---

Assoc Prof Dr. Ke Guek Nee (School of Life  
Sciences, Heriot-Watt University Malaysia)

Dr. Wong Siew Fan (Department of Information  
Systems, Sunway University, Malaysia).

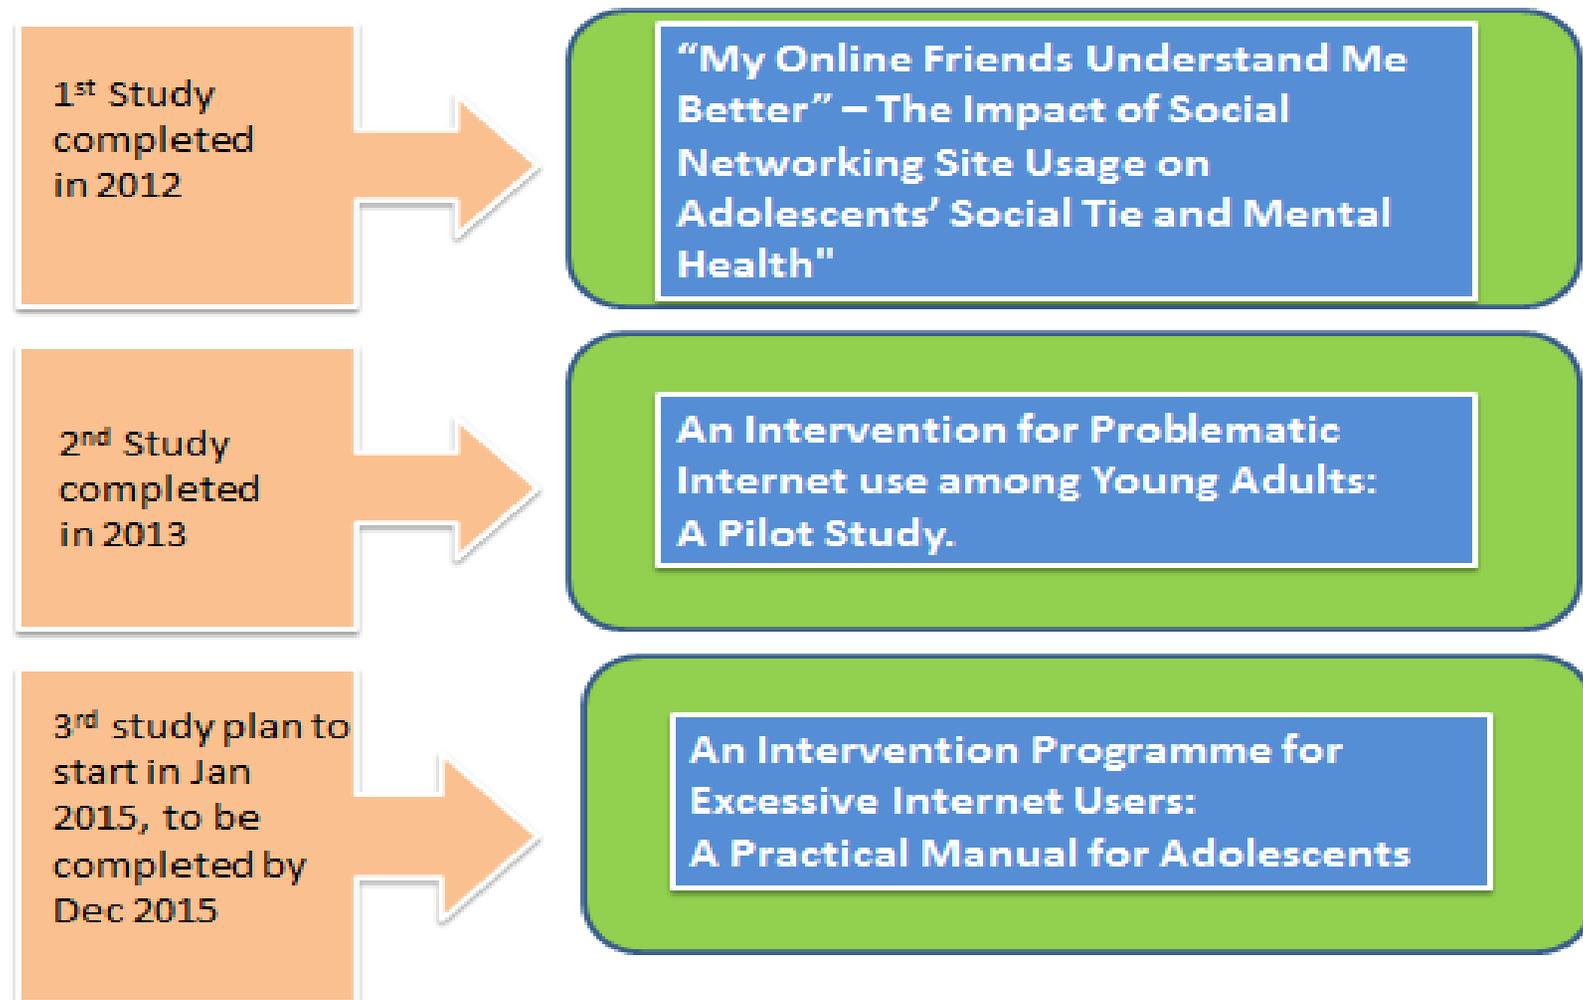

Research Title:

# An Intervention Programme for Excessive Internet Users

---

: A Practical Manual for Adolescents.

Figure 1: RESEARCH PROGRESSION ROUTE

# Study 1 (N=723 )

**SNS addiction level** (normal / mild/ moderate/ severe)

SNS Addiction	%	N
Severe Level	1.7	13
Moderate Level	57.5	416
Total	59.2	429

**Mental Health** (severe and extremely severe level) , approximately

Mental Health	%	N
Anxiety	60	434
Depression	31.7	229
Stress	20	145

# Study 1

Results indicated SNSs addiction correlates significantly and positively with Mental Health

SNS Addiction	Pearson Correlation (r)
Stress	<b>0.510</b>
Anxiety	<b>0.487</b>
Depression	<b>0.513</b>

whereby the more addicted they are to SNS, the higher the probability that their mental health will be affected.

## Study 2

---

- Design a manual-based **Cognitive Behavioural Therapy (CBT)** programme to reduce problematic Internet use among young adults in Malaysia. To reduce the levels of **stress and anxiety** among problematic Internet users, with an emphasis on teaching skills to reduce social anxiety and increase social interactions in real life face-to-face settings.

## Study 2

---

- The results from this study revealed that the mean for post-intervention decreases as compared to pre-intervention, which suggests that participants emotional, psychological and even behavioural have gained improvement after the intervention sessions.

## Related Internet Treatment in Malaysia and Other Countries

## Study III- Objectives

---

- To develop a practical manual from **Cognitive Behavioral Therapy (CBT)** intervention programme to reduce social anxiety and increase social interaction so as to reduce excessive Internet use.
- To **train first batch of school counsellors** and apply the programme in secondary schools.

# Literature

---

- CBT is built on assumption that **thinking processes both influence and are influenced by emotional and behavioural response** (Wills & Sanders, 2013).
- Various authors (Safran & Muran, 2000; Gilbert & Leahy, 2007; Wills, 2008) have emphasised how elements of interpersonal worked through problematic behaviour.

# Methodology

---

## Participants

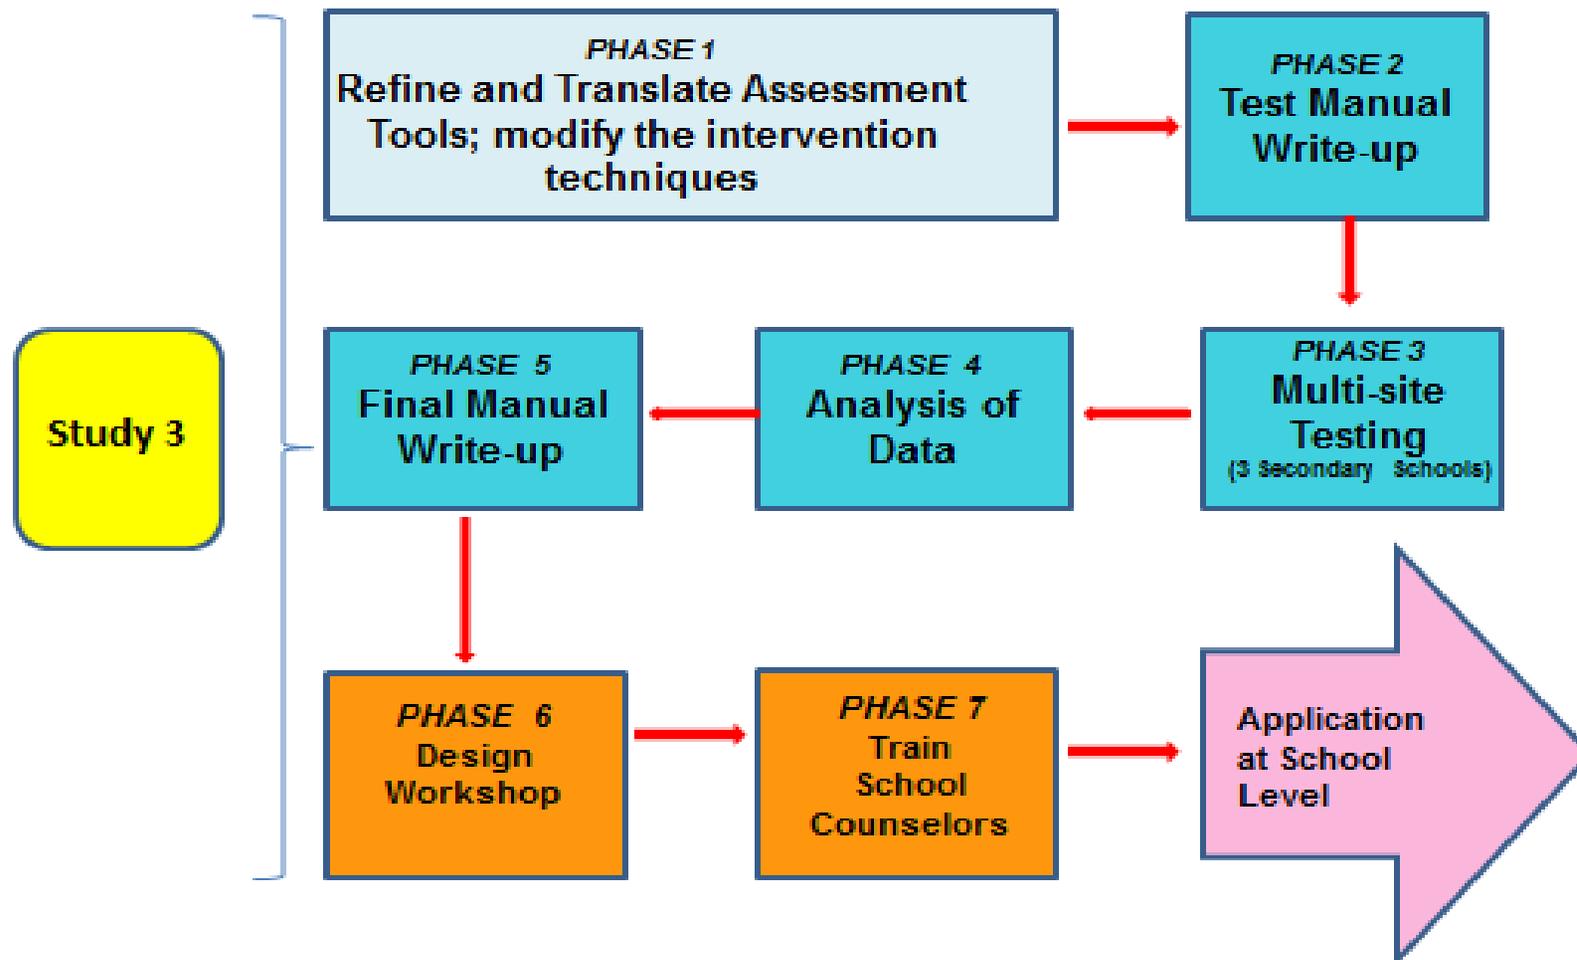

- Secondary school students recruited from government secondary schools. Participants will be from the age range of 13-18 and will be recruited with permission from the Ministry of Education, schools' headmasters and parents.

# Questionnaires

---

- three self-report questionnaires on three occasions; pre-intervention, post-intervention, and follow-up.
  1. Depression, Anxiety, Stress Scales (DASS),
  2. Social Interaction Anxiety Scale
  3. Problematic Internet Use Questionnaire
- The survey instruments that are currently in English format, will be translated into Bahasa Malaysia.

**Figure 2: Flow Chart**  
**An Intervention Programme for Excessive Internet Users: A**  
**Practical Manual for Adolescents**

# Summary

---

1. Implement the program in **secondary schools**.
2. Students learning methods to **reduce social anxiety** and **stress coping skill** related to **social interaction**. Besides that, students will also be taught to **acknowledge their own achievement** and **good qualities** to instil positive thinking.
3. At the end of the programme, students should **exhibit assertive behavior** as well as **confident thoughts** in dealing with face to face interaction.

This programme would be orientated towards **prevention**, rather than treatment of excessive internet use.
