INTRODUCTION

Audit Guidelines for Certification Authority Version 2.0 is a pursuant framework for CA patterned after both Audit Guidelines for Certification Authority Version 1.0 and the Technical Requirements for Audit of Certification Authorities in 1998. Audit Guidelines for Certification Authority Version 2.0 uses Web Trust guidelines (Trust Service Principles and Criteria for Certification Authorities) as platform to outline the core PKI operations requirement and should be usable to all certification authorities that licensed under Digital Signature Act 1997 (DSA 97) and Digital Signature Regulations 1998 (DSR 98) with purview of Malaysian Communication and Multimedia Commission (Commission).

Objective

This Guideline replaces the existing two Guidelines governing the licensed CA: Guidelines for Audit of CA and Technical Requirements for Audit of CA. The licensed CA could use this Guideline as a baseline for control framework to assess the adequacy of the CA systems, policies and procedures. It provides a basis for self-assessment for either development or maintaining strong PKI systems. The qualified auditors could use this Guideline to assess the licensed CA compliance with the DSA 97 and DSR 98.

Scope

Under the DSA 97, the Malaysian Communications and Multimedia Commission (MCMC) has been tasked to monitor and oversee the activities of CA.

This Guideline specifies policy requirements relating to the activities of Certification Authorities (CA) in Malaysia issuing public key certificates. It defines policy requirements on the operation and management of licensed CA issuing public key certificates such that subscribers and relying parties may have confidence in the applicability of the public key certificate in support of cryptographic mechanisms.

The MCMC issues this Guideline to the licensed CA, recognized repositories, recognized date/time stamp services and qualified auditors pursuant to Regulation 85 of the DSR 98 in respect of:

- What constitutes or satisfies the requirements for a trustworthy system; and
- The audit principles and criteria to assess the adequacy and effectiveness of the controls employed by the licensed CA, recognized repositories and recognized date/time stamp services.

Trustworthy CA system

Since trust is the essence of CA operations, the licensed CA must maintain a trustworthy system for the generation and management of keys and certificates and ensure the trustworthiness of the entire CA business operation. The trustworthy system provides specifications of recommended attributes for computer hardware, software, and related procedures that:

- are reasonably secure from intrusion and misuse;
- provide a reasonable level of availability, and reliability, and correct operation;
- are reasonably suited to performing their intended functions; and
- adhere to generally accepted security principles.

The licensed CA must establish procedures and protective measures to minimize risks associated with public key crypto systems. Some of the key compliance requirements under the DSA 97 and DSR 98 are:

- The operations of a licensed CA shall be audited at least once a year (section 20);
- The licensed CA shall use of a trustworthy system in carrying out its operations (section 27);
- The operation stage licence application shall contain a report from a qualified auditor certifying that the prescribed licensing, standards and technical requirements have been satisfied (Regulation 9)

Reference document

The trust principles and criteria in this Guideline are based on the trust principles and criteria for CA version 2.0 developed by AICPA/CICA dated March 2011. They are consistent with Principles and Criteria for Certification Authorities standards developed by a CICA/AICPA Task Force using ISO 21188 “Public Key Policy and Practices Framework” and Version 1.0 of the AICPA/CICA WebTrust Program for Certification Authorities, American National Standards Institute (ANSI), International Organization for Standardization (ISO), and Internet Engineering Task Force (IETF). The Principles and Criteria are also consistent with the practices established by the CA Browser Forum (see www.cabforum.org).

Extended Validation Certificate

Extended Validation Certificates describe certain of the minimum requirements that a CA must meet in order to issue Extended Validation Certificates. Subject Organization information from Valid EV Certificates may be displayed in a special manner by certain relying-party software applications (e.g., browser software) in order to provide users with a trustworthy confirmation of the identity of the entity that controls the Web site they are accessing.

The CA and the qualified auditors are encouraged to adopt the Guidelines for The Issuance and Management of Extended Validation Certificates based on CA Browser Forum.

Qualified Auditors

Regulation 41 requires that certified public accountants or accredited computer security professional intending to act as a compliance auditor in accordance to Section 20 of the DSA 97 to be registered with the MCMC. Thus only the registered qualified auditors can perform the annual compliance audit to the CA.

Auditor's Report

The qualified auditor must submit a written compliance audit report to the MCMC within 14 days from the completion of a compliance audit. The Auditor's report must contain:

- The date of the audit
- A list of information or documents studied or of the personnel interviewed
- The extent of compliance with the DSA 97 and DSR 98
- The results of the audit
- The categorization of the licensed CA as shown in the table below

Level of Compliance	Requirement
Full Compliance	if the licensed CA appears to comply with all the requirements of the DSA 97 and the DSR 98
Substantial compliance	if the licensed CA appears generally to comply with the requirements of the DSA 97 and the DSR 98 but one or more instances of non-compliance or of inability to demonstrate compliance were found in the audited sample, that were likely to be inconsequential
Partial compliance	if the licensed CA appears to comply with some of the requirements of the DSA 97 and the DSR 98 but was found not to have complied with or not to be able to demonstrate compliance with one or more important safeguards
Non-compliance	if the licensed CA: <ul style="list-style-type: none"> (i) complies with few or none of the requirements of the DSA 97 and DSR 98; (ii) fails to keep adequate records to demonstrate compliance with more than a few requirements; or (iii) refused to submit to an audit.

Applicability

The Guidelines are applicable to all CAs licensed under the DSA 97 and DSR 98. The CA is required to comply with the Guidelines. Nevertheless, CA is encouraged to adopt more stringent measures in addition to the requirements as prescribed in the Guidelines. The guideline is consistent and updated in accordance with the trust principles and criteria. Any changes or updated, such changes shall reflected to this guidelines accordingly.

TERMINOLOGY

No.	Terminology	Definition
1	Public Key Infrastructure (PKI)	PKI enables parties to an e-commerce transaction to identify one another by providing authentication with digital certificates, and allows reliable business communications by providing confidentiality through the use of encryption, and authentication data integrity and a reasonable basis for nonrepudiation through the use of digital signatures.
2	CA PKI	The Certificate-based public key infrastructure governed by the CA certificate policies, which enables the worldwide deployment and use of Certificates by CA, its affiliates, their respective customers, Subscribers and Relying Parties.
3	Digital Signature	A mathematical scheme provides authentication, integrity, and nonrepudiation of a digital message or document. A valid digital signature gives a recipient reason to believe that the message was created by a known sender, and that it was not altered in transit.
4	Certification Authority	A certificates issuer and provides a level of assurance that the public key contained in the certificate does indeed belong to the entity named in the certificate.
5	Registration Authority	An entity that approved by a CA and act as agent for the CA to assist Certificate Applicants for registration on identification and authentication, approving, rejecting or revoking Certificates, but does not sign or issue certificates.
6	Certificate Applicant	An individual or organization that requests the issuance of a Certificate by a Certification Authority.
7	Subscriber	A person, organization, or entity that is the subject of and has been issued a Certificate, and is capable of using, and is authorized to use, the private key that corresponds to the public key listed in the Certificate at issue.

No.	Terminology	Definition
8	Relying Party	An individual or organization that acts in reliance on a Certificate or CA Information
9	Repository	An electronic certificate database that is available online. The repository may be maintained by the CA or a third party contracted for that purpose, or by the subscriber, or by any other party. Subscribers may obtain certificates of other subscribers and certificate status information from the repository.
10	Extended Validation Certificate	An additional layer of protection to existing certificates in a strictly defined issuance process created to ensure that the certificate holder is who they claim to be. This is to ensure the ongoing integrity of the process; revocation measures are specified that allow for the quick and effective revocation of improperly issued or misused certificates.
11	Certificate Practice Statement	A document representing a statement of the practices which a Certification Authority employs in issuing and managing certificates as revised from time to time.
12	Certificate Policy	A named set of rules that indicates the applicability of a certificate to a particular community and/or class of application with common security requirements.
13	Hierarchical CA Model	A highest level (or "Root") CA is deployed and subordinate CAs may be set up for various business units, domains or communities of interest. The <i>Root CA</i> validates the subordinate CAs, which in turn issue certificates to lower tier CAs or directly to subscribers.
14	Cross Certified CA Model	A process in which two CAs certify the trustworthiness of the other's certificates. CA cross-certify, creates and digitally signs a certificate containing the public key of other CA (and vice versa). Consequently, users in either CA domain are assured that each CA trusts the other and therefore subscribers in each domain can trust each other.

1. CA BUSINESS PRACTICES DISCLOSURE

The Certification Authority:

- Discloses its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control practices in its Certification Practice Statement;
- Discloses its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control policies in its Certificate Policy (if applicable); and
- Provides services in accordance with its disclosed practices.

1.1 Certification Practice Statement (CPS)

Criteria:

The CA discloses its business practices including but not limited to the topics listed in RFC 3647, RFC 2527, or WebTrust for Certification Authorities v1 CA Business Practices Disclosure Criteria (see Appendix A) in its Certification Practice Statement.

1.2 Certificate Policy (if applicable)

Criteria:

The CA discloses its business practices including but not limited to the topics listed in RFC 3647, RFC 2527, or WebTrust for Certification Authorities v1 (see Appendix A) in its Certificate Policy.

2. CA BUSINESS PRACTICES MANAGEMENT

The Certification Authority maintains effective controls to provide reasonable assurance that:

- The CA’s Certification Practice Statement is consistent with its Certificate Policy (if applicable); and
- The CA provides its services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement.

2.1 Certificate Policy Management (if applicable)

Criteria:
The CA maintains controls to provide reasonable assurance that its Certificate Policy (CP) management process is effective.

Illustrative Controls:	
	Certificate Policy Management
1	The Policy Authority (PA) has the responsibility of defining the business requirements and policies for using digital certificates and specifying them in a Certificate Policy (CP) and supporting agreements.
2	The PA has final authority and responsibility for specifying and approving Certificate Policy(s).
3	Certificate Policy(s) are approved by the Policy Authority in accordance with a defined review process, including responsibilities for maintaining and tracking changes to the Certificate Policy(s).
4	A defined review process exists to assess that the Certificate Policy(s) are capable of support by the controls specified in the CPS.
5	The PA makes available the Certificate Policies supported by the CA to Subscribers and Relying Parties.

2.2 Certification Practice Statement Management

Criteria:
The CA maintains controls to provide reasonable assurance that its Certification Practice Statement (CPS) management processes are effective.

Illustrative Controls:	
	Certification Practice Statement (CPS) Management
1	The PA has final authority and responsibility for approving the CA’s Certification Practice Statement (CPS).

Illustrative Controls:	
2	Responsibilities for maintaining the CPS have been formally assigned.
3	The CA's CPS is modified and approved in accordance with a defined review process.
4	The CA makes available its Certification Practice Statement (CPS) to all appropriate parties.
5	Revisions to the CA's CPS are made available to appropriate parties.
6	The CA updates its CPS to reflect changes in the environment as they occur.

2.3 CP and CPS Consistency (if applicable)

Criteria:
The CA maintains controls to provide reasonable assurance that its Certification Practice Statement addresses the topics included in its Certificate Policy.

Illustrative Controls:	
	CP and CPS Consistency
1	The PA is responsible for ensuring that the CA's control processes, as stated in a Certification Practice Statement (CPS) or equivalent, fully comply with the requirements of the CP.
2	The CA addresses the requirements of the CP when developing its CPS.
3	The CA assesses the impact of proposed CPS changes to ensure that they are consistent with the CP.
4	A defined review process exists to ensure that Certificate Policy(s) are supported by the CA's CPS.

3. CA ENVIRONMENTAL CONTROLS

The Certification Authority maintains effective controls to provide reasonable assurance that:

- Logical and physical access to CA systems and data is restricted to authorized individuals;
- The continuity of key and certificate management operations is maintained; and
- CA systems development, maintenance and operations are properly authorized and performed to maintain CA systems integrity.

a. Security Management

Criteria:

The CA maintains controls to provide reasonable assurance that:

- security is planned, managed and supported within the organization;
- security risks are identified and managed;
- the security of CA facilities, systems and information assets accessed by third parties is maintained; and
- the security of subscriber and relying party information is maintained when the responsibility for CA sub-functions has been outsourced to another organization or entity.

Illustrative Controls:

Information Security Policy	
1	An information security policy document, that includes physical, personnel, procedural and technical controls, is approved by management, published and communicated to all employees.
2	The information security policy includes the following: <ul style="list-style-type: none"> a) a definition of information security, its overall objectives and scope, and the importance of security as an enabling mechanism for information sharing; b) a statement of management intent, supporting the goals and principles of information security; c) an explanation of the security policies, principles, standards and compliance requirements of particular importance to the organization; d) a definition of general and specific responsibilities for information security management, including reporting security incidents; and e) references to documentation, which supports the policy.
3	There is a defined review process for maintaining the information security policy, including responsibilities and review dates.

Illustrative Controls:	
	Information Security Infrastructure
4	Senior management and/or a high-level management information security committee have the responsibility to ensure there is clear direction and management support to manage risks effectively.
5	A management group or security committee exists to co-ordinate the implementation of information security controls and the management of risk.
6	Responsibilities for the protection of individual assets and for carrying out specific security processes are clearly defined.
7	A management authorization process for new information processing facilities exists and is followed.
	Security of Third Party Access
8	Procedures exist and are enforced to control physical and logical access to CA facilities and systems by third parties (e.g., on-site contractors, trading partners and joint ventures).
9	If there is a business need for the CA to allow third party access to CA facilities and systems, a risk assessment is performed to determine security implications and specific control requirements.
10	Arrangements involving third party access to CA facilities and systems are based on a formal contract containing necessary security requirements.
	Outsourcing
11	If the CA outsources the management and control of all or some of its information systems, networks, and/or desktop environments, the security requirements of the CA are addressed in a contract agreed upon between the parties.
12	If the CA chooses to delegate a portion of the CA roles and respective functions to another party, the CA maintains responsibility for the completion of the outsourced functions and the definition and maintenance of a statement of its CPS.

b. Asset Classification and Management

Criteria:
The CA maintains controls to provide reasonable assurance that CA assets and subscriber and relying party information receive an appropriate level of protection based upon identified risks and in accordance with the CA's disclosed business practices.

Illustrative Controls:	
1	Owners are identified for all CA assets and assigned responsibility for the protection of the assets.
2	Inventories of CA assets are maintained.
3	The CA has implemented information classification and associated protective controls for information based on business needs and the business impacts associated with such needs.
4	Information labeling and handling are performed in accordance with the CA's information classification scheme and documented procedures.

c. Personnel Security

Criteria:
The CA maintains controls to provide reasonable assurance that personnel and employment practices enhance and support the trustworthiness of the CA's operations.

Illustrative Controls:	
1	The CA employs personnel (i.e., employees and contractors) who possess the relevant skills, knowledge and experience required for the job function.
2	Security roles and responsibilities, as specified in the organization's security policy, are documented in job descriptions.
3	Trusted Roles, on which the security of the CA's operation is dependent, are clearly identified. Trusted roles include, at a minimum, the following responsibilities: <ul style="list-style-type: none"> a) overall responsibility for administering the implementation of the CA's security practices; b) approval of the generation, revocation and suspension of certificates; c) installation, configuration and maintenance of the CA systems; d) day-to-day operation of CA systems and system backup and recovery; e) viewing and maintenance of CA system archives and audit logs; f) cryptographic key life cycle management functions (e.g., key component custodians); and g) CA systems development.

	Illustrative Controls:
4	The CA's policies and procedures specify the background checks and clearance procedures required for Trusted Roles and non-trusted roles. As a minimum, verification checks on permanent staff are performed at the time of job application and periodically for those individuals undertaking Trusted Roles.
5	An individual's trusted status is approved prior to gaining access to systems/facilities or performing actions requiring trusted status.
6	CA Employees and Trusted Roles sign a confidentiality (non-disclosure) agreement as a condition of employment.
7	Contractors who perform Trusted Roles are subject to at least the same background check and personnel management procedures as employees.
8	Any contract arrangement between Contractors and CAs allows for the provision of temporary contract personnel that explicitly allows the organization to take measures against contract staff who violate the organization's security policies. Protective measures may include: <ul style="list-style-type: none"> a) bonding requirements on contract personnel; b) indemnification for damages due to contract personnel wilful harmful actions; and c) financial penalties.
9	Periodic reviews occur to verify the continued trustworthiness of personnel involved in the activities related to key management and certificate management.
10	A formal disciplinary process exists and is followed for employees who have violated organizational security policies and procedures. The CA's policies and procedures specify the sanctions against personnel for unauthorized actions, unauthorized use of authority, and unauthorized use of systems.
11	Physical and logical access to CA facilities and systems is disabled upon termination of employment.
12	If required based on a risk assessment, duress alarms are provided for users who might be the target of coercion.

Illustrative Controls:	
13	<p>All employees of the organization and, where relevant, third party contractors, receive appropriate training in organizational policies and procedures. The CA's policies and procedures specify the following:</p> <ul style="list-style-type: none"> a) The training requirements and training procedures for each role; and b) Any retraining period and retraining procedures for each role.

d. Physical and Environmental Security

Criteria:
<p>The CA maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • physical access to CA facilities and equipment is limited to authorized individuals, protected through restricted security perimeters, and is operated under multiple person (at least dual custody) control; • CA facilities and equipment are protected from environmental hazards; • loss, damage or compromise of assets and interruption to business activities are prevented; and • compromise of information and information processing facilities is prevented.

Illustrative Controls:	
	CA Facility Physical Security
1	Entry to the building or site containing the CAs certificate manufacturing facility is achieved only through a limited number of controlled access points.
2	All critical CA operations take place within a physically secure facility with at least four layers of security to access sensitive hardware or software. Such systems are physically separated from the organization's other systems so that only authorized employees of the CA can access them.
3	A manned reception area or other means to control physical access is in place to restrict access to the building or site housing CA operations to authorized personnel only.
4	Physical barriers are in place (e.g., solid walls that extend from real floor to real ceiling) to prevent unauthorized entry and environmental contamination to the CAs certificate manufacturing facility.

Illustrative Controls:	
5	Physical barriers are in place (e.g., Faraday cage) to prevent electromagnetic radiation emissions for all Root CA operations (e.g., key generation and certification of CA Certificates) as disclosed in CP and/or CPS.
6	Fire doors on security perimeters around CA operational facilities are alarmed and conform to local fire regulations.
7	Intruder detection systems are installed and regularly tested to cover all external doors of the building housing the CA operational facilities.
8	CA operational facilities are physically locked and alarmed when unoccupied.
9	All personnel are required to wear visible identification. Employees are encouraged to challenge anyone not wearing visible identification.
10	Access to CA operational facilities is controlled and restricted to authorized persons through the use of multi-factor authentication controls.
11	All personnel entering and leaving CA operational facilities are logged (i.e., an audit trail of all access is securely maintained).
12	Entry, exit, and activities within CA facilities are monitored by cameras.
13	Visitors to CA facilities are supervised and their date and time of entry and departure recorded.
14	Third party support services personnel is granted restricted access to secure CA operational facilities only when required and such access is authorized and accompanied.
15	Access rights to CA facilities are regularly reviewed and updated.
Equipment Security	
16	The CA maintains an equipment inventory.
17	Equipment is sited or protected such as to reduce the risks from environmental threats and hazards, and opportunities for unauthorized access.
18	Equipment is protected from power failures and other electrical anomalies.

Illustrative Controls:	
19	Power and telecommunications, within the facility housing the CA operation, cabling carrying data or supporting CA services is protected from interception or damage.
20	Equipment is maintained in accordance with the manufacturer's instructions and/or other documented procedures.
21	All items of equipment containing storage media (fixed and removable disks) are checked to ensure that they do not contain sensitive data prior to their disposal. Storage media containing sensitive data is physically destroyed or securely overwritten prior to disposal or reused.
General Controls	
22	Sensitive or critical business information is locked away when not required and when the CA facility is vacated.
23	Procedures require that personal computers and workstations are logged off or protected by key locks, passwords or other controls when not in use.
24	The movement of materials to/from the CA facility requires prior authorization.

e. Operations Management

Criteria:	
The CA maintains controls to provide reasonable assurance that:	
<ul style="list-style-type: none"> • the correct and secure operation of CA information processing facilities is ensured; • the risk of CA systems failure is minimized; • the integrity of CA systems and information is protected against viruses and malicious software; • damage from security incidents and malfunctions is minimized through the use of incident reporting and response procedures; and • media are securely handled to protect them from damage, theft and unauthorized access. 	

Illustrative Controls:	
Operational Procedures and Responsibilities	
1	CA operating procedures are documented and maintained for each functional area.

Illustrative Controls:	
2	Formal management responsibilities and procedures exist to control all changes to CA equipment, software and operating procedures.
3	Duties and areas of responsibility are segregated in order to reduce opportunities for unauthorized modification or misuse of information or services.
4	Development and testing facilities are separated from operational facilities.
5	Prior to using external facilities management services, risks and related controls are identified, agreed upon with the contractor, and incorporated into the contract.
System Planning and Acceptance	
6	Capacity demands are monitored and projections of future capacity requirements made to ensure that adequate processing power and storage are available.
7	Acceptance criteria for new information systems, upgrades and new versions are established and suitable tests of the system carried out prior to acceptance.
Protection Against Viruses and Malicious Software	
8	Detection and prevention controls to protect against viruses and malicious software are implemented. Employee awareness programs are in place.
Incident Reporting and Response	
9	A formal security incident reporting procedure exists setting out the actions to be taken on receipt of an incident report. This includes a definition and documentation of assigned responsibilities and escalation procedures. Any incidents are reported to PA as a matter of urgency.
10	Users of CA systems are required to note and report observed or suspected security weaknesses in, or threats to, systems or services as they are detected.
11	Procedures exist and are followed for reporting hardware and software malfunctions.
12	Procedures exist and are followed to assess that corrective action is taken for reported incidents.
13	A formal problem management process exists that allows the types, volumes and impacts of incidents and malfunctions to be documented, quantified and monitored.
Media Handling and Security	

Illustrative Controls:	
14	<p>Procedures for the management of removable computer media require the following:</p> <ul style="list-style-type: none"> a) if no longer required, the previous contents of any reusable media that are to be removed from the organization are erased or media is destroyed; b) authorization is required for all media removed from the organization and a record of all such removals to maintain an audit trail is kept; and c) all media are stored in a safe, secure environment, in accordance with manufacturers' specifications.
15	<p>Equipment containing storage media (i.e., fixed hard disks) is checked to determine whether they contain any sensitive data prior to disposal or reuse. Storage devices containing sensitive information are physically destroyed or securely overwritten prior to disposal or reuse.</p>
16	<p>Procedures for the handling and storage of information exist and are followed in order to protect such information from unauthorized disclosure or misuse.</p>
17	<p>System documentation is protected from unauthorized access.</p>

f. System Access Management

Criteria:
<p>The CA maintains controls to provide reasonable assurance that CA system access is limited to authorized individuals. Such controls provide reasonable assurance that:</p> <ul style="list-style-type: none"> • operating system and database access is limited to authorized individuals with predetermined task privileges; • access to network segments housing CA systems is limited to authorized individuals, applications and services; and • CA application use is limited to authorized individuals.

Illustrative Controls:	
	User Access Management

Illustrative Controls:	
1	Business requirements for access control are defined and documented in an access control policy that includes at least the following: a) roles and corresponding access permissions; b) identification and authentication process for each user; c) segregation of duties; and d) number of persons required to perform specific CA operations (i.e., m of n rule where m represents the number of key shareholders required to perform an operation and n represents the total number of key shares).
2	There is a formal user registration and de-registration procedure for access to CA information systems and services.
3	The allocation and use of privileges is restricted and controlled.
4	The allocation of passwords is controlled through a formal management process.
5	Access rights for users with trusted roles are reviewed at regular intervals and updated.
6	Users are required to follow defined policies and procedures in the selection and use of passwords.
7	Users are required to ensure that unattended equipment has appropriate protection.
Network Access Control	
8	CA employed personnel are provided direct access only to the services that they have been specifically authorized to use. The path from the user terminal to computer services is controlled.
9	Remote access to CA systems, made by CA employees or external systems, if permitted, requires authentication.
10	Connections made by CA employees or CA systems to remote computer systems are authenticated.
11	Access to diagnostic ports is securely controlled.
12	Controls (e.g., firewalls) are in place to protect the CA's internal network domain from any unauthorized access from any other domain.
13	Controls are in place to limit the network services (e.g., HTTP, FTP, etc.) available to authorized users in accordance with the CA's access control policies. The security attributes of all network services used by the CA organization are documented by the CA.

Illustrative Controls:	
14	Routing controls are in place to ensure that computer connections and information flows do not breach the CA's access control policy.
15	The CA maintains local network components (e.g., firewalls and routers) in a physically secure environment and audits their configurations periodically for compliance with the CA's configuration requirements.
16	Sensitive data is encrypted when exchanged over public or untrusted networks.
Operating System and Database Access Control	
17	Operating systems and databases are configured in accordance with the CA's system configuration standards and periodically reviewed and updated.
18	Operating system and database patches and updates are applied in a timely manner when deemed necessary based on a risk assessment.
19	Automatic terminal identification is used to authenticate connections to specific locations and to portable equipment.
20	Access to CA systems requires a secure logon process.
21	All CA personnel users have a unique identifier (user ID) for their personal and sole use so that activities can be traced to the responsible individual. Where shared or group accounts are required, other monitoring controls are implemented to maintain individual accountability.
22	Uses of system utility programs are restricted to authorized personnel and tightly controlled.
23	Inactive terminals serving CA systems require re-authentication prior to use.
24	Restrictions on connection times are used to provide additional security for high-risk applications.
25	Sensitive data is protected against disclosure to unauthorized users.
Application Access Control	
26	Access to information and application system functions is restricted in accordance with the CA's access control policy.

Illustrative Controls:	
27	CA personnel are successfully identified and authenticated before using critical applications related to certificate management.
28	Sensitive systems (e.g., Root CA) require a dedicated (isolated) computing environment.

g. Systems Development and Maintenance

Criteria:
The CA maintains controls to provide reasonable assurance that CA systems development and maintenance activities are documented, tested, authorized, and properly implemented to maintain CA system integrity.

Illustrative Controls:	
1	Business requirements for new systems, or enhancements to existing systems specify the control requirements.
2	Software testing and change control procedures exist and are followed for the implementation of software on operational systems including scheduled software releases, modifications and emergency software fixes.
3	Change control procedures exist and are followed for the hardware, network component, and system configuration changes.
4	Test data is protected and controlled.
5	Control is maintained over access to program source libraries.
6	Application systems are reviewed and tested when operating system changes occur.
7	The implementation of changes is strictly controlled by the use of formal change control procedures to minimize the risk of corruption of information systems.
8	Modifications to software packages are discouraged and all changes are strictly controlled.
9	The purchase, use and modification of software are controlled and checked to protect against possible covert channels and Trojan code. This includes the authentication of the source of the software. These controls apply equally to outsourced software development.

h. Business Continuity Management

Criteria:	
<p>The CA maintains controls to provide reasonable assurance of continuity of operations in the event of a disaster. Such controls include, at a minimum:</p> <ul style="list-style-type: none"> • the development and testing of a CA business continuity plan that includes a disaster recovery process for critical components of the CA system; • the storage of required cryptographic materials (i.e., secure cryptographic device and activation materials) at an alternate location; • the storage of backups of systems, data and configuration information at an alternate location; and • the availability of an alternate site, equipment and connectivity to enable recovery. <p>The CA maintains controls to provide reasonable assurance that potential disruptions to Subscribers and Relying Parties are minimized as a result of the cessation or degradation of the CA's services.</p>	

Illustrative Controls:	
1	The CA has a managed process for developing and maintaining its business continuity plans. The CA has a business continuity planning strategy based on an appropriate risk assessment.
2	<p>The CA has a business continuity plan to maintain or restore the CA's operations in a timely manner following interruption to, or failure of, critical CA processes. The CA's business continuity plan addresses the following:</p> <ul style="list-style-type: none"> a) the conditions for activating the plans; b) emergency procedures; c) fallback procedures; d) resumption procedures; e) a maintenance schedule for the plan; f) awareness and education requirements; g) the responsibilities of the individuals; h) recovery time objective (RTO); and i) regular testing of contingency plans.

Illustrative Controls:	
3	<p>The CA's business continuity plans include disaster recovery processes for all critical components of a CA system, including the hardware, software and keys, in the event of a failure of one or more of these components. Specifically:</p> <ul style="list-style-type: none"> a) cryptographic devices used for storage of backup CA private keys are securely stored at an off-site location in order for the CA to recover in the event of a disaster at the primary CA facility; and b) the requisite secret key shares or key components, needed to use and manage the disaster recovery cryptographic devices, are securely stored at an off-site location.
4	Backup copies of essential business information are regularly taken. The security requirements of these copies are consistent with the controls for the information backed up.
5	The CA identifies and arranges for an alternate site where core PKI operations can be restored in the event of a disaster at the CA's primary site. Fallback equipment and backup media are sited at a safe distance to avoid damage from disaster at the main site.
6	The CA's business continuity plans include procedures for securing its facility to the extent possible during the period of time following a disaster and prior to restoring a secure environment either at the original or a remote site.
7	The CA's business continuity plans address the recovery procedures used if computing resources, software, and/or data are corrupted or suspected to be corrupted.
8	Business continuity plans are tested regularly to ensure that they are up to date and effective.
9	Business continuity plans define an acceptable system outage time, recovery time, and the average time between failures as disclosed in the CP and/or CPS.
10	Business continuity plans are maintained by regular reviews and updates to ensure their continuing effectiveness.
11	The CA maintains procedures for the termination, notification of affected entities, and for transferring relevant archived CA records to a custodian as disclosed in the CP and/or CPS.

i. Monitoring and Compliance

Criteria:
<p>The CA maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • it conforms with the relevant legal, regulatory and contractual requirements; • compliance with the CA’s security policies and procedures is ensured; • the effectiveness of the system audit process is maximized and interference to and from the system audit process is minimized; and • unauthorized CA system usage is detected.

Illustrative Controls:	
	Compliance with Legal Requirements
1	Relevant statutory, regulatory and contractual requirements are explicitly defined and documented.
2	The CA has implemented procedures to comply with legal restrictions on the use of material in respect of intellectual property rights, and on the use of proprietary software products.
3	Controls are in place to ensure compliance with national agreements, laws, regulations or other instruments to control the access to or use of cryptographic hardware and software.
4	Procedures exist to ensure that personal information is protected in accordance with relevant legislation.
5	<p>The information security policy addresses the following:</p> <ul style="list-style-type: none"> a) the information that must be kept confidential by CA or RA; b) the information that is not considered confidential; c) the policy on release of information to law enforcement officials; d) information that can be revealed as part of civil discovery; e) the conditions upon which information may be disclosed with the subscriber’s consent; and f) any other circumstances under which confidential information may be disclosed.
6	CA records are protected from loss, unauthorized destruction and falsification.
7	Management authorizes the use of information processing facilities and controls are applied to prevent the misuse of such facilities.
	Review of Security Policy and Technical Compliance

Illustrative Controls:	
8	Managers are responsible for ensuring that security procedures within their area of responsibility are carried out correctly.
9	The CA's operations are subject to regular review to ensure timely compliance with its CPS.
10	CA systems are periodically checked for compliance with security implementation standards.
System Audit Process	
11	Audits of operational systems are planned and agreed such as to minimize the risk of disruptions to business processes.
12	Access to system audit tools is protected to prevent possible misuse or compromise.
Monitoring System Access and Use	
13	Procedures for monitoring the use of CA systems are established which include the timely identification and follow up of unauthorized or suspicious activity. Alerting mechanisms are implemented to detect unauthorized access.

j. Audit Logging

Criteria:	
The CA maintains controls to provide reasonable assurance that:	
<ul style="list-style-type: none"> • significant CA environmental, key management, and certificate management events are accurately and appropriately logged; • the confidentiality and integrity of current and archived audit logs are maintained; • audit logs are completely and confidentially archived in accordance with disclosed business practices; and • audit logs are reviewed periodically by authorized personnel. 	

Illustrative Controls:	
Audit Logs	
1	The CA generates automatic (electronic) and manual audit logs in accordance with the requirements of the CP and/or CPS.

Illustrative Controls:	
2	<p>All journal entries include the following elements:</p> <ul style="list-style-type: none"> a) date and time of the entry; b) serial or sequence number of entry (for automatic journal entries); c) kind of entry; d) source of entry (e.g., terminal, port, location, customer, etc.); and e) identity of the entity making the journal entry.
Events Logged	
3	<p>The CA logs the following CA and subscriber (if applicable) key life cycle management related events:</p> <ul style="list-style-type: none"> a) CA key generation; b) installation of manual cryptographic keys and its outcome (with the identity of the operator); c) CA key backup; d) CA key storage; e) CA key recovery; f) CA key escrow activities (if applicable); g) CA key usage; h) CA key archival; i) withdrawal of keying material from service; j) CA key destruction; k) identity of the entity authorizing a key management operation; l) identity of the entities handling any keying material (such as key components or keys stored in portable devices or media); m) custody of keys and of devices or media holding keys; and n) compromise of a private key.
4	<p>The CA logs the following cryptographic device life cycle management related events:</p> <ul style="list-style-type: none"> a) device receipt and installation; b) placing into or removing a device from storage; c) device activation and usage; d) device de-installation; e) designation of a device for service and repair; and f) device retirement.

Illustrative Controls:	
5	<p>If the CA provides subscriber key management services, the CA logs the following subscriber key life cycle management related events:</p> <ul style="list-style-type: none"> a) key generation; b) key distribution (if applicable); c) key backup (if applicable); d) key escrow (if applicable); e) key storage; f) key recovery (if applicable); g) key archival (if applicable); h) key destruction; i) identity of the entity authorizing a key management operation; and j) key compromise.
6	<p>The CA records (or requires that the RA record) the following certificate application information:</p> <ul style="list-style-type: none"> a) the method of identification applied and information used to meet subscriber requirements; b) record of unique identification data, numbers, or a combination thereof (e.g., applicants drivers license number) of identification documents, if applicable; c) storage location of copies of applications and identification documents; d) identity of entity accepting the application; e) method used to validate identification documents, if any; f) name of receiving CA or submitting RA, if applicable; g) the subscriber's acceptance of the Subscriber Agreement; and h) where required under privacy legislation, the Subscriber's consent to allow the CA to keep records containing personal data, pass this information to specified third parties, and publication of certificates.
7	<p>The CA logs the following certificate life cycle management related events:</p> <ul style="list-style-type: none"> a) receipt of requests for certificate(s) – including initial certificate requests, renewal requests and rekey requests; b) submissions of public keys for certification; c) change of affiliation of an entity; d) generation of certificates; e) distribution of the CA's public key; f) certificate revocation requests; g) certificate revocation; h) certificate suspension requests (if applicable); i) certificate suspension and reactivation; and j) generation and issuance of Certificate Revocation Lists.

Illustrative Controls:	
8	The CA logs the following security-sensitive events: <ul style="list-style-type: none"> a) security-sensitive files or records read or written including the audit log itself; b) actions taken against security-sensitive data; c) security profile changes; d) use of identification and authentication mechanisms, both successful and unsuccessful (including multiple failed authentication attempts); e) system crashes, hardware failures and other anomalies; f) actions taken by individuals in Trusted Roles, computer operators, system administrators, and system security officers; g) change of affiliation of an entity; h) decisions to bypass encryption/authentication processes or procedures; and i) access to the CA system or any component thereof.
9	Audit logs do not record the private keys in any form (e.g., plaintext or enciphered).
10	CA computer system clocks are synchronized for accurate recording as defined in the CP and/or CPS that specifies the accepted time source.
Audit Log Protection	
11	Current and archived audit logs are maintained in a form that prevents their modification, substitution, or unauthorized destruction.
12	Digital signatures are used to protect the integrity of audit logs where applicable or required to satisfy legal requirements.
13	The private key used for signing audit logs is not used for any other purpose. This applies equally to a symmetric secret key used with a symmetric MAC mechanism.
Audit Log Archival	
14	The CA archives audit log data on a periodic basis as disclosed in the CP and/or CPS.
15	In addition to possible regulatory stipulation, a risk assessment is performed to determine the appropriate length of time for retention of archived audit logs.
16	The CA maintains archived audit logs at a secure off-site location for a predetermined period as determined by risk assessment and legal requirements.
Review of Audit Logs	
17	Current and archived audit logs are only retrieved by authorized individuals for valid business or security reasons.

Illustrative Controls:	
18	Audit logs are reviewed periodically according to the practices established in the CPS. The review of current and archived audit logs include a validation of the audit logs' integrity, and the timely identification and follow up of unauthorized or suspicious activity.

4. CA KEY LIFE CYCLE MANAGEMENT CONTROLS

The Certification Authority maintains effective controls to provide reasonable assurance that the integrity of keys and certificates it manages is established and protected throughout their life cycles.

4.1 CA Key Generation

Criteria:

The CA maintains controls to provide reasonable assurance that CA key pairs are generated in accordance with the CA's disclosed business practices and defined procedures specified within detailed key generation ceremony scripts.

The CA's disclosed business practices include but are not limited to:

- a) generation of CA keys are undertaken in a physically secured environment (see §3.4);
- b) generation of CA keys are performed by personnel in trusted roles (see §3.3) under the principles of multiple person control and split knowledge;
- c) generation of CA keys occur within cryptographic modules meeting the applicable technical and business requirements as disclosed in the CA's CPS;
- d) generation of CA keys are witnessed by an independent party and/or videotaped; and
- e) CA key generation activities are logged.

The CA key generation script includes the following:

- a) definition of roles and participant responsibilities;
- b) approval for conduct of the key generation ceremony;
- c) cryptographic hardware and activation materials required for the ceremony;
- d) specific steps performed during the key generation ceremony;
- e) physical security requirements for the ceremony location;
- f) procedures for secure storage of cryptographic hardware and activation materials following the key generation ceremony;
- g) sign-off from participants and witnesses indicating whether key generation ceremony was performed in accordance with the detailed key generation ceremony script; and
- h) notation of any deviations from the key generation ceremony script.

Illustrative Controls:	
Generation of CA Keys Including Root CA Keys – General Requirements	
1	Generation of CA keys occur within a cryptographic module meeting the applicable requirements of ISO 15782-1/FIPS 140-2 (or equivalent)/ANSI X9.66 and the business requirements in accordance with the CPS. Such cryptographic devices perform key generation using a random number generator (RNG) or pseudo random number generator (PRNG).
2	The CA generates its own key pair in the same cryptographic device in which it will be used or the key pair is injected directly from the device where it was generated into the device where it will be used.
3	CA key generation generates keys which: <ol style="list-style-type: none"> a) use a key generation algorithm as disclosed within the CA’s CP and/or CPS; b) have a key length that is appropriate for the algorithm and for the validity period of the CA certificate as disclosed in the CA’s CP and/or CPS. The public key length to be certified by a CA is less than or equal to that of the CA’s private signing key; and c) take into account requirements on parent and subordinate CA key sizes and have a key size in accordance with the CA’s CP and/or CPS.
4	CA key generation ceremonies are independently witnessed by internal or external auditors.
Generation of CA Keys Including Root CA Keys – Script Requirements	
5	The CA follows a CA key generation script for key generation ceremonies that includes the following: <ol style="list-style-type: none"> a) definition and assignment of participant roles and responsibilities; b) management approval for conduct of the key generation ceremony; c) specific cryptographic hardware, software and other materials including identifying information, e.g., serial numbers; d) specific steps performed during the key generation ceremony; <ul style="list-style-type: none"> • Hardware preparation; • Operating system installation; • CA application installation and configuration; • CA key generation; • CA key backup; • CA certificate signing; • CA system shutdown; and • Preparation of materials for storage. e) physical security requirements for the ceremony location (e.g., barriers, access controls and logging controls); f) procedures for secure storage of cryptographic hardware and activation materials following the key generation ceremony (e.g., detailing the allocation of materials between storage locations);

	<p>g) sign-off on the script or in a log from participants and witnesses indicating whether key generation ceremony was performed in accordance with the detailed key generation ceremony script; and</p> <p>h) notation of any deviations from the key generation ceremony script (e.g., documentation of steps taken to address any technical issues).</p>
6	The integrity of the hardware/software used for key generation and the interfaces to the hardware/software is tested before production usage.

4.2 CA Key Storage, Backup and Recovery

Criteria:	
The CA maintains controls to provide reasonable assurance that CA private keys remain confidential and maintain their integrity. The CA's private keys are backed up, stored and recovered by authorized personnel in trusted roles, using multiple person control in a physically secured environment.	

Illustrative Controls:	
1	The CA's private (signing and confidentiality) keys are stored and used within a secure cryptographic device meeting the appropriate ISO 15408 protection profile or FIPS 140-2 level requirement based on a risk assessment and the business requirements of the CA and in accordance with the CA's CPS and applicable Certificate Policy(s).
2	If the CA's private keys are not exported from a secure cryptographic module, then the CA private key is generated, stored and used within the same cryptographic module.
3	<p>If the CA's private keys are exported from a secure cryptographic module to secure storage for purposes of offline processing or backup and recovery, then they are exported within a secure key management scheme that may include any of the following:</p> <p>a) as cipher-text using a key which is appropriately secured;</p> <p>b) as encrypted key fragments using multiple control and split knowledge/ownership; or</p> <p>c) in another secure cryptographic module such as a key transportation device using multiple control.</p>
4	Backup copies of the CA's private keys are subject to the same or greater level of security controls as keys currently in use. The recovery of the CA's keys is carried out in as secure a manner as the backup process, using multi-person control.

4.3 CA Public Key Distribution

Criteria:
The CA maintains controls to provide reasonable assurance that the integrity and authenticity of the CA public keys and any associated parameters are maintained during initial and subsequent distribution.

Illustrative Controls:	
1	<p>For the Root CA distribution process (e.g., using a self-signed certificate), an out-of-band notification mechanism is employed. Where a self-signed certificate is used for any CA, the CA provides a mechanism to verify the authenticity of the self-signed certificate (e.g., publication of the certificate's fingerprint).</p> <p>For subsequent and/or Subordinate CA public keys these are validated by using a chaining method or similar process to link back to the trusted Root Certificate.</p>
2	<p>The initial distribution mechanism for the CA's public key is controlled and initially distributed within a Certificate using one of the following methods:</p> <ul style="list-style-type: none"> a) machine readable media (e.g., smart card, CD ROM) from an authenticated source; b) embedding in an entity's cryptographic module; or c) other secure means that ensure authenticity and integrity.
3	<p>The CA's public key is changed (rekeyed) periodically according to the requirements of the CPS with advance notice provided to avoid disruption of the CA services.</p>
4	<p>The subsequent distribution mechanism for the CA's public key is controlled in accordance with the CA's disclosed business practices.</p>
5	<p>If an entity already has an authenticated copy of the CA's public key, a new CA public key is distributed using one of the following methods:</p> <ul style="list-style-type: none"> a) direct electronic transmission from the CA; b) placing into a remote cache or directory; c) loading into a cryptographic module; or d) any of the methods used for initial distribution.
6	<p>The CA provides a mechanism for validating the authenticity and integrity of the CA's public keys.</p>

4.4 CA Key Usage

Criteria:
The CA maintains controls to provide reasonable assurance that CA keys are used only for their intended functions in their predetermined locations.

Illustrative Controls:	
1	The activation of the CA private signing key is performed using multi-party control (i.e., m of n) with a minimum value of m (e.g., m greater than 2 for Root CAs).
2	If necessary based on a risk assessment, the activation of the CA private key is performed using multi-factor authentication (e.g., smart card and password, biometric and password, etc.).
3	CA signing key(s) used for generating certificates and/or issuing revocation status information, are not used for any other purpose.
4	The CA ceases to use a key pair at the end of the key pair's defined operational lifetime or when the compromise of the private key is known or suspected.
5	An annual review is required by the PA on key lengths to determine the appropriate key usage period with recommendations acted upon.

4.5 CA Key Archival and Destruction

Criteria:
The CA maintains controls to provide reasonable assurance that: <ul style="list-style-type: none"> • archived CA keys remain confidential and secured and are never put back into production; and • CA keys are completely destroyed at the end of the key pair life cycle in accordance with the CA's disclosed business practices.

Illustrative Controls:	
	CA Key Archival
1	Archived CA keys are subject to the same or greater level of security controls as keys currently in use.

Illustrative Controls:	
2	All archived CA keys are destroyed at the end of the archive period using dual control in a physically secure site.
3	Archived keys are only accessed where historical evidence requires validation. Control processes are required to ensure the integrity of the CA systems and the key sets.
4	Archived keys are recovered for the shortest possible time period technically permissible to meet business requirements.
5	Archived keys are periodically verified to ensure that they are properly destroyed at the end of the archive period.
CA Key Destruction	
6	The CA's private keys are not destroyed until the business purpose or application has ceased to have value or legal obligations have expired as disclosed within the CA's CPS.
7	Authorization to destroy a CA private key and how the CA's private key is destroyed (e.g., token surrender, token destruction, or key overwrite) are limited in accordance with the CA's CPS.
8	All copies and fragments of the CA's private key are destroyed at the end of the key pair life cycle in a manner such that the private key cannot be retrieved.
9	If a secure cryptographic device is accessible and known to be permanently removed from service, all CA private keys stored within the device that have ever been or potentially could be used for any cryptographic purpose are destroyed.
10	If a CA cryptographic device is being permanently removed from service, then any key contained within the device that has been used for any cryptographic purpose is erased from the device.
11	If a CA cryptographic device case is intended to provide tamper-evident characteristics and the device is being permanently removed from service, then the case is destroyed.

4.6 CA Key Compromise

Criteria:	
The CA maintains controls to provide reasonable assurance that continuity of operations is maintained in the event of the compromise of the CA's private keys and any certificates, signed with the compromised keys, are revoked and reissued.	

Illustrative Controls:	
1	The CA's business continuity plans address the compromise or suspected compromise of a CA's private keys as a disaster.
2	Disaster recovery procedures include the revocation and reissuance of all certificates that were signed with that CA's private key, in the event of the compromise or suspected compromise of a CA's private signing key.
3	The recovery procedures used if the CA's private key is compromised include the following actions: <ul style="list-style-type: none"> a) how secure key usage in the environment is re-established; b) how the CA's old public key is revoked; c) how affected parties are notified (e.g., impacted CAs, Repositories, Subscribers and CVSPs); d) how the CA's new public key is provided to the end entities and Relying Parties together with the mechanism for their authentication; and e) how the subscriber's public keys are re-certified.
4	In the event that the CA has to replace its Root CA private key, procedures are in place for the secure and authenticated revocation of the following: <ul style="list-style-type: none"> a) the old CA root public key; b) the set of all certificates (including any self-signed) issued by a Root CA or any CA based on the compromised private key; and c) any subordinate CA public keys and corresponding certificates that require recertification.
5	The CA's business continuity plan for key compromise addresses who is notified and what actions are taken with system software and hardware, symmetric and asymmetric keys, previously generated signatures and encrypted data.

4.7 CA Cryptographic Hardware Life Cycle Management

Criteria:	
<p>The CA maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • devices used for private key storage and recovery and the interfaces to these devices are tested before usage for integrity; • access to CA cryptographic hardware is limited to authorized personnel in trusted roles, using multiple person control; and • CA cryptographic hardware is functioning correctly. 	

Illustrative Controls:	
1	CA cryptographic hardware is sent from the manufacturer via registered mail (or equivalent) using tamper evident packaging. Upon the receipt of CA cryptographic hardware from the manufacturer, authorized CA personnel inspects the tamper evident packaging to determine whether the seal is intact.
2	Upon the receipt of CA cryptographic hardware from the manufacturer, acceptance testing and verification of firmware settings is performed. Upon the receipt of CA cryptographic hardware that has been serviced or repaired, acceptance testing and verification of firmware settings is performed.
3	<p>To prevent tampering, CA cryptographic hardware is stored and used in a secure site, with access limited to authorized personnel, having the following characteristics:</p> <ul style="list-style-type: none"> a) inventory control processes and procedures to manage the origination, arrival, condition, departure and destination of each device; b) access control processes and procedures to limit physical access to authorized personnel; c) recording of all successful or failed access attempts to the CA facility and device storage mechanism (e.g., a safe) in audit logs; d) incident handling processes and procedures to handle abnormal events, security breaches, and investigation and reports; and e) monitoring processes and procedures to verify the ongoing effectiveness of the controls.
4	When not attached to the CA system, the CA cryptographic hardware is stored in a tamper resistant container that is stored securely under multiple controls (i.e., a safe).
5	<p>The handling of CA cryptographic hardware, including the following tasks, is performed in the presence of no less than two trusted employees:</p> <ul style="list-style-type: none"> a) installation of CA cryptographic hardware; b) removal of CA cryptographic hardware from production; c) servicing or repair of CA cryptographic hardware (including installation of new hardware, firmware, or software); and d) disassembly and permanent removal from use.

Illustrative Controls:	
6	Devices used for private key storage and recovery and the interfaces to these devices are tested before usage for integrity.
7	Correct processing of CA cryptographic hardware is verified on a periodic basis.
8	Diagnostic support is provided during troubleshooting of CA cryptographic hardware in the presence of no less than two trusted employees.

4.8 CA Key Escrow (if applicable)

Criteria:
The CA maintains controls to provide reasonable assurance that escrowed CA private signing keys remain confidential.

Illustrative Controls:	
1	If a third party provides CA private key escrow services, a contract exists that outlines the liabilities and remedies between the parties.
2	If CA private signing keys are held in escrow, escrowed copies of the CA private signing keys have the same or greater level of security controls as keys currently in use.

5. SUBSCRIBER KEY LIFE CYCLE MANAGEMENT CONTROLS

The Certification Authority maintains effective controls to provide reasonable assurance that the integrity of subscriber keys and certificates it manages is established and protected throughout their life cycles.

5.1 CA-Provided Subscriber Key Generation Services (if supported)

Criteria:
<p>If the CA provides Subscriber key management services, the CA maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • subscriber keys generated by the CA (or RA or card bureau) are generated within a secure cryptographic device based on a risk assessment and the business requirements of the CA in accordance with the CA’s disclosed business practices; and • subscriber keys generated by the CA (or RA or card bureau) are securely distributed to the subscriber by the CA (or RA or card bureau) in accordance with the CA’s disclosed business practices.

Illustrative Controls:	
	CA (or RA or Card Bureau) Provided Subscriber Key Generation
1	Subscriber key generation is performed within a secure cryptographic device meeting the applicable ISO 15782-1/FIPS 140-2/ANSI x9.66 requirements based on a risk assessment and the business requirements of the CA and in accordance with the applicable CP. Such cryptographic devices perform subscriber key generation using a random number generator (RNG) or pseudo random number generator (PRNG) as specified in the ANSI X9 or ISO standard ISO/IEC 18032.
2	Subscriber key generation performed by the CA (or RA or card bureau) uses a key generation algorithm as specified in the CP.
3	Subscriber key generation performed by the CA (or RA) uses a prime number generator as specified in an ANSI X9 or ISO standard.
4	Subscriber key generation performed by the CA (or RA or card bureau) results in key sizes in accordance with the CP.
5	Subscriber key generation performed by the CA (or RA) is performed by authorized personnel in accordance with the CA’s CPS.
6	When subscriber key generation is performed by the CA (or RA or card bureau), the CA (or RA or card bureau) securely (confidentially) delivers the subscriber key pair(s) generated by the CA (or RA or card bureau) to the subscriber in accordance with the CP.

5.2 CA-Provided Subscriber Key Storage and Recovery Services (if supported)

Criteria:
<p>If the CA provides subscriber (confidentiality) key storage, recovery or escrow services, the CA maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • subscriber private keys stored by the CA remain confidential and maintain their integrity; • subscriber private keys archived and escrowed by the CA remain confidential; and • subscriber private keys stored by the CA are completely destroyed at the end of the key pair life cycle.

Illustrative Controls:	
	CA-Provided Subscriber Key Storage, Backup and Recovery
1	Subscriber private keys stored by the CA (or RA) are stored in encrypted form using a cryptographic algorithm and key length based on a risk assessment and requirements of the CP.
2	If the CA generates key pair(s) on behalf of a Subscriber, the CA (or RA) ensures that the subscriber's private keys are not disclosed to any entity other than the owner (i.e., the subscriber) of the keys.
3	If the CA (or RA) generates public/private signing key pair(s), it does not maintain a copy of any private signing key, once the subscriber confirms receipt of that key.
4	If the CA (or RA) provides subscriber (confidentiality) key storage, backup and recovery, subscriber private (confidentiality) key backup and recovery services are only performed by authorized personnel.
5	If the CA (or RA) provides subscriber key storage, backup and recovery, controls exist to ensure that the integrity of the subscriber's private (confidentiality) key is maintained throughout its life cycle.
	CA-Provided Subscriber Key Archival
6	Subscriber private (confidentiality) keys archived by the CA are stored in encrypted form using a cryptographic algorithm and key length based on a risk assessment and the requirements of the CP.
7	If the CA provides subscriber (confidentiality) key archival, all archived Subscriber keys are destroyed at the end of the archive period.
	CA-Provided Subscriber Key Destruction
8	If the CA provides subscriber (confidentiality) key storage, authorization to destroy a subscriber's private key and the means to destroy the subscriber's private (confidentiality) key (e.g., key overwrite) is limited in accordance with the CP.
9	If the CA provides subscriber (confidentiality) key storage, all copies and fragments of the subscriber's private key are destroyed at the end of the key pair life cycle.
	CA-Provided Subscriber Key Escrow

Illustrative Controls:	
10	Subscriber private (confidentiality) keys escrowed by the CA are stored in encrypted form using a cryptographic algorithm and key length based on a risk assessment and the requirements of the CP.

5.3 Integrated Circuit Card (ICC) Life Cycle Management (if supported)

Criteria:	
<p>If the CA (or RA) distributes subscriber key pairs and certificates using Integrated Circuit Cards (ICCs), the CA (or RA) maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • ICC procurement, preparation and personalization are securely controlled by the CA (or RA or card bureau); • ICC Application Data File (ADF) preparation is securely controlled by the CA (or RA); • ICC usage is enabled by the CA (or RA or card bureau) prior to ICC issuance; • ICC deactivation and reactivation are securely controlled by the CA (or RA); • ICCs are securely stored and distributed by the CA (or RA or card bureau); • ICCs are securely replaced by the CA (or RA or card bureau); and • ICCs returned to the CA (or RA or card bureau) are securely terminated. 	

Illustrative Controls:	
ICC Procurement	
1	If the CA or RA engages a card bureau then a formal contract exists between the relevant parties. While card issuing functions may be delegated to third parties the CA retains responsibility and liability for the ICCs.
2	ICCs are logically protected during transport between the card manufacturer and the card issuer through the use of a secret transport key or pass phrase.
3	ICCs issued to subscribers meet the appropriate ISO 15408 protection profile, ISO card standard (e.g., ISO 7810, 7811 parts 1-5, 7813, 7816, 10202) or FIPS 140-2 level requirement based on a risk assessment and the requirements of the CP.
4	The card bureau verifies the physical integrity of ICCs upon receipt from the card manufacturer.
5	ICCs are securely stored and under inventory control while under the control of the card Issuer.
Card Preparation and Personalization	
6	The CA (or RA), as the card issuer, controls ICC personalization (the loading of Common Data File (CDF) data and its related cryptographic keys).

Illustrative Controls:	
7	Common data that identify the ICC, the card issuer, and the cardholder are stored by the card issuer in the ICC Common Data File (CDF). Common Data File (CDF) activation is performed by the CA (or RA), as the card issuer, using a securely controlled process.
8	ICC preparation processes and procedures, including the following, exist and are followed: <ul style="list-style-type: none"> a) loading of the card operating system; b) creation of logical data structures (card file system and card security domains); c) loading of applications; and d) logically protecting the ICC to prevent unauthorized modification of the card operating system, card file system, card security domains, and applications.
9	ICC personalization processes and procedures, including the following, exist and are followed: <ul style="list-style-type: none"> a) the loading of identifying information onto the card; b) generation of subscriber key pair(s) in accordance with the CP; c) loading subscriber private key(s) onto the ICC (if generated outside the card) in encrypted form; d) loading subscriber Certificate(s) onto the ICC; e) loading the CA and other Certificates for the contractual environment onto the ICC; and f) logically protecting the ICC from unauthorized access.
10	The card bureau or CA (or RA) logs ICC preparation and personalization in an audit log.
11	An ICC is not issued unless the card has been prepared and personalized by the card bureau, the CA or the RA.
12	An ICC is unusable unless in an activated or reactivated state.
ICC Storage and Distribution	
13	ICCs are securely stored prior to distribution.
14	Processes and procedures exist and are followed for the distribution, tracking and accounting for the safe receipt of Subscriber ICCs to subscribers.
15	ICC initial activation data (initialising PIN) is securely communicated to the subscriber or where applicable the Subscriber using an out-of-band method. The subscriber is encouraged to change the initial activation data upon receipt to make the card active.
16	ICC distribution is logged by the card bureau or CA (or RA) in an audit log.

Illustrative Controls:	
	Subscriber ICC Usage
17	The subscriber is provided with a mechanism that protects the access to the card data including the private keys stored on the ICC during use by the Subscriber (i.e., PIN access control mechanism Cardholder Verification Method).
18	The subscriber private keys on the ICC are not exported to an application to undertake cryptographic (i.e., signing) functions.
19	The subscriber is required to use a mutual authentication mechanism for cryptographic application and card functions to ensure system integrity.
20	The subscriber is required to use an application that displays the message or the message's digest to the subscriber prior to signing message (or transaction) data. The subscriber ICC application produces audit logs of all uses of the ICC. This also includes all attempts in the private key owner verification process.
21	The ICC is used by the subscriber or where applicable the Subscriber in accordance within the terms of the CP.
	ICC Deactivation and Reactivation
22	Application Data File (ADF) deactivation can be performed only by the CA, as the application supplier.
23	Common Data File (CDF) deactivation can be performed only by the CA, as the card issuer.
24	CDF reactivation is conducted under the control of the CA, as the card issuer.
25	ADF reactivation is conducted under the control of the CA, as the application supplier.
26	ADF deactivation, CDF deactivation, CDF reactivation, and ADF reactivation are logged.
	ICC Replacement
27	Processes and procedures exist and are followed for replacement of a subscriber's lost or damaged ICC.
28	In the event of card loss or damage, subscriber certificates are renewed or rekeyed in accordance with the CP (see clauses 6.2 and 6.3).
29	ICC replacement is logged by the card bureau or CA (or RA) in an audit log.
	ICC Termination
30	All ICCs returned to the ICC or CA (or RA) are deactivated or securely destroyed to prevent unauthorised use.
31	Common Data File (CDF) termination is controlled by the CA, as the card issuer.
32	ICC termination is logged by the card bureau or CA (or RA) in an audit log.

5.4 Requirements for Subscriber Key Management

Criteria:	
	<p>The CA maintains controls to provide reasonable assurance that:</p> <ul style="list-style-type: none"> • Requirements for protection of subscriber keys are communicated to subscribers; and • Any subscriber key management tools provided by the CA support the requirements of the CA’s business practices disclosure.

Illustrative Controls:	
	Subscriber Key Generation
1	The CP specifies the appropriate ISO 15782-1/FIPS 140-2 level requirement for cryptographic modules used for subscriber key generation.
2	The CP specifies the key generation algorithm(s) that is used for subscriber key generation.
3	The CP specifies the acceptable key sizes for subscriber key generation.
	Subscriber Key Storage, Backup and Recovery
4	The CA or RA provides or makes available the mechanisms to allow the Subscriber to access (i.e., private key owner verification method), manage and control the usage of their private keys.
5	The CP specifies the private key protection requirements for stored subscriber private keys.
6	The CP states the circumstances and authority of when the subscriber’s private key will be restored and the control processes.
7	The CP specifies the private key protection requirements for backup copies of subscriber private keys stored by the subscriber.
	Subscriber Key Usage
8	Subscriber Agreements describe the required processes to be followed by the Subscriber of any use of the cryptographic mechanism (e.g., HSM or ICC and software application).
9	The CP specifies the acceptable uses for subscriber key pairs.
10	The CP specifies the requirements for subscriber key usage.
	Subscriber Key Archival
11	The CP specifies the private key protection requirements for archived subscriber private keys.
12	The CP specifies the requirements for destruction of archived subscriber keys at the end of the archive period.
	Subscriber Key Destruction

Illustrative Controls:	
13	The CP specifies the means through which subscriber key destruction is performed.
14	The CP or CPS specifies the requirements for destruction of all copies and fragments of the subscriber's private key at the end of the key pair life cycle.
Subscriber Cryptographic Hardware Life Cycle Management	
15	If required, the CP specifies the requirements for use and handling of cryptographic hardware and subscriber authentication processes (and subsequent actions) where the cryptographic hardware is in other physical locations (i.e., an HSM attached to a mainframe or remote server).
Subscriber Key Compromise	
16	The CP specifies the requirements for notification of the CA or RA in the event of subscriber key compromise.

6. CERTIFICATE LIFE CYCLE MANAGEMENT CONTROLS

The Certification Authority maintains effective controls to provide reasonable assurance that Subscriber information was properly authenticated (for the registration activities performed by ABC-CA).

6.1 Subscriber Registration

Criteria:
<p>The CA maintains controls to provide reasonable assurance that:</p> <p>For authenticated certificates</p> <ul style="list-style-type: none"> • Subscribers are accurately identified in accordance with the CA’s disclosed business practices; and • Subscriber’s certificate requests are accurate, authorized and complete. <p>For domain validated certificates</p> <ul style="list-style-type: none"> • Subscribers’ domain names are accurately validated in accordance with the CA’s disclosed business practices; and • Subscriber’s certificate requests are accurate and complete.

Illustrative Controls:	
	Identification and authentication
1	<p>For authenticated certificates, the CA verifies or requires that the RA verify the credentials presented by a subscriber as evidence of identity or authority to perform a specific role in accordance with the requirements of the CP.</p> <p>a) For individual end entity certificates, the CA or RA verifies the identity of the person whose name is to be included in the subscriber distinguished name field of the certificate. An unauthenticated individual name is not included in the subscriber distinguished name.</p> <p>b) For organizational certificates (including role based, server, network resource, code signing, etc.), the CA or RA verifies the legal existence of the organization’s name and the authority of the requesting party to be included in the organization attribute in the subscriber distinguished name field of the certificate. An unauthenticated organization name is not included in a certificate.</p> <p>c) For organizational certificates containing a domain name of an organisation, the CA or RA verifies the organization’s ownership, control, or right to use the domain name and the authority of the requesting party included in the common name attribute of the subscriber distinguished name field of the certificate. An unauthenticated domain name is not included in a certificate.</p>
2	<p>For domain validated certificates, the CA validates or requires that the RA validate (as determined by the CP) the organization’s ownership, control, or right to use the domain name.</p>

Illustrative Controls:	
3	The CA or RA verifies the accuracy of the information included in the requesting entity's certificate request in accordance with the CP.
4	The CA or RA checks the Certificate Request for errors or omissions in accordance with the CP.
5	For end entity certificates, the CA uses the RA's public key contained in the requesting entity's Certificate Request to verify signature on the Certificate Request submission.
6	The CA verifies the uniqueness of the subscriber's distinguished name within the boundaries or community defined by the CP.
7	Encryption and access controls are used to protect the confidentiality and integrity of registration data in transit and in storage.
8	At the point of registration (before certificate issuance) the RA or CA informs the Subscriber of the terms and conditions regarding use of the certificate.
9	Before certificate issuance, the CA informs the Subscriber of the terms and conditions regarding use of the certificate.
	Certificate Request
10	The CA requires that an entity requesting a certificate must prepare and submit the appropriate certificate request data (Registration Request) to an RA (or the CA) as specified in the CP.
11	The CA requires that the requesting entity submit its public key in a self-signed message to the CA for certification. The CA requires that the requesting entity digitally sign the Registration Request using the private key that relates to the public key contained in the Registration Request in order to: <ul style="list-style-type: none"> a) allow the detection of errors in the certificate application process; and b) prove possession of the companion private key for the public key being registered.
12	The certificate request is treated as acceptance of the terms of conditions by the requesting entity to use that certificate as described in the Subscriber Agreement.
13	The CA validates the identity of the RA authorised to issue registration requests under a specific CP.
14	The CA requires that RAs submit the requesting entity's certificate request data to the CA in a message (Certificate Request) signed by the RA. The CA verifies the RA's signature on the Certificate Request.
15	The CA requires that the RA secure that part of the certificate application process for which it (the RA) assumes responsibility in accordance with the CA's CPS.
16	The CA requires that RAs record their actions in an audit log.
17	The CA verifies the authenticity of the submission by the RA in accordance with the CA's CPS.

6.2 Certificate Renewal (if supported)

Criteria:
The CA maintains controls to provide reasonable assurance that certificate renewal requests are accurate, authorized and complete.

Illustrative Controls:	
	Certificate Renewal Request
1	The Certificate Renewal Request includes at least the subscriber’s Distinguished Name, the Serial Number of the certificate (or other information that identifies the certificate), and the requested validity period. (The CA will only renew certificates that were issued by itself.)
2	The CA requires that the requesting entity digitally sign the Certificate Renewal Request using the private key that relates to the public key contained in the requesting entity’s existing public key certificate.
3	The CA issues a new certificate using the subscriber’s previously certified public key, only if its cryptographic security is still sufficient for the new certificate’s intended lifetime and no indications exist that the subscriber’s private key has been compromised.
4	For renewal of authenticated certificates, the CA or the RA process the certificate renewal data to verify the identity of the requesting entity and to identify the certificate to be renewed.
5	For domain validated certificates, the CA or the RA process the certificate renewal data to re-validate the domain in accordance with the requirements of the CP.
6	The CA or the RA validate the signature on the Certificate Renewal Request.
7	The CA verifies the existence and validity of the certificate to be renewed. The CA does not renew certificates that have been revoked, expired or suspended.
8	The CA or the RA verifies that the request, including the extension of the validity period, meets the requirements defined in the CP.

Illustrative Controls:	
9	The CA requires that RAs submit the Certificate Renewal Data to the CA in a message (Certificate Renewal Request) signed by the RA.
10	The CA requires that the RA secures that part of the certificate renewal process for which it (the RA) assumes responsibility in accordance with the CP.
11	The CA requires that RAs record their actions in an audit log.
12	The CA verifies the authenticity of the submission by the RA.
13	The CA verifies the RA's signature on the Certificate Renewal Request.
14	The CA checks the Certificate Renewal Request for errors or omissions. This function may be delegated explicitly to the RA.
15	The CA or RA notifies Subscribers prior to the expiration of their certificate of the need for renewal in accordance with the CP.
16	The CA issues a signed notification indicating the certificate renewal has been successful.
17	The CA makes the new certificate available to the end entity in accordance with the CP.

6.3 Certificate Rekey

Criteria:	
The CA maintains controls to provide reasonable assurance that certificate rekey requests, including requests following certificate revocation or expiration, are accurate, authorized and complete.	

Illustrative Controls:	
1	A Certificate Rekey Request includes at least the subscriber's distinguished name, the serial number of the certificate, and the requested validity period to allow the CA or the RA to identify the certificate to rekey.
2	The CA requires that the requesting entity digitally sign, using the existing private key, the Certificate Rekey Request containing the new public key.

Illustrative Controls:	
3	For authenticated certificates, the CA or the RA processes the Certificate Rekey Request to verify the identity of the requesting entity and identify the certificate to be rekeyed.
4	For domain validated certificates, the CA or the RA process the Certificate Rekey Request to re-validate the domain in accordance with the requirements of the CP.
5	The CA or the RA validates the signature on the Certificate Rekey Request.
6	The CA or the RA verifies the existence and validity of the certificate to be rekeyed.
7	The CA or the RA verifies that the Certificate Rekey Request meets the requirements defined in the relevant CP.
8	If an external RA is used, the CA requires that RAs submit the entity's certificate rekey request to the CA in a message signed by the RA.
9	If an external RA is used, the CA requires that the RA secure that part of the certificate rekey process for which it (the RA) assumes responsibility.
10	If an external RA is used, the CA requires that external RAs record their actions in an audit log.
11	If an external RA is used, the CA verifies the RA's signature on the Certificate Rekey Request.
12	The CA or the RA checks the Certificate Rekey Request for errors or omissions.
13	The CA or RA notifies Subscribers prior to the expiration of their certificate of the need for rekey.
14	Prior to the generation and issuance of rekeyed certificates, the CA or RA verifies the following: <ul style="list-style-type: none"> a) the signature on the certificate rekey data submission; b) the existence and validity supporting the rekey request; and c) that the request meets the requirements defined in the CP.

Criteria:
The CA maintains controls to provide reasonable assurance that certificate rekey requests following certificate revocation or expiration are accurate, authorized and complete.

Illustrative Controls:	
1	Following the revocation or expiration of a subscriber's existing certificate, the subscriber is required to follow the CA's subscriber registration procedures to obtain a new certificate.

6.4 Certificate Issuance

Criteria:	
The CA maintains controls to provide reasonable assurance that certificates are generated and issued in accordance with the CA's disclosed business practices.	

Illustrative Controls:	
1	The CA generates certificates using Certificate Request Data and manufactures the certificate as defined by the appropriate Certificate Profile in accordance with ISO 9594/X.509 and ISO 15782-1 formatting rules as disclosed within the CP.
2	Validity periods are set in the CP and are formatted in accordance with ISO 9594/X.509 and ISO 15782-1 as disclosed within the CP.
3	Extension fields are formatted in accordance with ISO 9594/X.509 and ISO 15782-1 as disclosed within the CP.
4	The CA signs the end entity's public key and other relevant information with the CA's private signing key.
5	The CA publishes the certificate after the certificate has been accepted by the requesting entity as disclosed in the CA's business practices.
6	When an RA is used, the CA notifies the RA when a certificate is issued to a subscriber for whom the RA submitted a certificate request.
7	Certificates are issued based on approved subscriber registration, certificate renewal or certificate rekey requests in accordance with the CP.
8	The CA issues a signed notification to the RA when a certificate is issued to a subscriber for whom the RA submitted a certificate request.
9	The CA issues an out-of-band notification to the Subscriber when a certificate is issued. Where this notification includes initial activation data, then control processes ensure safe delivery to the Subscriber.

Illustrative Controls:	
10	Whether certificates expire, are revoked or are suspended, copies of certificates are retained for the appropriate period of time specified in the CP.

6.5 Certificate Distribution

Criteria:
The CA maintains controls to provide reasonable assurance that, upon issuance, complete and accurate certificates are available to subscribers and relying parties in accordance with the CA's disclosed business practices.

Illustrative Controls:	
1	The CA makes the certificates issued by the CA available to relevant parties using an established mechanism (e.g., a repository such as a directory) in accordance with the CP.
2	Only authorized CA personnel administer the CA's repository or alternative distribution mechanism.
3	The performance of the CA's repository or alternative distribution mechanism is monitored and managed.
4	The integrity of the repository or alternative distribution mechanism is maintained and administered.
5	Where required under privacy legislation, certificates are made available for retrieval only in those cases for which the subscriber's consent is obtained.

6.6 Certificate Revocation

Criteria:
The CA maintains controls to provide reasonable assurance that certificates are revoked, based on authorized and validated certificate revocation requests within the time frame in accordance with the CA's disclosed business practices.

Illustrative Controls:	
1	The CA provides a means of rapid communication to facilitate the secure and authenticated revocation of the following: a) one or more certificates of one or more subscribers; b) the set of all certificates issued by a CA based on a single public/private key pair used by a CA to generate certificates; and c) all certificates issued by a CA, regardless of the public/private key pair used.
2	The CA verifies or requires that the RA verify the identity and authority of the entity requesting revocation of a certificate in accordance with the CP.
3	If an external RA accepts revocation requests, the CA requires that the RA submit signed certificate revocation requests to the CA in an authenticated manner in accordance with the CP.
4	If an external RA accepts and forwards revocation requests to the CA, the CA provides a signed acknowledgement of the revocation request and confirmation of actions to the requesting RA.
5	The CA updates the Certificate Revocation List (CRL) and other certificate status mechanisms in the timeframes specified within the CP and in accordance with the format defined in ISO 9594/X.509 and ISO 15782-1.
6	The CA records all certificate revocation requests and their outcome in an audit log.
7	The CA or RA may provide an authenticated acknowledgement (signature or similar) of the revocation to the entity who perpetrated the revocation request.
8	Where certificate renewal is supported, when a certificate is revoked, all valid instances of the certificate are also revoked and are not reinstated.
9	The Subscriber of a revoked or suspended certificate is informed of the change of status of its certificate.

6.7 Certificate Suspension (if supported)

Criteria:
The CA maintains controls to provide reasonable assurance that certificates are suspended based on authorized and validated certificate suspension requests within the time frame in accordance with the CA's disclosed business practices.

Illustrative Controls:	
1	The CA provides a means of rapid communication to facilitate the secure and authenticated suspension of the following: a) one or more certificates of one or more subscribers; b) the set of all certificates issued by a CA based on a single public/private key pair used by a CA to generate certificates; and c) all certificates issued by a CA, regardless of the public/private key pair used.
2	The CA verifies or requires that the external RA verify the identity and authority of the entity requesting suspension and reactivation of a certificate in accordance with the CP.
3	If an external RA accepts suspension requests, the RA submits signed certificate suspension requests to the CA in an authenticated manner in accordance with the CP.
4	The CA or RA notifies the Subscriber in the event of a certificate suspension.
5	Certificate suspension requests are processed and validated in accordance with the requirements of the CP.
6	The CA updates the Certificate Revocation List (CRL) and other certificate status mechanisms upon certificate suspension. Changes in certificate status are completed in a time frame determined by the CP.
7	Certificates are suspended only for the allowable length of time in accordance with the CP.
8	Once a certificate suspension (hold) has been issued, the suspension is handled in one of the following three ways: a) an entry for the suspended certificate remains on the CRL with no further action; b) the CRL entry for the suspended certificate is replaced by a revocation entry for the same certificate; or c) the suspended certificate is explicitly released and the entry removed from the CRL.
9	A certificate suspension (hold) entry remains on the CRL until the expiration of the underlying certificate or the expiration of the suspension, whichever is first.
10	The CA updates the Certificate Revocation List (CRL) and other certificate status mechanisms upon the lifting of a certificate suspension in accordance with the CA's CP.
11	The CA verifies or requires that the external RA verify the identity and authority of the entity requesting that the suspension of a certificate be lifted.
12	Certificate suspensions and the lifting of certificate suspensions are recorded in an audit log.

6.8 Certificate Validation

Criteria:
The CA maintains controls to provide reasonable assurance that timely, complete and accurate certificate status information (including Certificate Revocation Lists and other certificate status mechanisms) is made available to relevant entities (Subscribers and Relying Parties or their agents) in accordance with the CA's disclosed business practices.

Illustrative Controls:	
1	The CA makes certificate status information available to relevant entities (Relying Parties or their agents) using an established mechanism in accordance with the CP. This is achieved using: <ul style="list-style-type: none"> a) Request Response Method – A request signed by the Relying Party to the Certificate Status Provider's responder. In turn, the Certificate Status Provider's responder responds with the certificate status duly signed. (OCSP is an example protocol using this method.) and/or b) Delivery Method – A CRL signed by the CA and published within the policy's time frame.
	The following control procedures are applicable where CRLs are used:
2	The CA digitally signs each CRL that it issues so that entities can validate the integrity of the CRL and the date and time of issuance.
3	The CA issues CRLs at regular intervals, as specified in the CP, even if no changes have occurred since the last issuance.
4	At a minimum, a CRL entry identifying a revoked certificate remains on the CRL until the end of the certificate's validity period.
5	If certificate suspension is supported, a certificate suspension (hold) entry, with its original action date and expiration date remain on the CRL until the normal expiration of the certificate or until the suspension is lifted.
6	CRLs are archived in accordance with the requirements of the CP including the method of retrieval.
7	CAs include a monotonically increasing sequence number for each CRL issued by that CA.
8	The CRL contains entries for all revoked unexpired certificates issued by the CA.
9	Old CRLs are retained for the appropriate period of time specified in the CA's CP.
10	Whether certificates expire, are revoked or are suspended, copies of certificates are retained for the appropriate period of time as disclosed in the CP.
	The following control procedures are applicable where online certificate status mechanisms (e.g., OCSP) are used:

Illustrative Controls:	
11	If an online certificate status collection method (e.g., OCSP) is used, the CA requires that certificate status inquiries (e.g., OCSP requests) contain all required data in accordance with the CP.
12	<p>Upon the receipt of a certificate status request (e.g., an OCSP request) from a Relying Party or its agent, the CA returns a definitive response to the Relying Party or its agent if:</p> <ul style="list-style-type: none"> a) the request message is well formed; b) the Certificate Status Provider responder is configured to provide the requested service; c) the request contains the information (i.e., certificate identity – Serial number, OID, etc.) needed by the Certificate Status Provider responder in accordance with the CP; and d) the Certificate Status Provider’s responder is able to locate the certificate and interpret its status. <p>Where these conditions are met, the CA or Certificate Status Provider produces a signed response message indicating the certificate’s status in accordance with the CP. If any of the above conditions are not met then a status of unknown may be returned.</p>
13	All response messages are digitally signed and include all required data in accordance with the CP.

7. SUBORDINATE CA CERTIFICATE LIFE CYCLE MANAGEMENT CONTROLS

The Certification Authority maintains effective controls to provide reasonable assurance that subordinate CA certificate requests are accurate, authenticated and approved.

7.1 Subordinate CA Certificate Life Cycle Management

Criteria:	
The Parent CA maintains controls to provide reasonable assurance that:	
<ul style="list-style-type: none"> • subordinate CA certificate requests are accurate, authenticated and approved; • subordinate CA certificate replacement (renewal and rekey) requests are accurate, authorized, complete; • new, renewed and rekeyed Subordinate CA certificates are generated and issued in accordance with the CA's disclosed business practices; • upon issuance, complete and accurate Subordinate CA certificates are available to relevant entities (Subscribers and Relying Parties) in accordance with the CA's disclosed business practices; • subordinate CA certificates are revoked based on authorized and validated certificate revocation requests; and • timely, complete and accurate certificate status information (including CRLs and other certificate status mechanisms) is made available to any entity in accordance with the CA's disclosed business practices. 	

Illustrative Controls:	
Subordinate CA (Sub-CA) Registration	
1	The Parent CP specifies the requirements for submission of Sub-CA certification requests.
2	The Parent CA authenticates the Sub-CA certificate request in accordance with the Parent's CP.
3	The Parent CA performs an assessment of the Sub-CA certificate applicant's compliance with the requirements of the Parent CA's CP before approving a Sub-CA certificate request, or alternatively the Sub-CA presents its CPS for assessment.
Sub-CA Renewal	
4	Where Sub-CA certificate renewal is permitted, the Parent CA's CP specifies the requirements for submission of Sub-CA renewal requests.
5	Where Sub-CA certificate renewal is permitted, the Parent CA authenticates the Sub-CA certificate renewal request in accordance with the CA's CP.
Sub-CA Rekey	
6	The Parent CA's CP specifies the requirements for submission of Sub-CA rekey requests.
7	The Parent CA authenticates the Sub-CA certificate rekey request in accordance with the CP.

Illustrative Controls:	
	Sub-CA Certificate Issuance
8	The Parent CA generates certificates: <ul style="list-style-type: none"> a) using the appropriate certificate profile in accordance with the CP and ISO 9594/X.509 and ISO 15782-1 formatting rules; b) with the validity periods formatted in accordance with ISO 9594/X.509, ISO 15782-1 and the CP; and c) where extensions are used, with extension fields formatted in accordance with ISO 9594/X.509, ISO 15782-1 and the CP.
9	The Parent CA signs the Sub-CA certificate with the Parent CA's private signing key.
	Sub-CA Certificate Distribution
10	The Parent CA makes Sub-CA certificates available to relevant entities (e.g., Relying Parties) using an established mechanism (e.g., a repository such as a directory) in accordance with the Parent CA's CP.
	Sub-CA Certificate Revocation
11	The Parent CA verifies the identity and authority of the entity requesting revocation of a Sub-CA certificate in accordance with the Parent CA's CP.
12	The Parent CA updates the Certificate Revocation List (CRL) and other Sub-CA certificate status mechanisms upon certificate revocation in accordance with the Parent CA's CP.
	Sub-CA Certificate Status Information Processing
13	The Parent CA makes Sub-CA certificate status information available to Relying Parties using an established mechanism (e.g., CRL, OCSP, etc.) in accordance with the Parent CA's CP.

APPENDIX A

The CA maintains controls to provide reasonable assurance that its Certificate Policy and Certification Practice Statement address the topics from RFC 3647, RFC 2527, or WTCA v1 listed below.

§1 RFC 3647

Section No.	RFC 3647 Section
1	Introduction
1.1	Overview
1.2	Document Name and Identification
1.3	PKI Participants
1.3.1	Certification Authorities
1.3.2	Registration Authorities
1.3.3	Subscribers
1.3.4	Relying Parties
1.3.5	Other Participants
1.4	Certificate Usage
1.4.1	Appropriate Certificate Uses
1.4.2	Prohibited Certificate Uses
1.5	Policy Administration
1.5.1	Organization Administering the Document
1.5.2	Contact Person
1.5.3	Person Determining CPS Suitability for the Policy
1.5.4	CPS Approval Procedures
1.6	Definitions and Acronyms
2	Publication and Repository Responsibilities
2.1	Repositories
2.2	Publication of Certification Information
2.3	Time or Frequency of Publication
2.4	Access Controls on Repositories
3	Identification and Authentication
3.1	Naming
3.1.1	Type of Names
3.1.2	Need for Names to be Meaningful
3.1.3	Anonymity or Pseudonymity of Subscribers
3.1.4	Rules for Interpreting Various Name Forms
3.1.5	Uniqueness of Names
3.1.6	Recognition, Authentication, and Role of Trademarks
3.2	Initial Identity Validation
3.2.1	Method to Prove Possession of Private Key
3.2.2	Authentication of Organization Identity
3.2.3	Authentication of Individual Identity

Section No.	RFC 3647 Section
3.2.4	Non-Verified Subscriber Information
3.2.5	Validation of Authority
3.2.6	Criteria for Interoperation
3.3	Identification and Authentication for Rekey Requests
3.3.1	Identification and Authentication for Routine Rekey
3.3.2	Identification and Authentication for Rekey After Revocation
3.4	Identification and Authentication for Revocation Request
4	Certificate Life Cycle Operational Requirements
4.1	Certificate Application
4.1.1	Who Can Submit a Certificate Application
4.1.2	Enrollment Process and Responsibilities
4.2	Certificate Application Processing
4.2.1	Performing Identification and Authentication Functions
4.2.2	Approval or Rejection of Certificate Applications
4.2.3	Time to Process Certificate Applications
4.3	Certificate Issuance
4.3.1	CA Actions During Certificate Issuance
4.3.2	Notifications to Subscriber by the CA of Issuance of Certificate
4.4	Certificate Acceptance
4.4.1	Conduct Constituting Certificate Acceptance
4.4.2	Publication of the Certificate by the CA
4.4.3	Notification of Certificate Issuance by the CA to Other Entities
4.5	Key Pair and Certificate Usage
4.5.1	Subscriber Private Key and Certificate Usage
4.5.2	Relying Party Public Key and Certificate Usage
4.6	Certificate Renewal
4.6.1	Circumstances for Certificate Renewal
4.6.2	Who May Request Renewal
4.6.3	Processing Certificate Renewal Requests
4.6.4	Notification of New Certificate Issuance to Subscriber
4.6.5	Conduct Constituting Acceptance of a Renewal Certificate
4.6.6	Publication of the Renewal Certificate by the CA
4.6.7	Notification of Certificate Issuance by the CA to Other Entities
4.7	Certificate Rekey
4.7.1	Circumstances for Certificate ReKey
4.7.2	Who May Request Certification of a New Public Key
4.7.3	Processing Certificate Rekeying Requests
4.7.4	Notification of New Certificate Issuance to Subscriber
4.7.5	Conduct Constituting Acceptance of a Rekeyed Certificate
4.7.6	Publication of the Rekeyed Certificate by the CA
4.7.7	Notification of Certificate Issuance by the CA to Other Entities

Section No.	RFC 3647 Section
4.8	Certificate Modification
4.8.1	Circumstances for Certificate Modification

§3 WebTrust for CAs v1

No.	WebTrust for CAs v1 — Disclosures Criteria
	General
1	Identification of each CP and CPS for which the CA issues certificates
2	Community and applicability, including a description of the types of entities within the PKI and the applicability of certificates issued by the CA
3	Contact details and administrative provisions, including: <ul style="list-style-type: none"> • Contact person • Identification of Policy Authority • Street address • Version and effective date(s) of each CP and CPS
4	Any applicable provisions regarding apportionment of liability

No.	WebTrust for CAs v1 — Disclosures Criteria
5	Financial responsibility, including: <ul style="list-style-type: none"> • Indemnification by relying parties • Fiduciary relationships
6	Interpretation and enforcement, including: <ul style="list-style-type: none"> • Governing law • Severability, survival, merger, and notice • Dispute resolution procedures
7	Fees, including: <ul style="list-style-type: none"> • Certificate issuance or renewal fees • Certificate access fees • Revocation or status information access fees • Fees for other services such as policy information • Refund policy
8	Publication and repository requirements, including: <ul style="list-style-type: none"> • Publication of CA information • Frequency of publication • Access controls
9	Compliance audit requirements, including: <ul style="list-style-type: none"> • Frequency of entity compliance audit • Auditor’s relationship to audited party • Topics covered by audit • Actions taken as a result of deficiency • Communication of results
10	Description of the conditions for applicability of certificates issued by the CA that reference a specific Certificate Policy, including: <ul style="list-style-type: none"> • Specific permitted uses for the certificates if such use is limited to specific applications • Limitations on the use of certificates if there are specified prohibited uses for such certificates
11	CA and/or RA obligations: <ul style="list-style-type: none"> • Notification of issuance of a certificate to the subscriber who is the subject of the certificate being issued • Notification of issuance of a certificate to others than the subject of the certificate • Notification of revocation or suspension of a certificate to the subscriber whose certificate is being revoked or suspended • Notification of revocation or suspension of a certificate to others than the subject whose certificate is being revoked or suspended.
12	RA obligations, including: <ul style="list-style-type: none"> • Identification and authentication of subscribers • Validation of revocation and suspension requests • Verification of subscriber renewal or rekey requests

No.	WebTrust for CAs v1 — Disclosures Criteria
13	Repository obligations, including: <ul style="list-style-type: none"> • Timely publication of certificates and Certificate Revocation Lists
14	Subscriber obligations, including: <ul style="list-style-type: none"> • Accuracy of representations in certificate application • Protection of the subscriber’s private key • Restrictions on private key and certificate use • Notification upon private key compromise
15	Relying party obligations, including: <ul style="list-style-type: none"> • Purposes for which certificate is used • Digital signature verification responsibilities • Revocation and suspension checking responsibilities • Acknowledgment of applicable liability caps and warranties
16	Any applicable reliance or financial limits for certificate usage
Key Life Cycle Management	
17	CA key pair generation, including: <ul style="list-style-type: none"> • What key sizes are required • What key generation algorithm is required • Whether key generation is performed in hardware or software • What standards are required for the module used to generate the keys (for example, the required ISO 15782-1/FIPS 140-1/ANSI X9.66 level of the module) • For what purposes the key may be used • For what purposes usage of the key is restricted • The usage periods or active lifetimes for the CA public and private key, respectively
18	CA private key protection, including: <ul style="list-style-type: none"> • What standards are required for the module used to store the CA private signature key (for example, the required ISO 15782-1/FIPS 140-1/ANSI X9.66 level of the module) • Whether the CA private key is maintained under <i>m</i> out of <i>n</i> multiperson control • Whether the CA private signature key is escrowed • Whether the CA private signing key is backed up • Whether the CA private and public signature keys are archived
19	Whether the CA provides subscriber key management services and a description of the services provided
20	CA public key distribution, including a description of how the CA’s public key is provided securely to subscribers and relying parties
21	Key changeover, including a description of the procedures used to provide a new public key to a CA’s users

No.	WebTrust for CAs v1 — Disclosures Criteria
22	Subscriber key pair generation (if the CA provides subscriber key pair generation services), including: <ul style="list-style-type: none"> • How the subscriber’s private key is provided securely to the subscriber • What key sizes are required • What key generation algorithm is required • Whether key pair generation is performed in hardware or software • What standards are required for the module used to generate the keys (for example, the required ISO 15782-1/FIPS 140-1/ANSI X9.66 level of the module) • For what purposes the key may be used • For what purposes usage of the key is restricted
23	Subscriber private key protection (if the CA provides subscriber key management services), including: <ul style="list-style-type: none"> • Whether the subscriber’s decryption private key is backed up • Whether the subscriber’s decryption private key is archived • Under what conditions a subscriber’s private key can be destroyed • Whether subscriber private decryption keys are escrowed by the CA.
	Certificate Life Cycle Management
24	Whether certificate suspension is supported
25	Initial registration, including a description of the CA’s requirements for the identification and authentication of subscribers and validation of certificate requests during entity registration or certificate issuance: <ul style="list-style-type: none"> • Types of names assigned to the subject and rules for interpreting various name forms • Whether names have to be meaningful or not • Whether names have to be unique • How name claim disputes are resolved • Recognition, authentication, and role of trademarks • If and how the subject must prove possession of the companion private key for the public key being provided for a certificate • How the subscriber’s public key is provided securely to the CA for issuance of a certificate • Authentication requirements for organizational identity of subject • Authentication of individual identity • Required certificate request data • How the CA verifies the authority of the subscriber to request a certificate • How the CA verifies the accuracy of the information included in the subscriber’s certificate request • Whether the CA checks certificate requests for errors or omissions

No.	WebTrust for CAs v1 — Disclosures Criteria
26	Registration requirements where external Registration Authorities are used, including the CA's procedures for: <ul style="list-style-type: none"> • Validating the identity of external Registration Authorities • Authorizing external Registration Authorities • Requirements for the external Registration Authority to secure that part of the certificate application, certificate renewal, and certificate rekey processes for which the RA assumes responsibility • How the CA verifies the authenticity of certificate request submissions received from an external RA
27	Certificate renewal, including a description of the CA's procedures for the following: <ul style="list-style-type: none"> • Notifying subscribers of the need for renewal • Identification and authentication • Renewal request verification
28	Routine rekey, including a description of the identification and authentication and rekey request verification procedures
29	Rekey after revocation or expiration, including a description of the identification and authentication and rekey request verification procedures for rekey after the subject certificate has been revoked
30	Certificate issuance, including a description of the requirements regarding the following: <ul style="list-style-type: none"> • Issuance of a certificate • Notification to the applicant of such issuance • Certificate format requirements • Validity period requirements • Extension field requirements (meaning, what extension fields are honoured, and how they are to be populated)
31	Certificate acceptance, including a description of the requirements regarding acceptance of an issued certificate and for consequent publication of certificates
32	Certificate distribution, including a description of the CA's established mechanism (for example, a repository such as a directory) for making available to relying parties the certificates and Certificate Revocation Lists that it issues

No.	WebTrust for CAs v1 — Disclosures Criteria
33	<p>Certificate revocation, including:</p> <ul style="list-style-type: none"> • Circumstances under which a certificate may or must be revoked • Identification and authentication procedures required for revocation requests • Procedures used for initiation, authorization, and verification of certificate revocation requests • Revocation request grace period available to the subscriber • Any variations on the preceding stipulations in the event that the revocation is the result of private key compromise (as opposed to other reasons for revocation) • Procedures to provide a means of rapid communication to facilitate the secure and authenticated revocation of: (1) one or more certificates of one or more entities; (2) the set of all certificates issued by a CA based on a single public/private key pair used by a CA to generate certificates; and (3) all certificates issued by a CA, regardless of the public/private key pair used • Procedures for notifying the subscriber upon revocation of the subscriber's certificate • Whether the external Registration Authority is notified upon the revocation of a subscriber's certificate for which the revocation request was processed by the external RA • How and when the subscriber's certificate status information is updated upon certificate revocation

No.	WebTrust for CAs v1 — Disclosures Criteria
34	<p>Certificate suspension, including:</p> <ul style="list-style-type: none"> • Circumstances under which a certificate may or must be suspended • Identification and authentication procedures required for revocation requests • Procedures used for initiation, authorization, and verification of certificate suspension requests • How long the suspension may last • Circumstances under which the suspension of a certificate may or must be lifted • Authorization criteria to request the lifting of a certificate suspension • Any variations on the preceding stipulations if the suspension is the result of private key compromise (as opposed to other reasons for suspension) • Procedures to provide a means of rapid communication to facilitate the secure and authenticated suspension of: (1) one or more certificates of one or more entities; (2) the set of all certificates issued by a CA based on a single public/private key pair used by a CA to generate certificates; and (3) all certificates issued by a CA, regardless of the public/private key pair used • Procedures for notifying the subscriber upon suspension of the subscriber's certificate • Whether the external RA is notified upon the suspension of a subscriber's certificate for which the suspension request was processed or submitted by the external RA • How and when the subscriber's certificate status information is updated upon certificate suspension and the lifting of a certificate suspension

No.	WebTrust for CAs v1 — Disclosures Criteria
35	<p>Provision of certificate status information, including:</p> <ul style="list-style-type: none"> • What mechanism is used (CRLs, OCSP, other) • If a CRL mechanism is used, the issuance frequency • Requirements on relying parties to check CRLs • Online revocation/status checking availability • Requirements on relying parties to perform online revocation/status checks • Other forms of revocation advertisements available • Requirements on relying parties to check other forms of revocation advertisements • Any variations on the above stipulations when the suspension or revocation is the result of private key compromise (as opposed to other reasons for suspension or revocation) • The CA's requirements for archival and retention of CRLs or other certificate status information • Whether copies of all certificates issued (including all expired, revoked or suspended certificates) are retained and disclosure of the retention period • If an online status mechanism is used (for example, OCSP), certificate status request content requirements • If an online status mechanism is used (for example, OCSP), definitive response message data content requirements • What key is used to digitally sign definitive response messages • Whether the CA signs error messages when returned in response to certificate status requests
36	<p>Certificate profile, including:</p> <ul style="list-style-type: none"> • Version number(s) supported • Certificate extensions populated and their criticality • Cryptographic algorithm object identifiers • Name forms (meaning, naming hierarchy used to ensure that the certificate subject can be uniquely identified — if required) used for the CA, RA, and subscribers' names • Name constraints used and the name forms used in the name constraints • Applicable Certificate Policy Object Identifier(s) • Usage of the policy constraints extension • Policy qualifiers syntax and semantics • Processing semantics for the critical Certificate Policy extension
37	<p>CRL profile, including:</p> <ul style="list-style-type: none"> • Version numbers supported for CRLs • CRL and CRL entry extensions populated and their criticality

No.	WebTrust for CAs v1 — Disclosures Criteria
38	Integrated circuit card (ICC) life cycle management, including: <ul style="list-style-type: none"> • Whether ICCs are issued by the CA (or RA) • If supported, a description of the CA’s ICC life cycle management processes, including a description of the ICC distribution process
	CA Environmental Controls
39	CPS and CP administration: <ul style="list-style-type: none"> • CPS and CP change control procedures • Publication and notification policies • CPS and CP approval procedures
