash equivalents at 1 January	1,783,780	1,462,574
Cash and cash equivalents at 31 December (Note 5)	2,056,532	1,783,780

Notes to The Financial Statements

PRINCIPAL ACTIVITIES

The principal activities of the Malaysian Communications and Multimedia Commission are to implement and to enforce the provisions of the communications and multimedia laws as stipulated in the Communications and Multimedia Act (CMA) 1998 and the Malaysian Communications and Multimedia Commission Act (MCMCA) 1998.

The address of the principal place of business is as follows:

Principal place of business

63000 Cyberjaya Selangor Darul Ehsan

The financial statements were approved by the Commission's Members on 30 August 2012.

1 BASIS OF PREPARATION

a Statement of compliance

These financial statements have been prepared in accordance with Financial Reporting Standards (FRS) and accounting principles generally accepted in Malaysia.

The Commission has not applied the following accounting standards, amendments and interpretations that have been issued by the Malaysian Accounting Standards Board (MASB) but are not yet effective for the Commission:

FRSs, Interpretations and amendments effective for annual years beginning on or after 1 July 2011

- IC Interpretation 19, Extinguishing Financial Liabilities with Equity Instruments
- Amendments to IC Interpretation 14, Prepayments of a Minimum Funding Requirement

FRSs, Interpretations and amendments effective for annual periods beginning on or after 1 January 2012

- FRS 124, Related Party Disclosures (revised)
- IC Interpretation 15, Agreements for the Construction of Real Estate
- Amendments to FRS 1, First-time Adoption of Financial Reporting Standards Severe Hyperinflation and Removal of Fixed Dates for First-time Adopters
- Amendments to FRS 7, Financial Instruments: Disclosures Transfers of Financial Assets
- Amendments to FRS 112, Income Taxes Deferred Tax: Recovery of Underlying Assets

FRSs, Interpretations and amendments effective for annual periods beginning on or after 1 July 2012

Amendments to FRS 101, Presentation of Financial Statements - Presentation of Items of Other Comprehensive Income

FRSs, Interpretations and amendments effective for annual periods beginning on or after 1 January 2013

- FRS 10, Consolidated Financial Statements
- FRS 11, Joint Arrangements
- FRS 12, Disclosure of Interests in Other Entities
- FRS 13, Fair Value Measurement
- FRS 119, Employee Benefits (2011)
- FRS 127, Separate Financial Statements (2011)
- FRS 128, Investment in Associates and Joint Ventures (2011)
- IC Interpretation 20, Stripping Costs in the Production Phase of a Surface Mine

.....

1 BASIS OF PREPARATION (continued)

a Statement of compliance (continued)

FRSs, Interpretations and amendments effective for annual periods beginning on or after 1 January 2013 (continued)

 Amendments to FRS 7, Financial Instruments: Disclosures - Offsetting Financial Assets and Financial Liabilities

FRSs, Interpretations and amendments effective for annual periods beginning on or after 1 January 2014

 Amendments to FRS 132, Financial Instruments: Presentation - Offsetting Financial Assets and Financial Liabilities

FRSs, Interpretations and amendments effective for annual periods beginning on or after 1 January 2015

- FRS 9, Financial Instruments (2009)
- FRS 9, Financial Instruments (2010)
- Amendments to FRS 7, Financial Instruments: Disclosures Mandatory Date of FRS 9 and Transition Disclosures

The financial statements of the Commission for the annual period beginning on 1 January 2012 will be prepared in accordance with the Malaysian Financial Reporting Standards (MFRSs) issued by the MASB and International Financial Reporting Standards (IFRSs). As a result, the Commission will not be adopting the above FRSs, Interpretations and amendments.

b Basis of measurement

The financial statements have been prepared on the historical cost basis other than as disclosed in Note 2.

c Functional and presentation currency

These financial statements are presented in Ringgit Malaysia (RM), which is the Commission's functional currency. All financial information presented in RM has been rounded to the nearest thousand, unless otherwise stated.

d Use of estimates and judgements

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised and in any future periods affected.

There are no significant areas of estimation uncertainty and critical judgements in applying accounting policies that have significant effect on the amounts recognised in the financial statements.

Notes to The Financial Statements

2 SIGNIFICANT ACCOUNTING POLICIES

The accounting policies set out below have been applied consistently to all periods presented in these financial statements, and have been applied consistently by the Commission, unless otherwise stated.

Financial Instruments

Initial recognition and measurement

A financial instrument is recognised in the financial statements when, and only when, the Commission becomes a party to the contractual provisions of the instrument.

A financial instrument is recognised initially, at its fair value plus, in the case of a financial instrument not at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue of the financial instrument.

ii Financial instruments categories and subsequent measurements

The Commission categorises financial instruments as follows:

- Financial assets
- · Loans and receivables

Loans and receivables category comprises fees and other receivables and cash and cash equivalents.

Financial assets categorised as loans and receivables are subsequently measured at amortised cost using the effective interest method.

All financial assets are subject to review of impairment (see Note 2(e)(i)).

Financial liabilities

All financial liabilities are subsequently measured at amortised cost using the effective interest method.

iii Derecognition

A financial asset or part of it is derecognised when, and only when the contractual rights to the cash flows from the financial asset is transferred to another party without retaining control or substantially all risks and rewards of the asset. On derecognition of a financial asset, the difference between the carrying amount and the sum of the consideration received (including any new asset obtained less any new liability assumed) and any cumulative gain or loss that had been recognised in equity is recognised in the statement of income and expenditure.

2 SIGNIFICANT ACCOUNTING POLICIES (continued)

a Financial Instruments (continued)

iii Derecognition (continued)

A financial liability or a part of it is derecognised when, and only when, the obligation specified in the contract is discharged or cancelled or expires. On derecognition of a financial liability, the difference between the carrying amount of the financial liability extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in the statement of income and expenditure.

b Property, plant and equipment

i Recognition and measurement

Items of property, plant and equipment are stated at cost less accumulated depreciation and any accumulated impairment losses.

Cost includes expenditures that are directly attributable to the acquisition of the asset and any other costs directly attributable to bringing the asset to working condition for its intended use, and the costs of dismantling and removing the items and restoring the site on which they are located. Purchased software that is integral to the functionality of the related equipment is capitalised as part of that equipment.

When significant parts of an item of property, plant and equipment have different useful lives, they are accounted for as separate items (major components) of property, plant and equipment.

Gains and losses on disposal of an item of property, plant and equipment are determined by comparing the proceeds from disposal with the carrying amount of property, plant and equipment and are recognised net within "other income" or "other expenses" respectively in the statement of income and expenditure.

ii Subsequent costs

The cost of replacing part of an item of property, plant and equipment is recognised in the carrying amount of the item if it is probable that the future economic benefits embodied within the part will flow to the Commission and its cost can be measured reliably. The carrying amount of the replaced part is derecognised. The costs of the day-to-day servicing of property, plant and equipment are recognised in the statement of income and expenditure as incurred.

iii Depreciation

Depreciation is calculated over the depreciable amount, which is the cost of an asset, or other amount substituted for cost, less its residual value.

Notes to The Financial Statements

2 SIGNIFICANT ACCOUNTING POLICIES (continued)

b Property, plant and equipment (continued)

Depreciation is recognised in the statement of income and expenditure on a straight-line basis over the estimated useful lives of each part of an item of property, plant and equipment. Freehold land is not depreciated. Capital work-in-progress are not depreciated until the assets are ready for their intended use.

The estimated useful lives for the current and comparative periods are as follows:

 Office and communication equipment 6 - 7 years Computer equipment 3 - 5 years Furniture and fittings 6 - 7 years Motor vehicles 5 years Building 50 years

Depreciation methods, useful lives and residual values are reviewed, and adjusted as appropriate at the end of the reporting period.

c Fees and other receivables

Fees and other receivables are categorised and measured as loans and receivables in accordance with Note 2(a)(ii).

d Cash and cash equivalents

Cash and cash equivalents consist of cash on hand, balances and deposits with licensed banks and highly liquid investments which have an insignificant risk of changes in value.

Cash and cash equivalents are categorised and measured as loans and receivables in accordance with policy Note 2(a)(ii).

Impairment of assets

i Financial assets

All financial assets are assessed at each reporting date whether there is any objective evidence of impairment as a result of one or more events having an impact on the estimated future cash flows of the asset. Losses expected as a result of future events, no matter how likely, are not recognised.

An impairment loss in respect of loans and receivables is recognised in the statement of income and expenditure and is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows discounted at the asset's original effective interest rate. The carrying amount of the asset is reduced through the use of an allowance account.

If, in a subsequent period, the fair value of a debt instrument increases and the increase can be objectively related to an event occurring after the impairment loss was recognised in the statement of income and expenditure, the impairment loss is reversed, to the extent that the asset's carrying amount does not exceed what the carrying amount would have been had the impairment not been recognised at the date the impairment is reversed. The amount of the reversal is recognised in the statement of income and expenditure.

.....

2 SIGNIFICANT ACCOUNTING POLICIES (continued)

e Impairment of assets (continued)

ii Other assets

The carrying amounts of other assets are reviewed at the end of each reporting date to determine whether there is any indication of impairment.

If any such indication exists, then the asset's recoverable amount is estimated. For the purpose of impairment testing, assets are grouped together into the smallest group of assets that generates cash inflows from continuing use that largely are independent of the cash inflows of other assets and or group of assets (the "cash-generating unit").

The recoverable amount of an asset or cash-generating unit is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

An impairment loss is recognised if the carrying amount of an asset or its cash-generating unit exceeds its recoverable amount.

Impairment losses are recognised in the statement of income and expenditure. Impairment losses recognised in respect of cash-generating units are allocated first to reduce the carrying amount of any goodwill allocated to the units and then to reduce the carrying amount of the other assets in the unit (groups of units) on a pro rata basis.

Impairment losses recognised in prior periods are assessed at the end of each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in estimates used to determine the recoverable amount since the last impairment loss was recognised. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised. Reversals of impairment losses are credited to the statement of income and expenditure in the year in which the reversals are recognised.

f Employee benefits

Short term employee benefits

Short-term employee benefit obligations in respect of salaries, annual bonuses, paid annual leave and sick leave are measured on an undiscounted basis and are expensed as the related service is provided.

A provision is recognised for the amount expected to be paid under short-term cash bonus if the Commission has a present legal or constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.

The Commission's contributions to statutory pension funds are charged to the statement of income and expenditure in the year to which they relate. Once the contributions have been paid, the Commission has no further payment obligations.

Notes to The Financial Statements

2 SIGNIFICANT ACCOUNTING POLICIES (continued)

g Fees and other income

i Operating licence fees

Operating licence fees are recognised on the following basis:-

- a a minimum RM50,000 or a maximum license fees of 0.50% of Gross Annual Turnover of the licensee is recognised on an accrual basis upon the anniversary of the license and annually thereafter.
- b the difference between the minimum and the maximum refers to maximum rebates of 0.35% given to licensees only upon meeting the criteria set and approved by the Commission.

ii Spectrum fees

Spectrum fees consist of apparatus and spectrum assignment fees. Renewal notifications are sent to the assignment holders before the expiry of the assignment. Upon receiving the notification, the assignment holders are required to make a fresh application for new assignment. Spectrum fees are recognised on an accrual basis over the license periods granted.

iii Interest income

Interest income is recognised in the statement of income and expenditure as it accrues, taking into account the effective yield on the asset.

h Income tax expense

Income tax expense is in respect of tax on interest income received during the financial year. All other income is exempted from taxation as the Commission is tax exempt under Section 127(3) of the Income Tax, 1967.

Income tax expense comprises of current tax. Income tax expense is recognised in the statement of income and expenditure.

Current tax is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted by the end of the reporting period, and any adjustment to tax payable in respect of previous years.

	2011	2010
	RM'000	RM'000
Property, plant and equipment		
Authorised but not contracted for	127,280	127,651
Contracted but not provided for	5,330	5,733
	132.610	133.384

.....

12 FINANCIAL INSTRUMENTS

12.1 Categories of Financial Instruments

The table below provides an analysis of financial instruments categorised as follows:

- a Loans and receivables (L&R); and
- b Other liabilities (OL)

	Carrying amount 2011 RM'000	L&R/ OL 2011 RM'000	Carrying amount 2010 RM'000	L&R/ OL 2010 RM'000
Financial assets				
Fees and other receivables	40,904	40,904	27,281	27,281
Cash and cash equivalents	2,056,532	2,056,532	1,783,780	1,783,780
	2,097,436	2,097,436	1,811,061	1,811,061
Financial liabilities				
Other payables and accrued expenses	89,342	89,342	52,015	52,015

12.2 Financial risk management

The Commission has exposure to the following risks from its use of financial instruments:

- Credit risk
- · Liquidity risk
- Interest rate risk

12.3 Credit risk

Credit risk is the risk of a financial loss to the Commission if a licensee or counterparty to a financial instrument fails to meet its contractual obligations. The Commission's exposure to credit risk arises principally from its fees and other receivables, bank balances and deposits placed with licensed banks.

Fees and other receivables

Risk management objectives, policies and processes for managing the risk

Management has a credit policy in place and monitors the exposure to credit risk on an ongoing basis.

Exposure to credit risk, credit quality and collateral

As at the end of the reporting period, the maximum exposure to credit risk arising from fees and other receivables is represented by the carrying amounts in the statement of financial position as disclosed in Note 4.

Notes to The Financial Statements

12 FINANCIAL INSTRUMENTS (continued)

12.3 Credit risk (continued)

Management has taken reasonable steps to ensure that receivables that are neither past due nor impaired are stated at their realisable values. A significant portion of these receivables are major licensees that have been transacting with the Commission. The Commission uses ageing analysis to monitor the credit quality of the fees receivables. Any receivables having significant balances past due more than 360 days, which are deemed to have higher credit risk, are monitored individually.

Impairment losses

The ageing of fees receivables as at the end of the reporting period was:

	Individual		
	Gross	impairment	Net
	RM'000	RM'000	RM'000
2011			
Not past due	1,305	_	1,305
Past due 1 - 90 days	253	_	253
Past due 91 - 360 days	1,277	_	1,277
Past due more than 360 days	6,950	(6,902)	48
	9,785	(6,902)	2,883
2010			
Not past due	1,742	(250)*	1,492
Past due 1 - 90 days	212	_	212
Past due 91 - 360 days	1,328	(300)	1,028
Past due more than 360 days	6,109	(6,109)	
	9,391	(6,659)	2,732

^{*} Allowance for impairment losses of fee receivables had been provided for the amount not past due as it was related to the impairment losses incurred by the same licensee in the past years.

The movements in the allowance for impairment losses of fees receivables during the financial year were:

At 31 December	6,902	6,659
Impairment loss reversed	(250)	(870)
Impairment loss recognised	493	950
At 1 January	6,659	6,579
	2011 RM'000	2010 RM'000

The allowance account in respect of fees receivables is used to record impairment losses. Unless the Commission is satisfied that recovery of the amount is possible, the amount considered irrecoverable is written off against the receivable directly.

......

12 FINANCIAL INSTRUMENTS (continued)

12.3 Credit risk (continued)

Deposits placed with licensed banks

Risk management objectives, policies and processes for managing the risk

Deposits are allowed to be placed only with licensed financial institutions.

Exposure to credit risk, credit quality and collateral

As at the end of the reporting period, the Commission has only placed deposits with domestic licensed banks. The maximum exposure to credit risk arising from deposits placed with licensed banks is represented by the carrying amounts in the statement of financial position as shown in Note 5.

12.4 Liquidity risk

Liquidity risk is the risk that the Commission will not be able to meet its financial obligations as they fall due. The Commission's exposure to liquidity risk arises principally from its various payables.

The Commission maintains a level of cash and cash equivalents and bank facilities deemed adequate by the management to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when they fall due.

Maturity analysis

The table below summarises the maturity profile of the Commission's financial liabilities as at the end of the reporting period based on undiscounted contractual payments:

Carrying	Contractual	Under
amount	cash flows	1 year
RM'000	RM'000	RM'000
89,342	89,342	89,342
52,015	52,015	52,015
	amount RM'000 89,342	amount cash flows RM'000 RM'000 89,342 89,342

Notes to The Financial Statements

12 FINANCIAL INSTRUMENTS (continued)

12.5 Interest rate risk

The Commission is exposed to interest rate risk on its fixed deposits placements. The Commission does not transact in any interest rate swaps.

Effective interest rates and repricing analysis

In respect of interest-earning financial assets, the following table indicates their average effective interest rates at the reporting date and the periods in which they mature.

		2011			2010	
	Effective			Effective		
	interest	Within	1-5	interest	Within	1-5
	rate	1 year	years	rate	1 year	years
	%	RM'000	RM'000	%	RM'000	RM'000
Fixed rate instrument						
Deposits	3.01	2,040,081	_	2.88	1,676,149	_

Fair value sensitivity analysis for fixed rate instruments

The Commission does not account for any fixed rate financial assets and liabilities at fair value through profit or loss. Therefore, a change in interest rates at the end of the reporting period would not affect the statement of income and expenditure.

12.6 Fair value of financial instruments

The carrying amounts of cash and cash equivalents, fees and other receivables and other payables and accruals approximate fair values due to the relatively short term nature of these financial instruments.

13 RELATED PARTIES

Identity of related parties

For the purposes of these financial statements, parties are considered to be related to the Commission if the Commission has the ability, directly or indirectly, to control the party or exercise significant influence over the party in making financial and operating decisions, or vice versa, or where the Commission and the party are subject to common control or common significant influence. Related parties may be individuals or other entities.

Key management personnel are defined as those persons having authority and responsibility for planning, directing and controlling the activities of the Commission either directly or indirectly. The key management personnel include all the Members of the Commission, and certain members of senior management of the Commission.

The Commission has a related party relationship with its Members and key management personnel.

Transactions with key management personnel

There are no transactions with key management personnel other than the key management personnel compensation as disclosed in Note 10.

Other related party transactions

There are no other related party transactions during the financial year.

Statement by the Members of the Malaysian Communications and Multimedia Commission

We, Dato' Mohamed Sharil bin Mohamed Tarmizi and Datuk Mohamad Salim bin Fateh Din, being two of the Members of the Malaysian Communications and Multimedia Commission, do hereby state that in the opinion of the Members of the Commission, the financial statements set out on pages 1 to 25 are drawn up in accordance with Financial Reporting Standards in Malaysia so as to give a true and fair view of the financial position of the Commission as of 31 December 2011 and of its income and expenditure and cash flows for the year then ended.

On behalf of Members of the Malaysian Communications and Multimedia Commission:

Dato' Mohamed Sharil bin Mohamed Tarmizi

Datuk Mohamad Salim bin Fateh Din

Selangor,

Date: 30 August 2012

......

Statutory declaration

I, **Tengku Zaib Raja Ahmad**, the officer primarily responsible for the financial management of Malaysian Communications and Multimedia Commission, do solemnly and sincerely declare that the financial statements set out on pages 1 to 25 are, to the best of my knowledge and belief, correct and I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act, 1960.

Subscribed and solemnly declared by the abovenamed in Selangor on 30 August 2012.

Tengku Zaib Raja Ahmad

Before me:

DAMANSARA UTAMA, 47400 PETALING JAYA, ELANGOR DARUL EHSAN.

Independent auditors' report to the members of Malaysian Communications and Multimedia Commission

We have audited the financial statements of Malaysian Communications and Multimedia Commission ("Commission"), which comprise the statement of financial position as at 31 December 2011, and the statements of income and expenditure, total recognised gains and losses and cash flows of the Commission for the year then ended, and a summary of significant accounting policies and other explanatory notes, as set out on pages 1 to 25.

Management of the Commission's Responsibility for the Financial Statements

The Management of the Commission is responsible for the preparation of financial statements that give a true and fair view in accordance with Financial Reporting Standards in Malaysia, and for such internal control as the Management of the Commission determine are necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with approved standards on auditing in Malaysia. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on our judgment, including the assessment of risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the Commission's preparation of financial statements that give a true and fair view in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Commission's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the Management of the Commission, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements have been properly drawn up in accordance with Financial Reporting Standards in Malaysia so as to give a true and fair view of the financial position of the Commission as of 31 December 2011 and of its income and expenditure and cash flows for the year then ended.

.....

Other Matters

This report is made solely to the members of the Commission, as a body, in accordance with Section 47(2) of the Malaysian Communications and Multimedia Commission Act 1998 and for no other purpose. We do not assume responsibility to any other person for the content of this report.

Explanatory notes:

- a. Population projections as of end of period, based on census 2000.
- b. Base year is 2000. c. Base year is 2010.

2 PENETRATION RATES AT A GLANCE

YEAR	BRC	ADBAND	CELLULAR PHONE	DEL	
	PER 100 INHABITANTS	PER 100 HOUSEHOLDS	PER 100 HOUSEHOLDS	PER 100 INHABITANTS	
Note	a	b	С	d	
2010 2011	16.6 19.4	55.6 62.3	119.2 127.7	42.5 37.3	

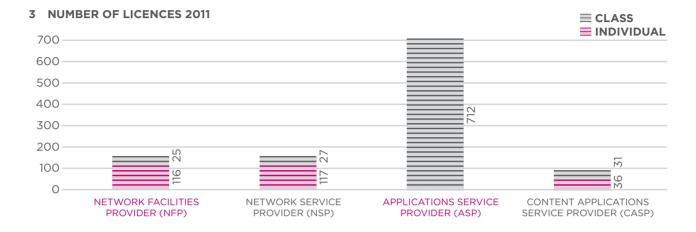

Explanatory notes:

- a The broadband penetration rate per 100 inhabitants is calculated by dividing the sum of household and non-household subscriptions by the number of inhabitants and multiplying by 100. Public WiFi subscriptions are not taken
- b The broadband penetration rate per 100 households is calculated by dividing the estimated number of private households with broadband access by the number of private households and multiplying by 100. Non-private household subscriptions and public WiFi subscriptions are not taken into account.
- $\ensuremath{\text{c}}$ The cellular telephone penetration rate refers to the total subscriptions divided by the total population and multiplied by 100. A penetration rate over 100% can occur because of multiple subscriptions.

d $\,$ The DEL penetration rate per 100 households is calculated by dividing the number of private household subscriptions by the number of private households and multiplying by 100.

The CPI reported against a guarter, refers to the average index for the period spanning 1st January to the end of that guarter.

Explanatory notes:

COMMUNITY BROADBAND CENTRES (CBC) provide collective community Internet access to underserved areas identified under the Universal Service Provision (USP) programme. Each CBC is equipped with IT equipment including personal computers connected to the Internet via broadband to allow rural communities to enjoy the benefits of the Internet as enjoyed by those living in urban areas. It is hoped that the CBC will contribute towards achieving success in national initiatives to bridge the digital divide between urban and rural communities.

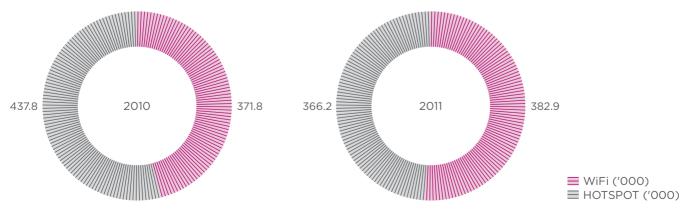

Community Broadband Libraries (CBL). The provision of broadband Internet access to libraries is a project implemented under the USP. The purpose of the implementation is to provide Internet access in underserved areas throughout the country. Initially, the focus of the project is to assist libraries in providing facilities to the marginalised community of digital development in rural areas through

access to communications and training. This project also aims to expand the functions of library staff from only focusing on the physical books and resources in a library's possession to encompass electronic and Internet-based resources and thus empowering them to be an agent of change in improving the socio-economic condition of society through new ways of learning facilitated by the Internet.

Mini Community Broadband Centres (Mini CBC) is a project under USP programme to close the digital divide. Mini CBCs are co-located with Information Department offices all over the country and cover communities living near the mini CBC. Each mini CBC is equipped with 5 personal computers and broadband access

Kampung Tanpa Wayar is a project under USP programme. Its objective is to provide wireless broadband access by installing WiFi antennas in strategic places.

• • • • • • • • • • • • • • • • •			

Explanatory notes:

- 1 Networked Readiness Index 2009-2010
- 2 Networked Readiness Index 2010-2011

THE CONNECTIVITY SCORECARD looks at quality and quantity of ICT usage and infrastructure and relates it to a country's social and economic prosperity. 25 'Resource and Efficiency Driven' and 25 'Innovation Driven' economies are studied (as defined by the World Economic Forum (WEF). Study commissioned by Nokia Siemens Networks. Malaysia is in the "Resource and Efficiency Driven" group of economies. (http://www.connectivityscorecard.org)

DIGITAL ECONOMY RANKING is the readiness of a country's information and communications technology (ICT) infrastructure and the ability of its consumers, businesses and government to use ICT to their benefit. The index has been compiled for 70 economies by Economist Intelligence Unit. Prior to 2010 it was known as the e-readiness index. (http://www.graphics.eiu.com)

NETWORKED READINESS INDEX (NRI) measures the propensity for countries to exploit the opportunities offered by ICT. The index has been compiled for 115 economies by World Economic Forum. (http://weforum.org)

E-GOVERNMENT READINESS INDEX e-government is being deployed not only to provide citizen services but for public sector efficiency purposes, improving transparency and accountability in government functions and allowing for cost savings in government administration. This index is created by the UN Public Administration Network. (http://www2.unpan.org/egovkb/index.aspx)

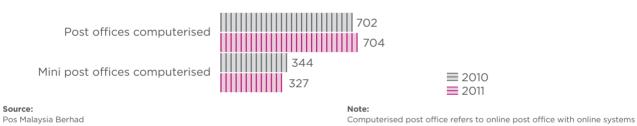

WORLD COMPETITIVENESS SCOREBOARD publishes competitiveness of nations, ranking and analysing how a nation manages its resources and competencies. Published since 1989 it compares the competitiveness of 59 economies on the basis of over 331 criteria. The scoreboard is published by the IMD Business School, Switzerland. (http://www.imd.org)

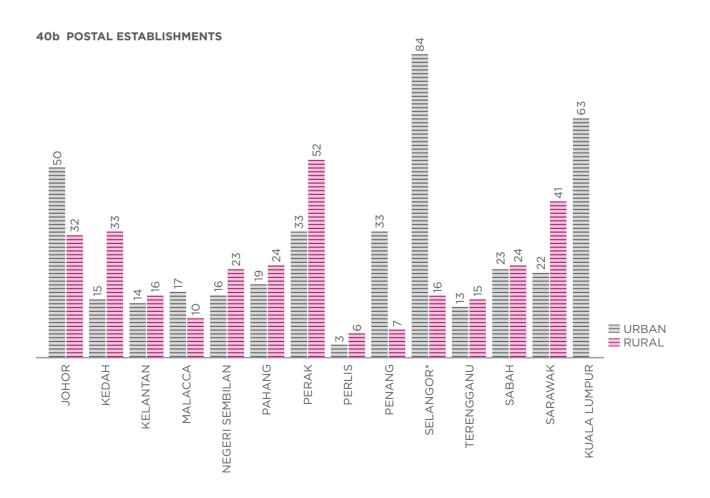

ICT DEVELOPMENT INDEX (IDI) captures the level of advancement of ICTs. It also measures the global digital divide and examines how it has developed in recent years. This index is produced by the International Telecommunication Union. (http://www.itu.int)
