Guide To MCMC Label

1 Introduction

2 What is MCMC Label?

3 Methods to Check MCMC Label

4 Steps to Verify MCMC Label

5 Types of Communication Devices

REGULATION

All communication devices shall be certified pursuant to Regulation 14, Communications and Multimedia (Technical Standards) Regulations 2000. Certified communication devices shall bear MCMC label to indicate that they comply with the standards and legal requirements enforced by MCMC.

IMPACT OF NON-CERTIFIED DEVICES

The use of a communication device without the MCMC label may not be safe as it could come with substandard charger not in compliance with the safety requirements. The use of such device may cause electric shock and in worst case fire.

In addition, a non-certified communication device may not be interoperable with local networks. It may also cause frequency interference which in turn will affect the quality of the network services or even the performance of other communication devices. The device purchased could also be counterfeit or cloned.

PENALTY

Unlawful use, possession or supply of uncertified communication devices is an offence, in which if convicted, a person shall be liable to a fine not exceeding RM100,000 or imprisonment for a term not exceeding six months or both.

CHECK YOUR LABEL (CYL) INITIATIVE

Consumers are encouraged to verify the authenticity of the label by checking the certification details using the 'Check Your Label' mobile application that can be downloaded from Google Play or Apple App Store. Alternatively, IMEIs or serial numbers of the communication devices can be verified on ecomm.sirim.my.

For more information, visit cyl.mcmc.gov.my.

What Is MCMC Label?

MCMC label consists of MCMC logo and manufacturer or supplier's identification number

E-LABELLING

MCMC label in device's firmware

SURFACE LABELLING
