

The Draft National Fiberisation and Connectivity Plan (NFCP)

Industry Consultation

October 29, 2018

Draft National Fiberisation and Connectivity Plan - Industry Consultation

**Ballroom 1, Level 3
Putrajaya Marriott Hotel**

Monday
October 29, 2018

8:30 am – 9.15 am	Registration and Breakfast
9.30 am – 9.45 am	Opening Remarks
9.45 am – 10.30 am	Presentation on the Draft National Fiberisation and Connectivity Plan
10.30 am – 11.30 am	Question and Answer
11.30 am	Session ends

The world has moved from just broadband plans...

	EU	INDIA	UNITED KINGDOM	SINGAPORE
Name / Year	<ul style="list-style-type: none"> Digital Agenda for Europe (DAE) 2010 Gigabit Society 2016 	National Digital Communications Policy May 2018 (approved Sept 2018) “Fibre First Initiative”	Future Telecoms Infrastructure Review July 2018	iN2015 (2005) Infocomm Media 2025 (2015) (some areas under consultation)
Speed targets	Gigabit Society - all economic drivers with Gigabit connectivity, all urban areas, railroads and highways with 5G, 100Mbps connectivity	<ul style="list-style-type: none"> 1Gbps at all Gram Panchayats (village councils) 50Mbps to all citizens 100Mbps to institutions 	Gigabit-capable roll-out	iN2015 – Fixed (1Gbps), Wireless (5Mbps)
Coverage targets	<ul style="list-style-type: none"> Major cities with 5G by 2020 All households 	<ul style="list-style-type: none"> Fixed to 50% HH Connectivity to all areas 	<ul style="list-style-type: none"> 15 mil houses fibred by 2025 Nationwide fibre by 2033 Competition of 2 Gigabit networks 	Nationwide by 2012
Public utility / RoW etc	Broadband as universal service - EU Universal Service Directive	Telecom infra as “critical and essential infrastructure”, similar to water, railways, etc	Reduce barriers to deployment – simplify wayleave agreements, standardise local authority processes, easy access to passive infra	<ul style="list-style-type: none"> Fibre-ready scheme for residential
Other areas	5G action plan, Wi-Fi for Europe, prioritising investments	5G deployment, R&D, local manufacturing, start-ups, capacity building, improve public service, IR4.0, security and data protection, disaster relief	Reduce cost of deployment for fixed and mobile, unrestricted access to poles and ducts, promote market entry and new network operators, switchover to fibre, separation of Openreach, 5G initiatives	<ul style="list-style-type: none"> Heterogenous Network (HETNET), Smart Nation Platform, Wireless@SG Data, experimentation and connectivity

Rancangan Malaysia ke-11 (2016-2020)

- Mid term review

TARGETS

Broadband services

- 95% in populated areas by 2020
- 100Mbps in all households in state capitals and selected high impact growth areas by 2020
- 20Mbps in 50% of households in suburban and rural areas by 2020

Broadband affordability

- Reduction of broadband cost to 1% of GNI by 2020

Infrastructure planning

- Collaboration between state and local authorities on the planning and deployment of digital infrastructure
- Smart cities deployment

PERFORMANCE AND CHALLENGES

Broadband services

- 92.1% in populated areas in 2017

Broadband affordability

- Broadband price at 1.1% of GNI as at 2017
- MSAP implemented in Jan 2018

Infrastructure planning

- Gazette of UBBL by all states except Wilayah Persekutuan
- Right-of-Way (RoW) and permitting challenges by local authorities
- Exclusivity in planning and approval resulting in increased cost and quality of service
- Inconsistency in local procedures delay roll-out initiatives

WAY FORWARD

Broadband services

- Improve fibre coverage and commercial deployment for broadband coverage via the NFCP

Broadband affordability

- Ensure affordability for broadband services while ensuring continued investments

Infrastructure planning

- Enforce UBBL amendment for new developments for commercial and residential properties
- Amend relevant laws for broadband to be recognised as public utility
- Address RoW, permits and complex procedures

The NFCP

- An Overview

1. The NFCP was developed in response to the urgent need, among others, to improve broadband quality and coverage, reduce broadband price, enable Internet access for all, and expand fibre networks.
2. The communications infrastructure must be able to support the needs of the country in this digital era, and enable all Malaysians to harness the vast opportunities offered by new technologies and innovations.
3. The NFCP is intended to provide clarity in terms of strategic direction for the implementation policies/initiatives that support the digital economy, whilst creating a conducive environment to facilitate adoption of future technologies.
4. The overall implementation timeline of the NFCP will be for five (5) years until 2023.

Addressing challenges on coverage, affordability and quality digital infrastructure

Context

Coverage, affordability and quality digital infrastructure remain a major challenge

Countries are **moving beyond** mere broadband plans and low speed

Digital infrastructure is important to address balanced regional growth, income disparity, etc

However, governance and transparency are also important to assist in addressing coverage challenges

Neighbouring countries are moving fast to install fibre (Vietnam has 6m subs, Indonesia has 2m subs, while Thailand has 7.6 premises passed, and Philippines has 2.5m) *

High fixed coverage is desirable, but at what cost?

Issues

Addressing inadequate coverage

- Expanding current LTE coverage from 80% to 95% and beyond
- Expanding fibre coverage and use
- Improve connectivity for Sabah and Sarawak
- Ensuring spectrum availability, and efficient use of spectrum

Ensuring affordable services

- Promote increased penetration for fixed broadband (2.6m subscribers @Q2 '18)
- Addressing SME and business needs (66% employees are working in SMEs**, 900k SME establishments)

Improving quality of service

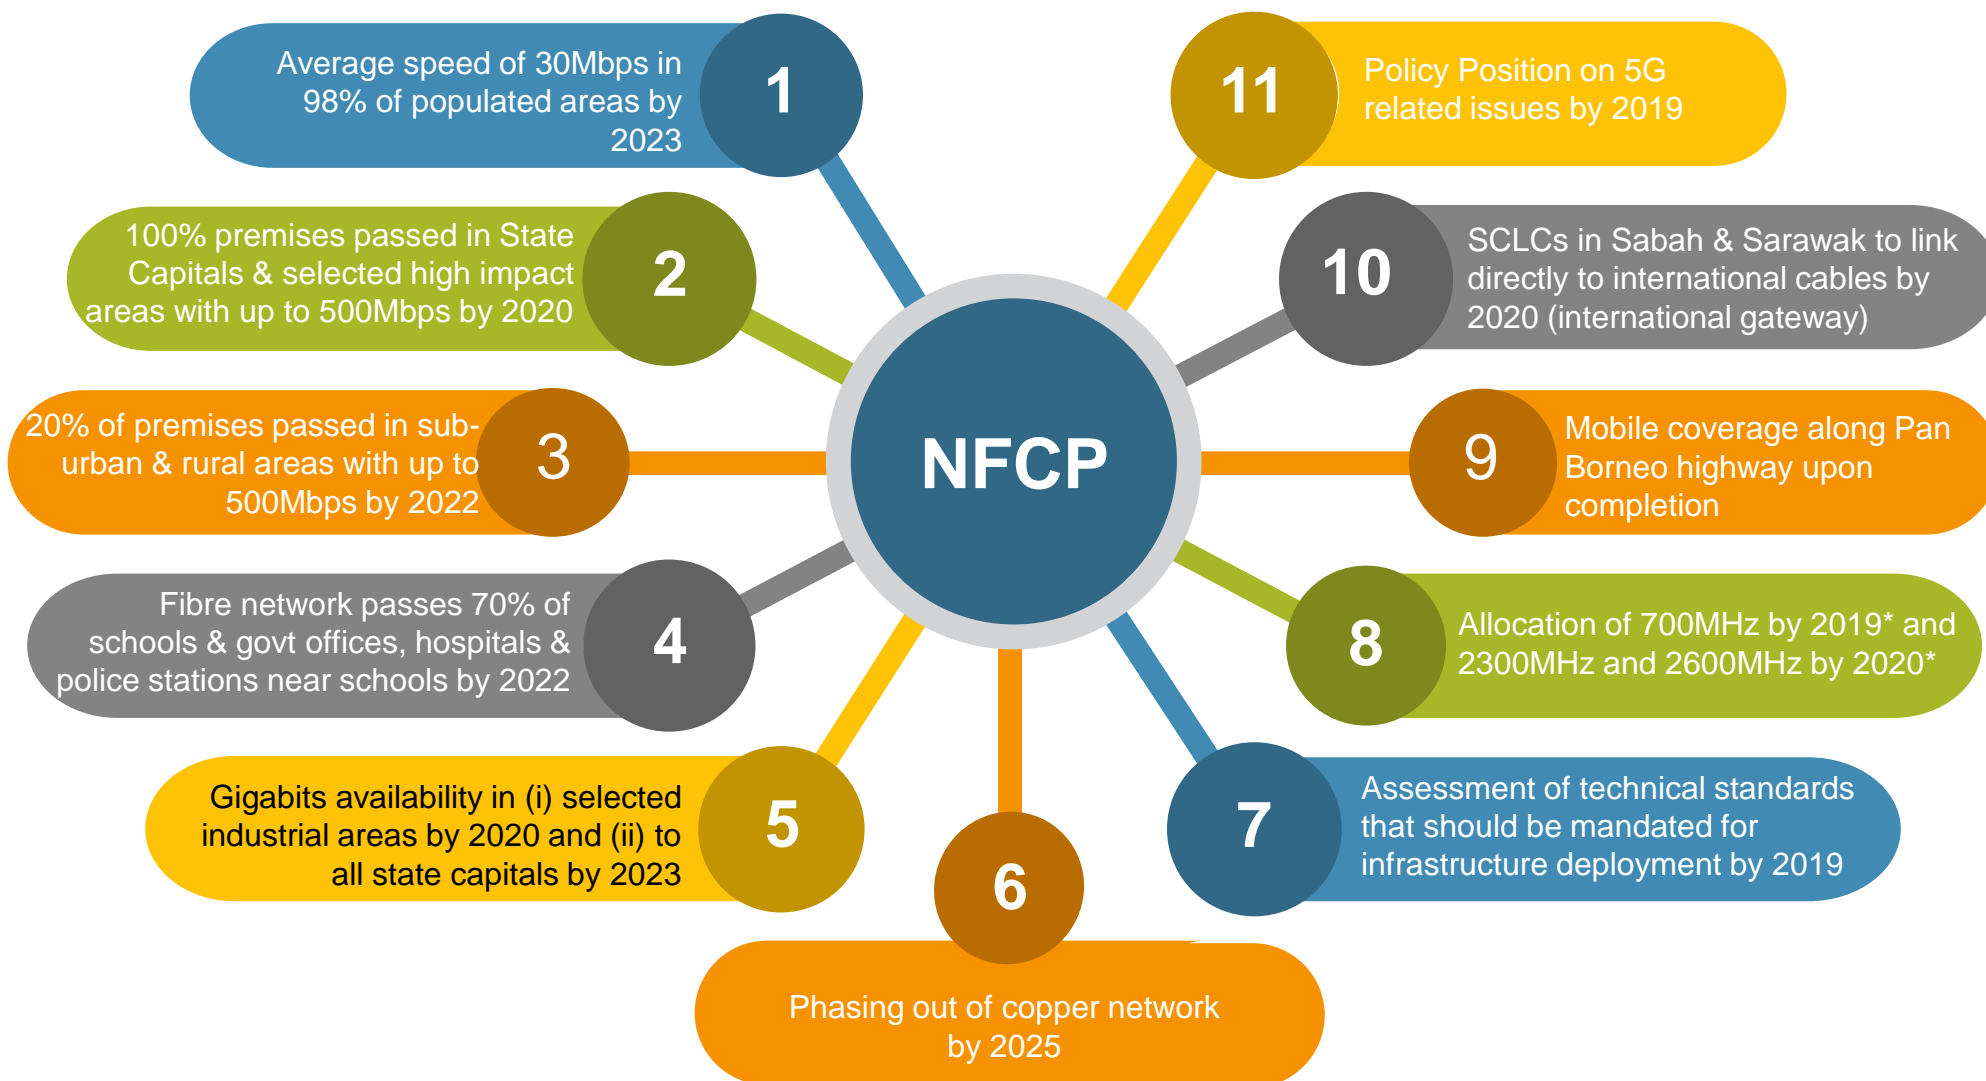

- Increased competition will drive operators to improve in terms of price and quality
- Demand from business will drive quality
- Better bandwidth, especially Sabah and Sarawak will promote equitable growth
- Quality installation (esp at homes)

Strategy (NFCP)

- Fibre-first, plan for copper phase-out
- Liberalise strategic activities to allow for increased competition (multiple operators to expand fixed broadband infrastructure)
- Prepare spectrum for 5G and other requirements
- Planning broadband as public utility
- Share infrastructure and use federal/state buildings to improve roll-out rate
- Sustainable and environmentally-friendly infra
- Addressing bottlenecks for connectivity
- Reduce roll-out cost by sharing passive infra
- Coordinate planning to reduce delay, civil infra cost
- Establish new approach for pricing beyond 2020
- Universal access for broadband
- Addressing QoS issues effectively and transparent reporting of licensees' performance
- Establish codes for "world-class" installation to ensure speed commitment and quality are met
- Develop SOP for developers and other stakeholders to improve transparency, understanding and delivery of installation

Targets for NFCP (1/2)

A. Ensure optimum deployment of digital infrastructure

*Subject to MCMC's study on spectrum optimisation

Targets for NFCP (2/2)

B. Provision of affordable services and improve quality to drive the digital economy

12. Entry level fixed broadband package at 1% of GNI by 2020

13. Double the speed at half the price by 2019

14. Yearly publication of QoS Report

C. Promote competition

15. Extension of liberalisation in key strategic activities by 2019

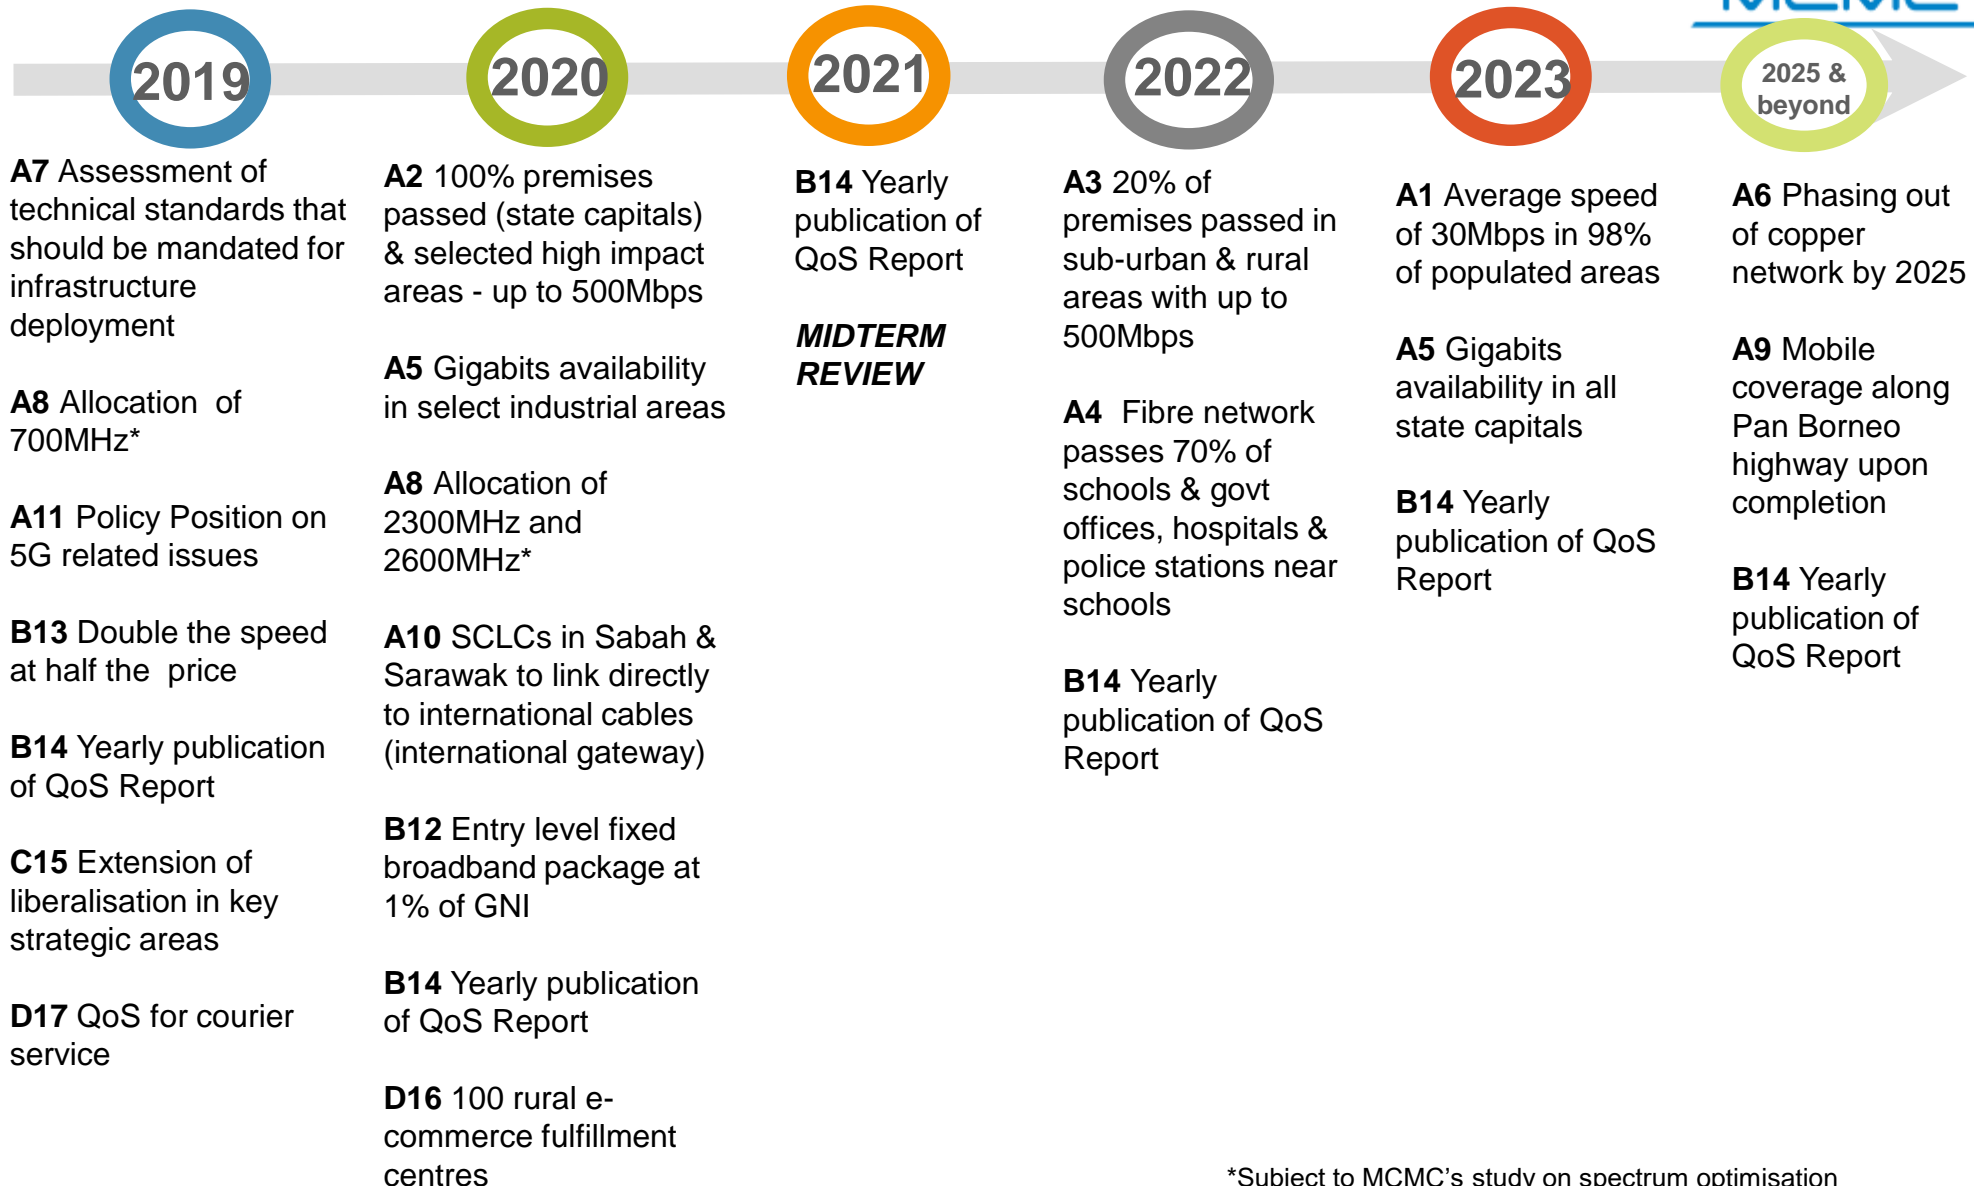

D. Participation in the digital economy

16. 100 rural e-commerce fulfillment centres by 2020

17. QoS for courier service by 2019

NFCP targets by year

*Subject to MCMC's study on spectrum optimisation

Challenges in implementing NFCP

Implementing policy approval on communications infrastructure as public utility

- Providing internet access for each household, upon demand
- Ensuring buy-in from stakeholders to roll-out infrastructure as public utility
- Ensuring quality communications infrastructure with a fibre first policy (including phasing-out copper networks)
- Amending relevant legislations including CMA98
- Promoting competition

Commitment from State Governments to reduce implementation cost and assist in infrastructure deployment

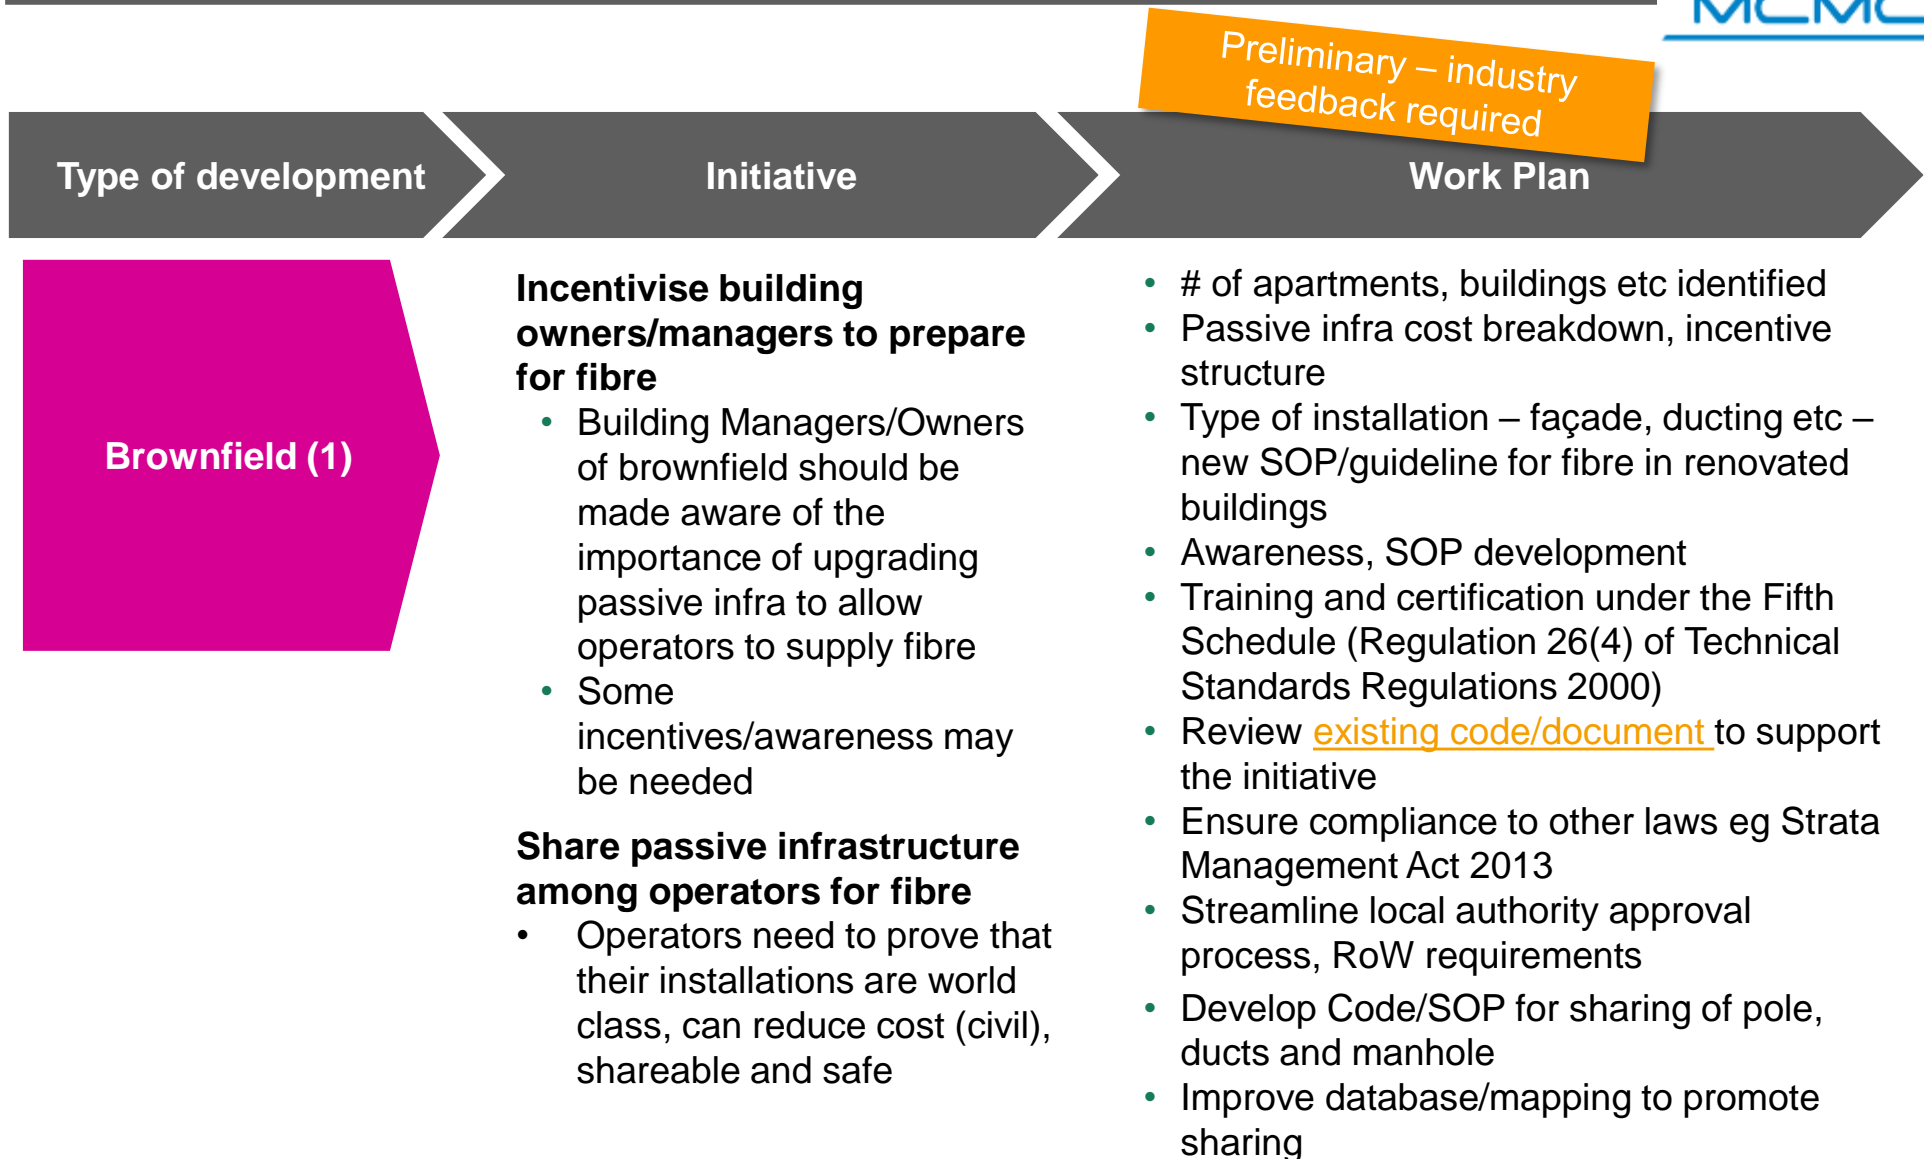

- Reducing implementation cost by streamlining RoW and removing OSA
- Coordinating planning and approval requirements with local and state authorities

Costing and Funding requirements to meet targets

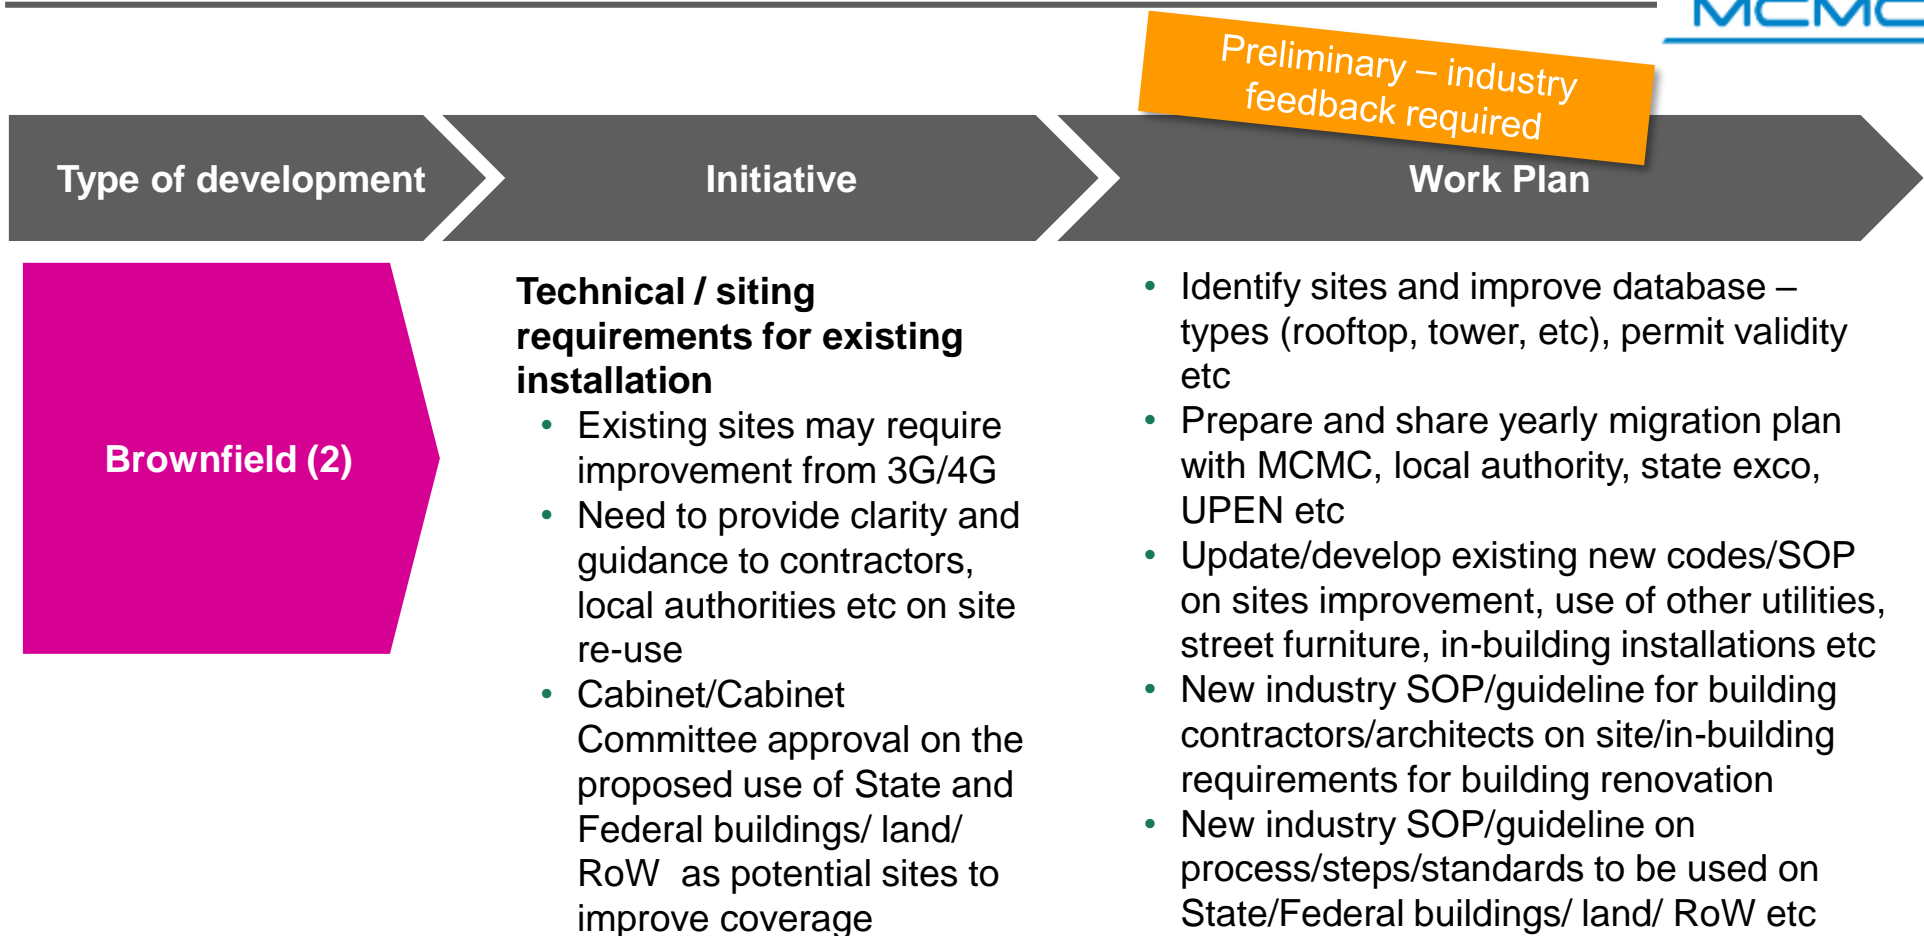

- Ensuring sufficient investments to drive roll-out of communications infrastructure
- Identifying cost and funding requirements to meet infrastructure and service requirements
- Meeting Rakyat's requirements for quality broadband at affordable price

Proposed Initiatives/ Work Plans for Relevant Targets

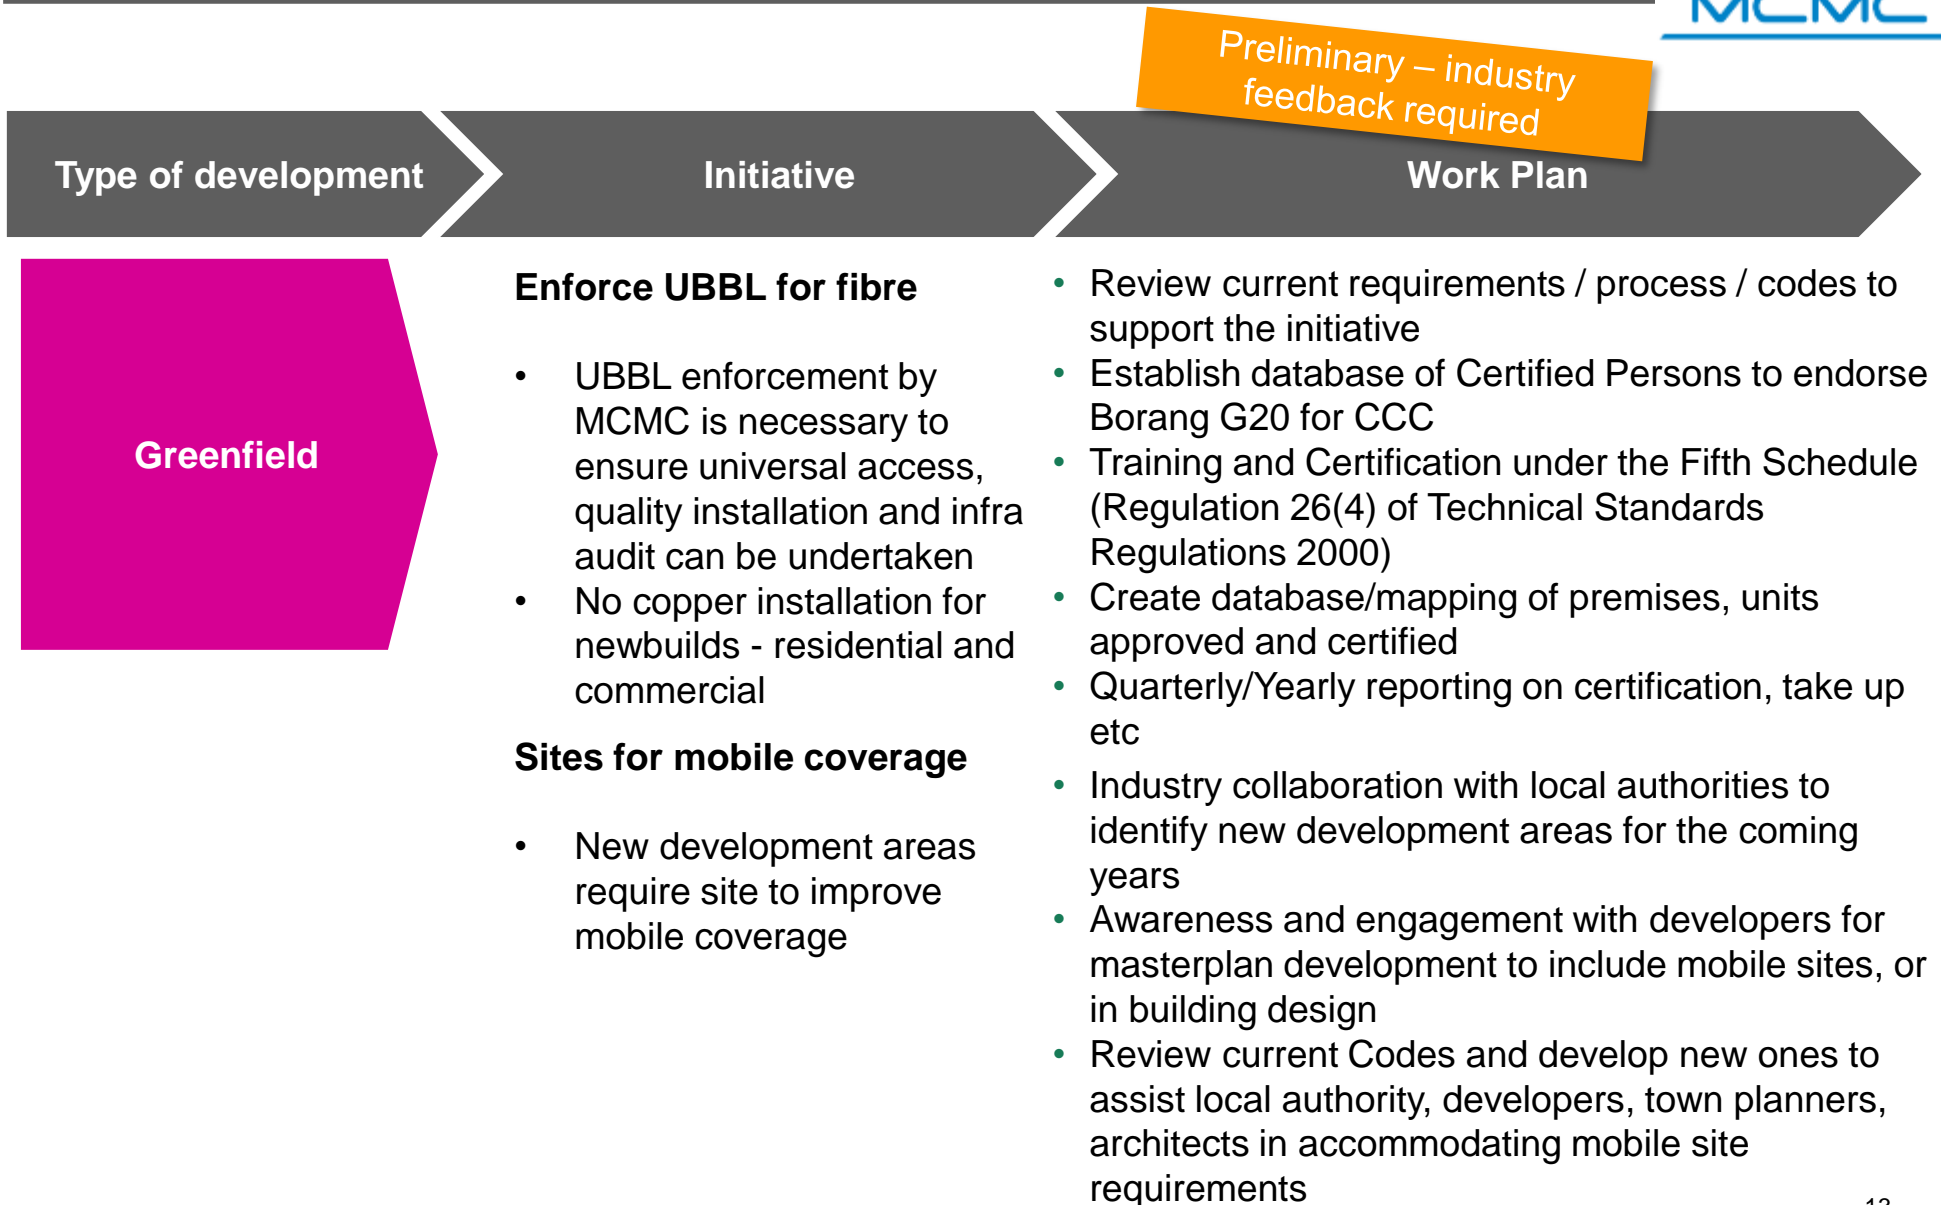

Targets A1, A2, A3, A4, A5, A6, A7 (1/15)

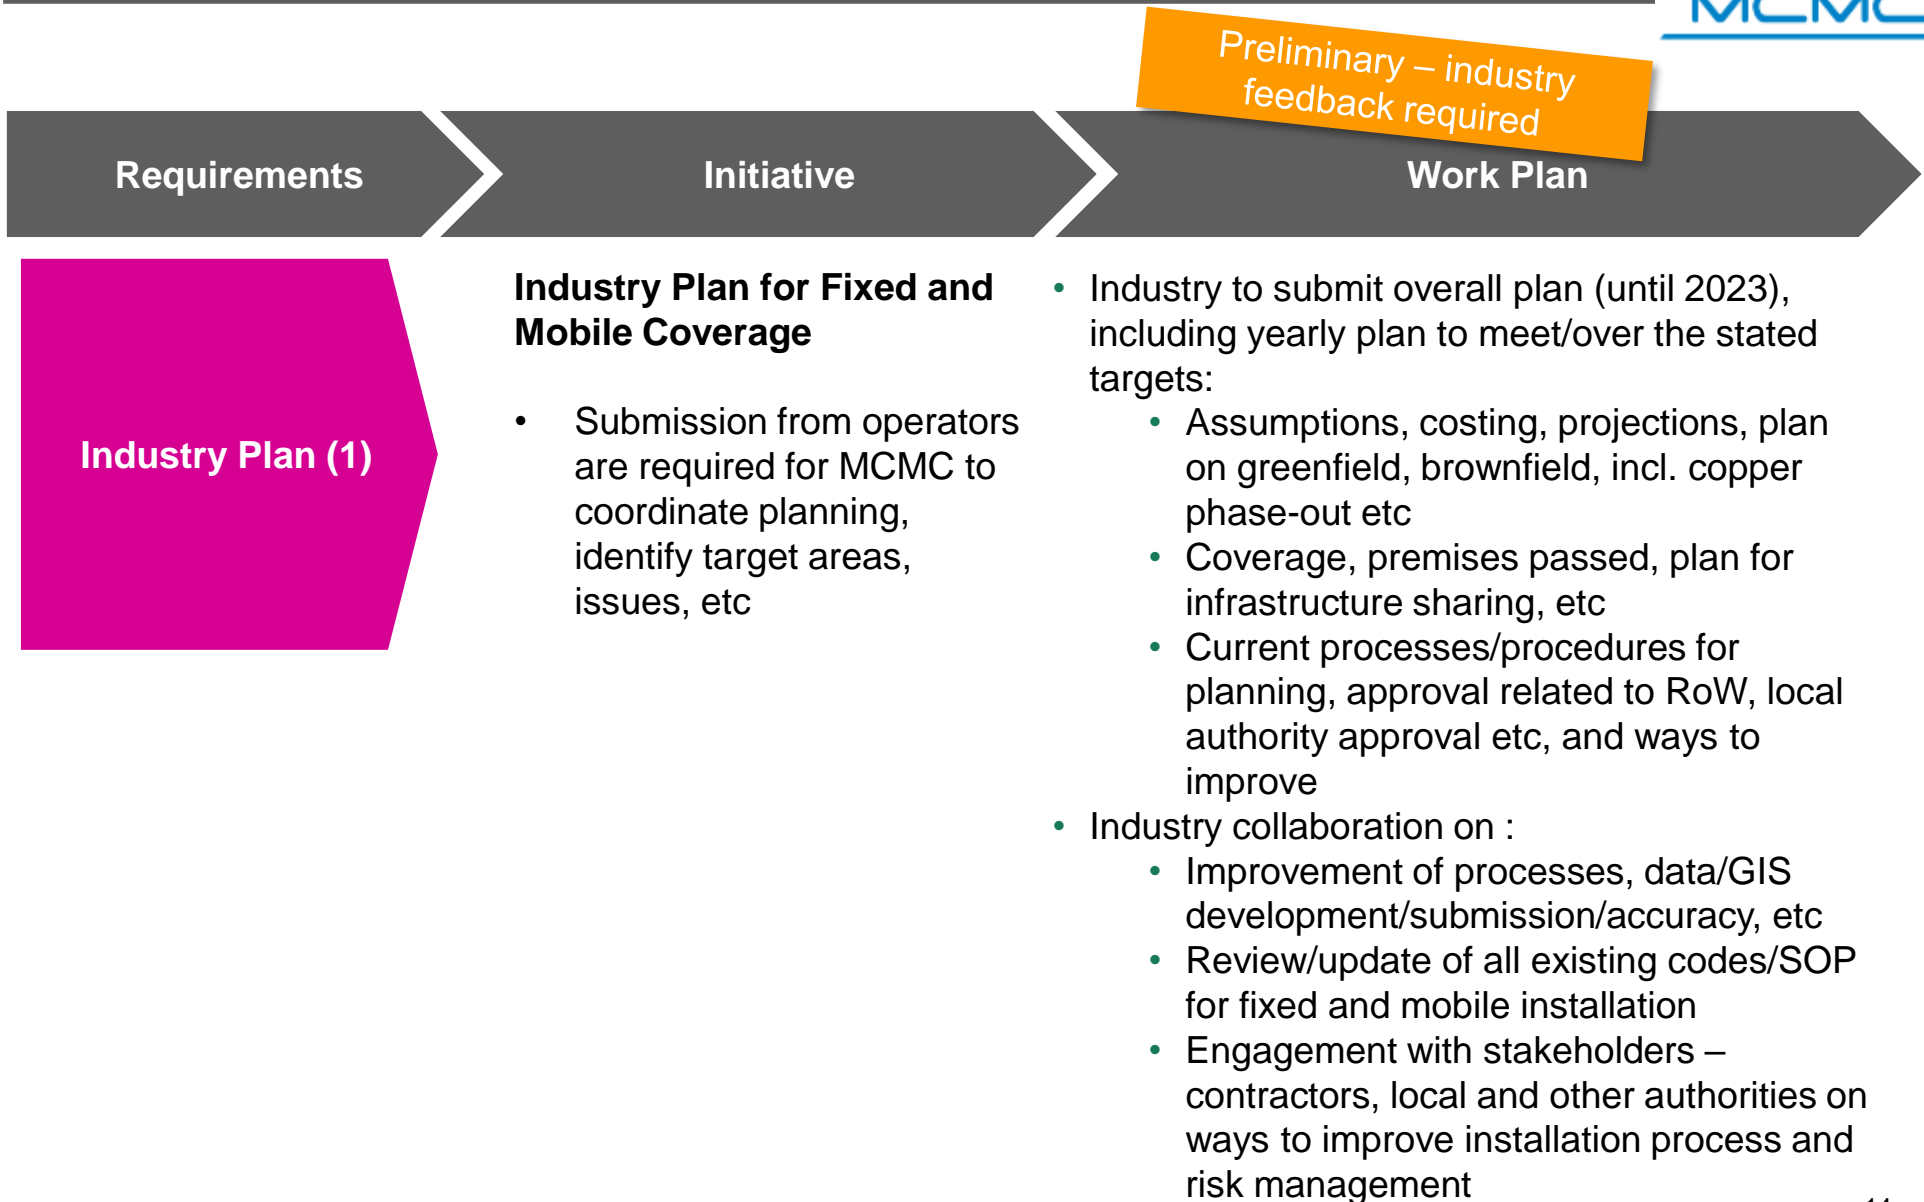

Targets A1, A2, A3, A4, A5 , A7 (2/15)

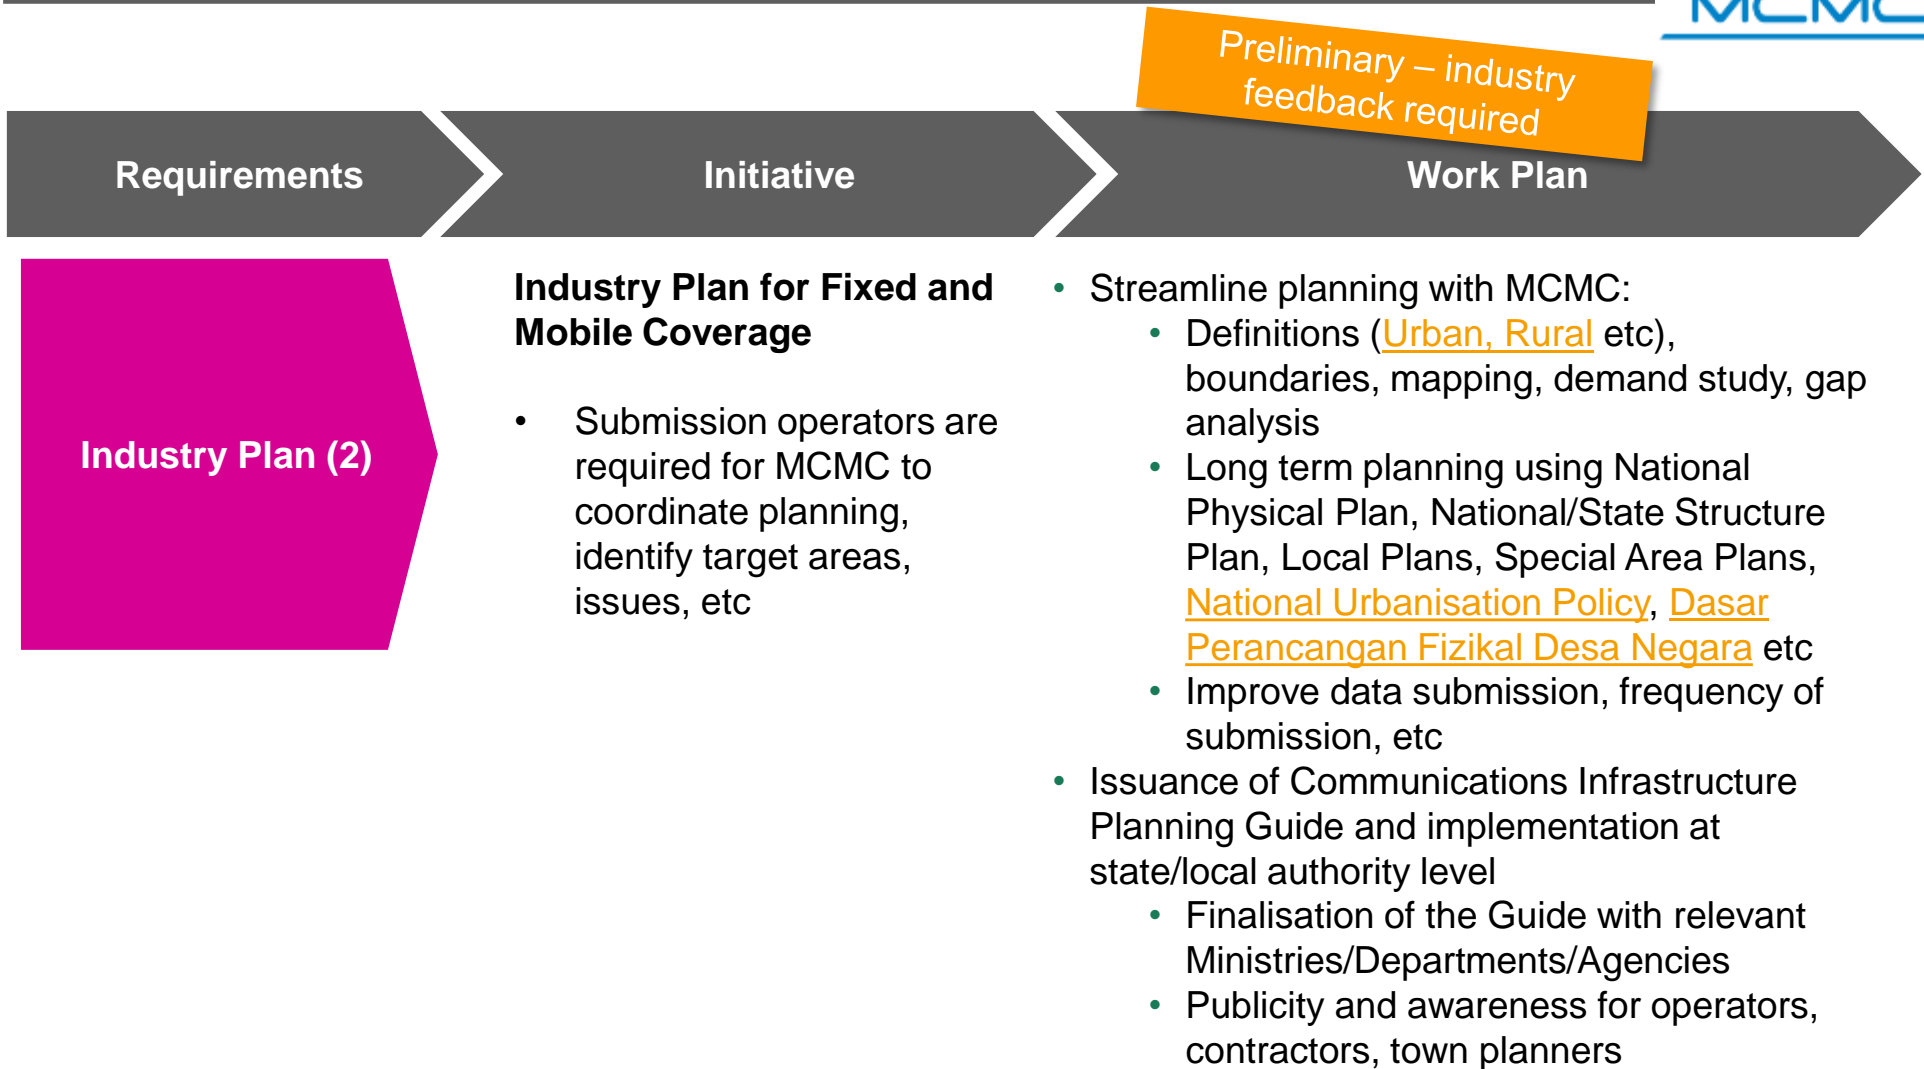

Targets A1, A2, A3, A4, A5, A6, A7 (3/15)

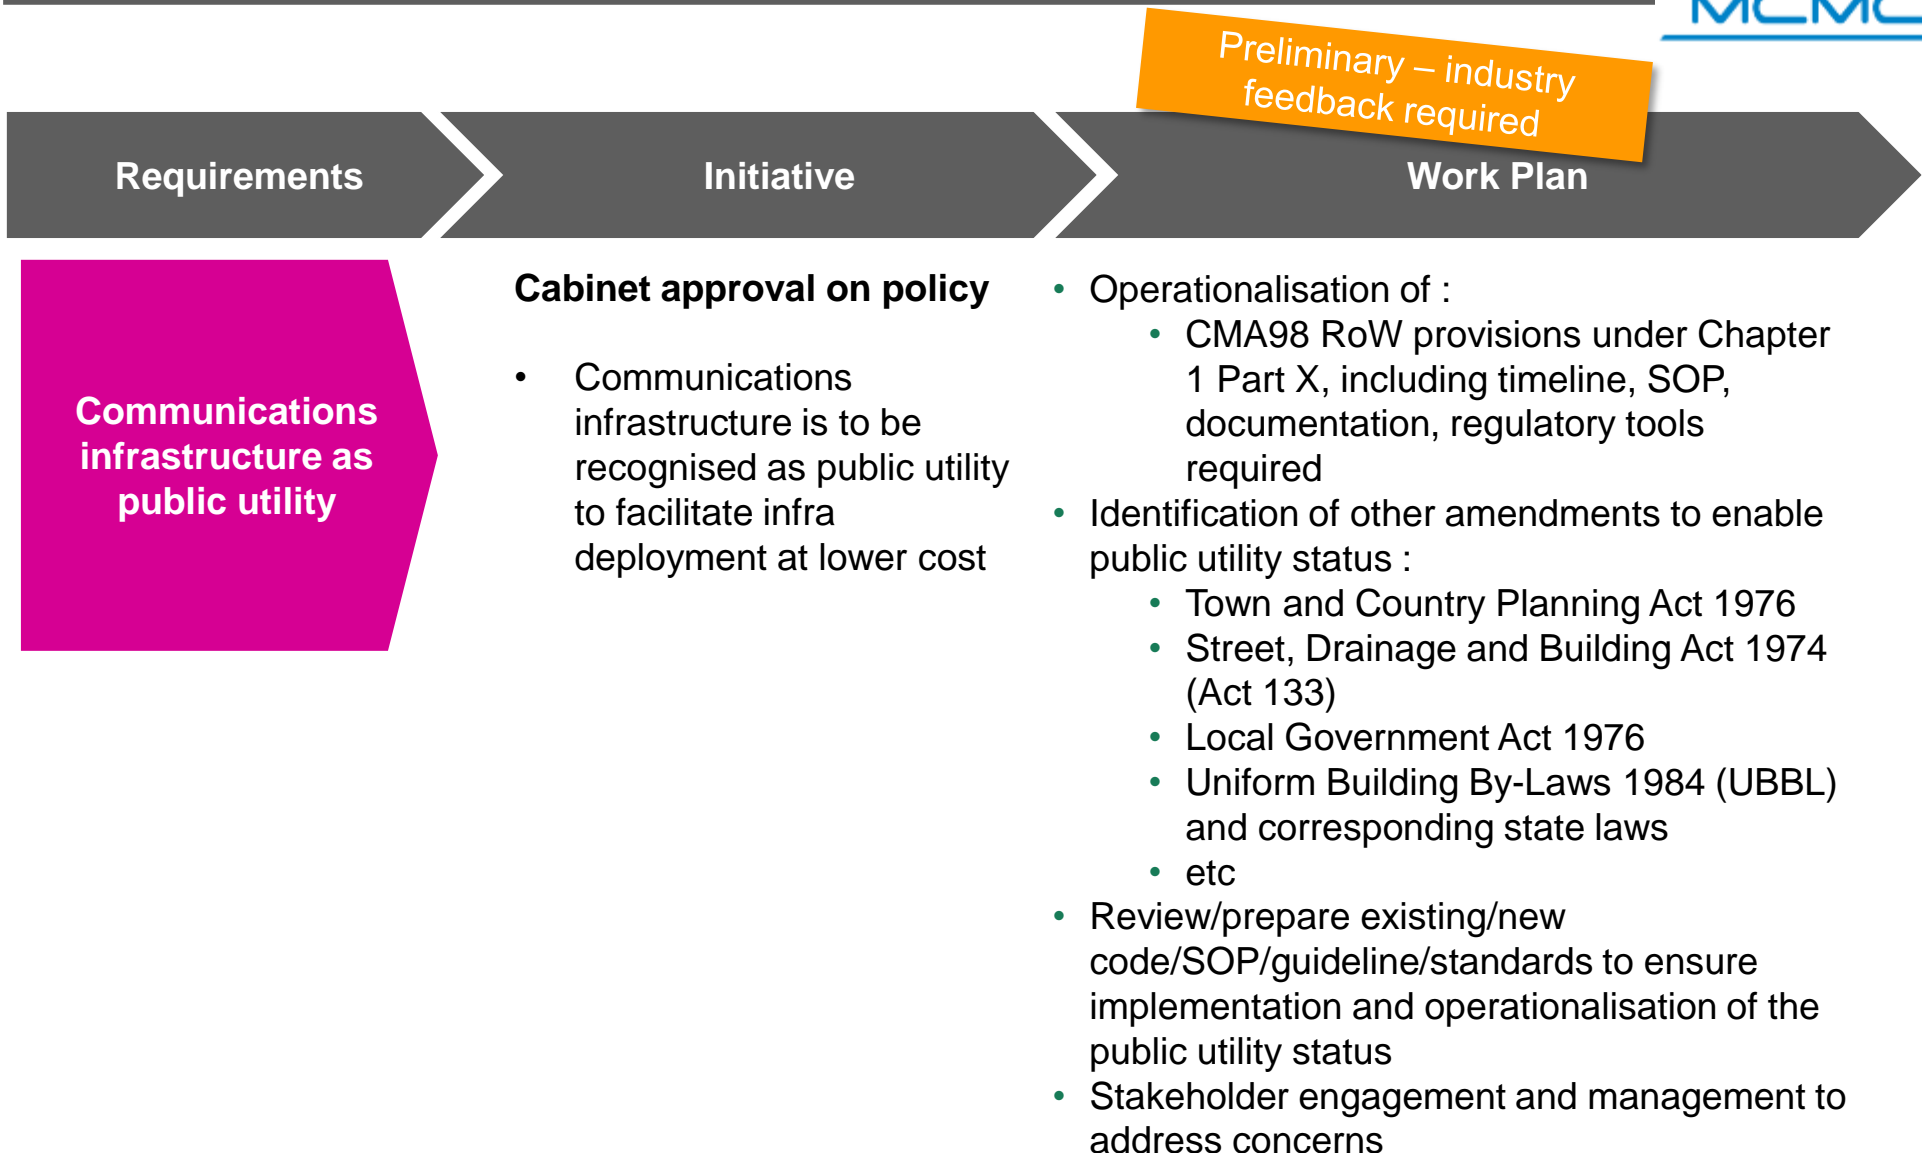

Targets A1, A2, A3, A4, A5, A6, A7 (4/15)

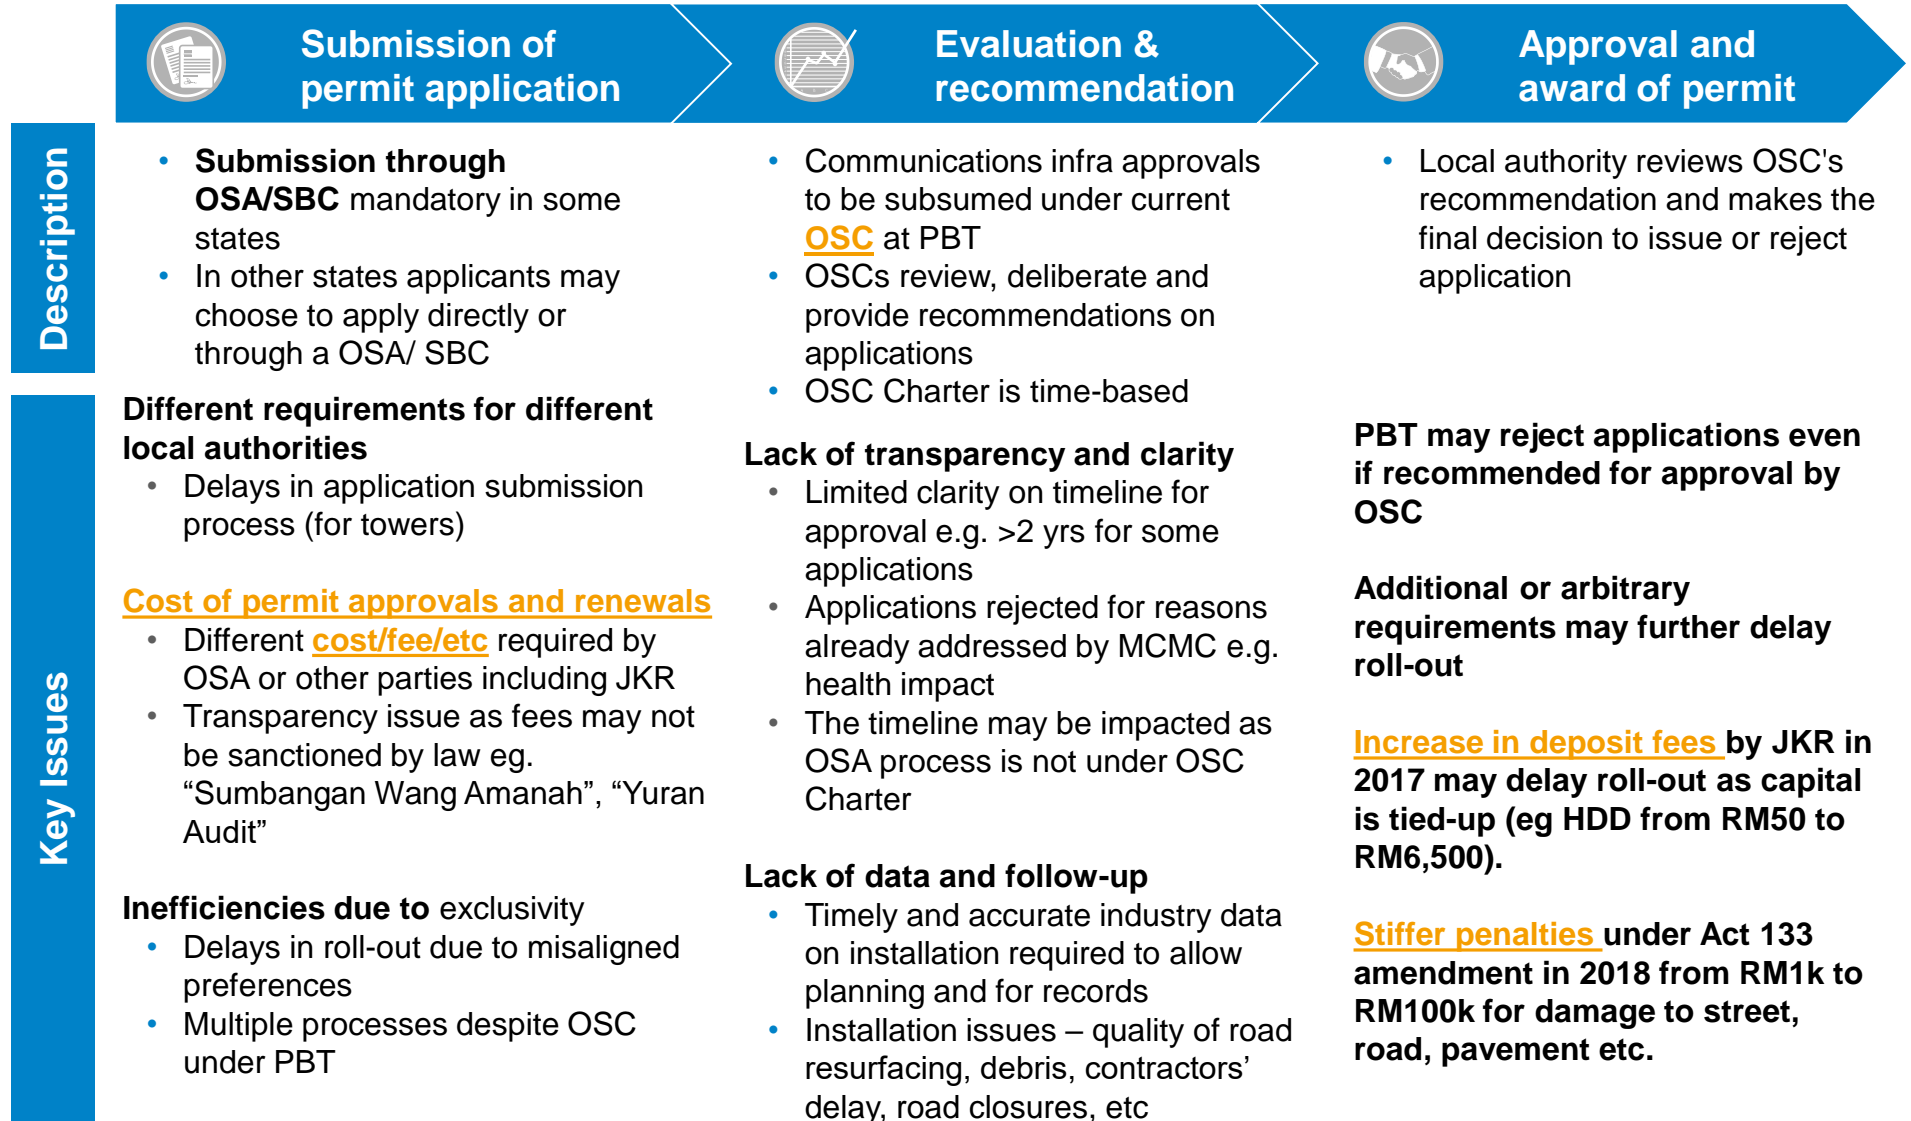

Targets A1, A2, A3, A4, A5 (5/15)

Targets A1, A2, A3, A4, A5, A9 (6/15)

Infrastructure roll-out is still a challenge on the ground

Right-of-Way (RoW) – Global Best Practices

Preliminary – industry feedback required

BEST PRACTICE

MALAYSIA – CURRENT PRACTICE AND APPROACH

Permission and Approvals

- US – shot-clock permission (90 days co-location/150 days) for tower - window for local authority approval
- Austria – Free RoW without authorisation for public property
- Germany – Free RoW and need to update database quickly
- Netherlands – free access and coordinated civil works
- Greece – comms regulator processes applications, authorities to approve within 4 months

- Current process on RoW – Local authorities, JKR, landowners etc
- Timeline for approvals, authorities/committees involved, forms required, online submission etc?
- Types of civil works requiring approvals
- Recommendations for improvements

Digging and Trenching, Fibre Installation

- “Call Before You Dig”
- China – FTTH in new buildings and refurbished homes
- Europe – high speed ready for new buildings and remodelled homes
- Portugal – 2 fibres per home and no monopoly for in-building

- Current industry practice on civil works – individual/collaboration? “Call Before You Dig”
- Contractors’ management, post-installation evaluation
- Sharing of infra – type of sharing, arrangements, etc
- Breakdown on cost – civil works, equipment, material etc – how these costs can be reduced/shared?
- Recommendations for improvements

Quality

- Only high quality grade fibre – 1700 fibre count (Boston), 1728-undersea fibre (2.8km undersea HK metro)
- GIS mapping – mandatory in North America, Western Europe, Japan, S. Korea, China (recommended), Bangladesh – nationwide mapping, S. Africa – mapping and display rollout status
- Fibre installation standard – standards to ensure speed and build requirements are met

- Current industry practice on GIS mapping – status, accuracy, audit etc, in addition to reporting to MCMC
- Mandatory underground mapping relevant in Malaysia?
- What are new and additional standards to ensure end-to-end quality installations?
- Recommendations to improve?
- Are Malaysian manufacturers ready to meet domestic demand?

Addressing infrastructure challenges – finding the middle ground

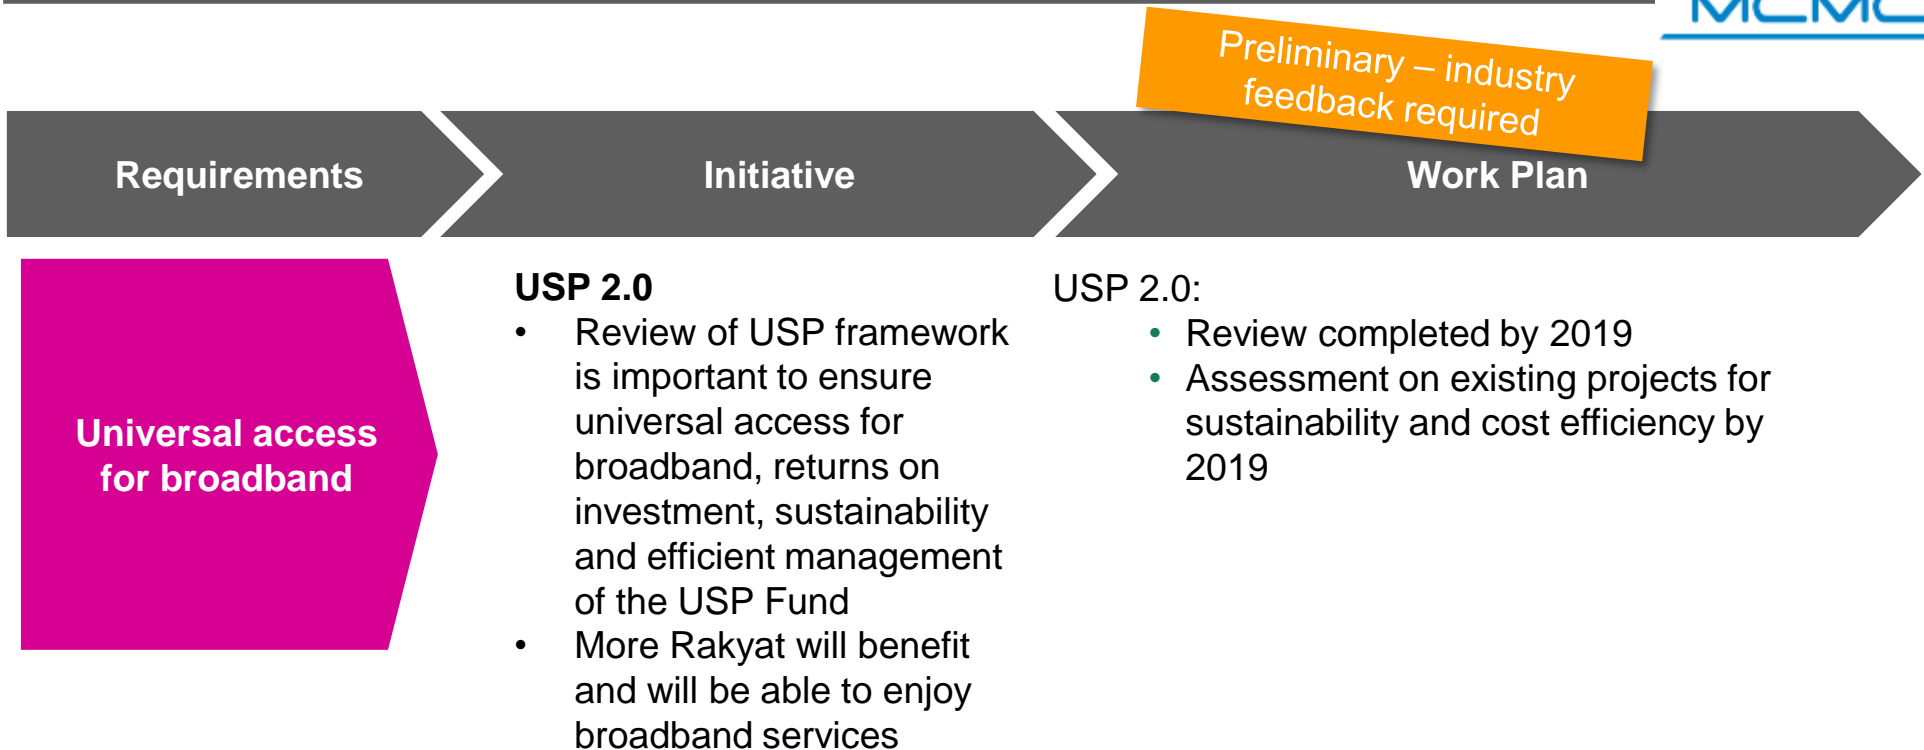

Preliminary – industry feedback required

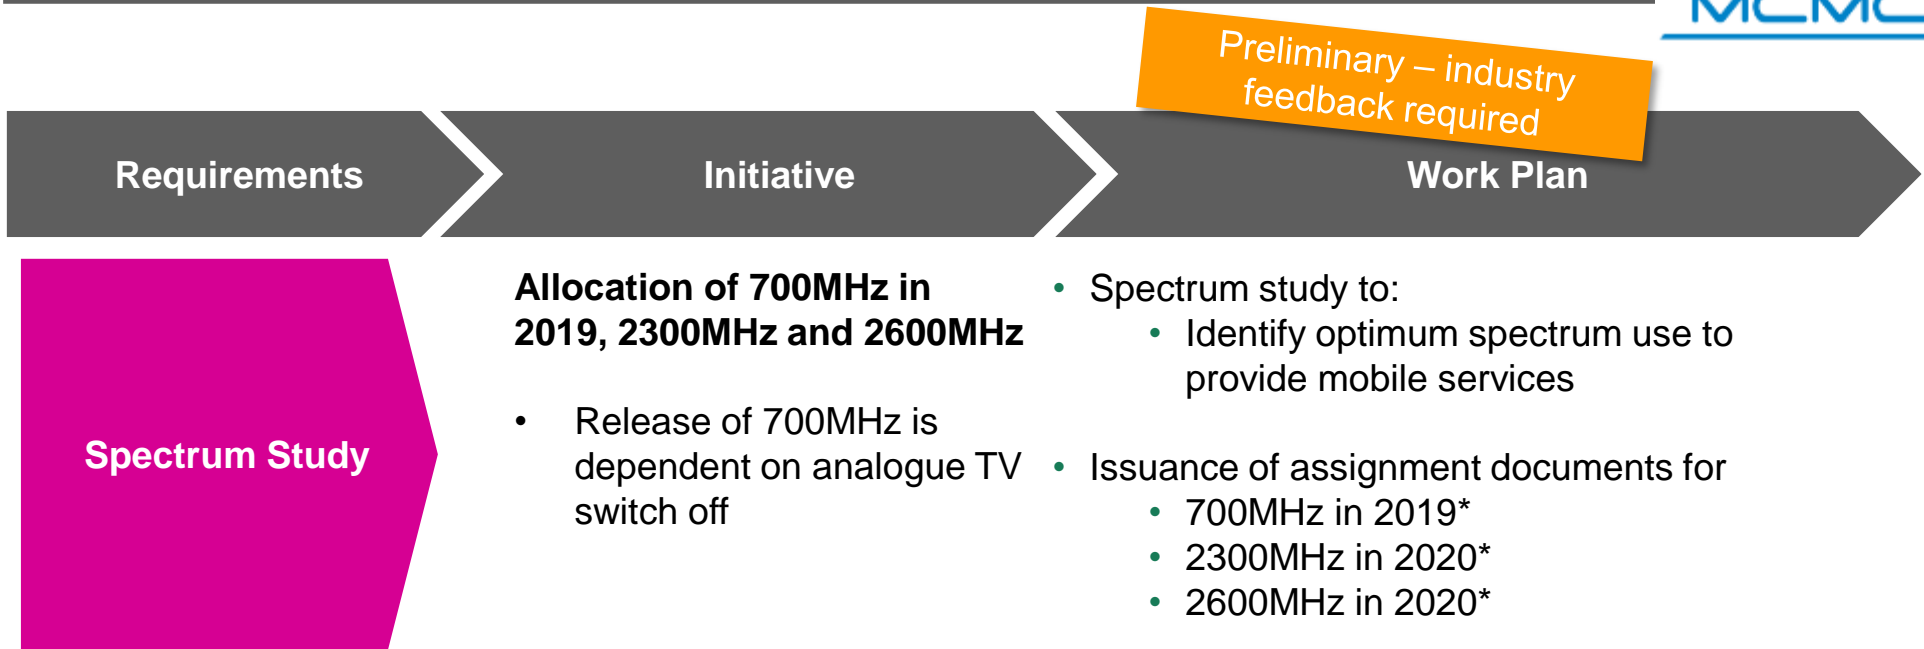

Different stakeholders' requirements and expectations	Approach	Proposed Solution
MCMC <ul style="list-style-type: none"> Implementation of UBBL to increase fibre-ready homes Speedy and cost-effective fibre rollout to improve backhaul and access Accessible data for reporting, consultation and management 	1 <i>Eliminate middlemen, reduce bureaucracy and increase roll-out speeds</i>	<ul style="list-style-type: none"> <i>Moratorium on approval for communications infrastructure to facilitate deployment</i> <i>Submissions may still be required, but may be time-based, or given "Permitted Status"</i>
Industry <ul style="list-style-type: none"> Transparent process for ease of deployment Speedy and cost-effective fibre deployment to recover investments and meet targets 	2 <i>Address concerns on potential nuisance, damage and delay</i>	<ul style="list-style-type: none"> <i>"Industry pledge"* on commitment to address the concerns</i> <i>Industry-based escrow deposit to be used to pay penalties for installations that cause damage etc</i> <i>Roll-out coordination, infrastructure sharing and improved access to ducts to reduce risks and roll-out cost</i>
Authorities <ul style="list-style-type: none"> Cities may be competitive in the future, but there are immediate concerns Roll-out may create nuisance, damage and uncertainty to the public, property and authorities Cost needed to monitor and ensure works are planned and done in a satisfactory manner 	3 <i>Address planning, cost and UBBL areas</i>	<ul style="list-style-type: none"> <i>Improve data submission to MCMC to streamline rollout, reduce damage to comms infra, etc</i> <i>Develop Code/Standard/Process to implement UBBL – to ensure installation based on standards etc</i> <i>Transparent charges based on rule of law – fees/charges must be sanctioned/codified</i>

*can also be Undertaking if these were taken up as voluntary codes

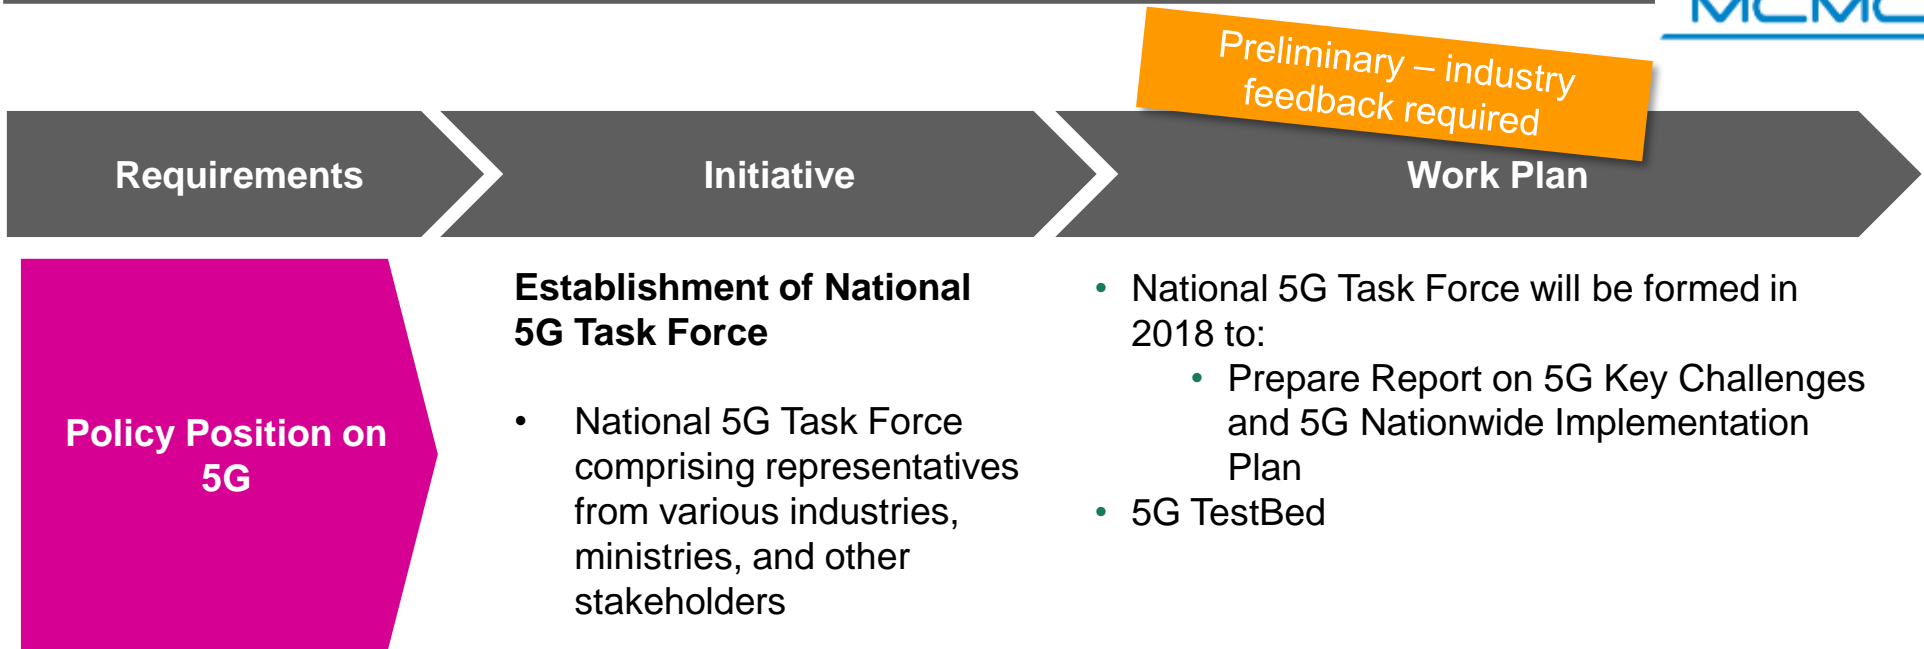

Targets A3, A4 (7/15)

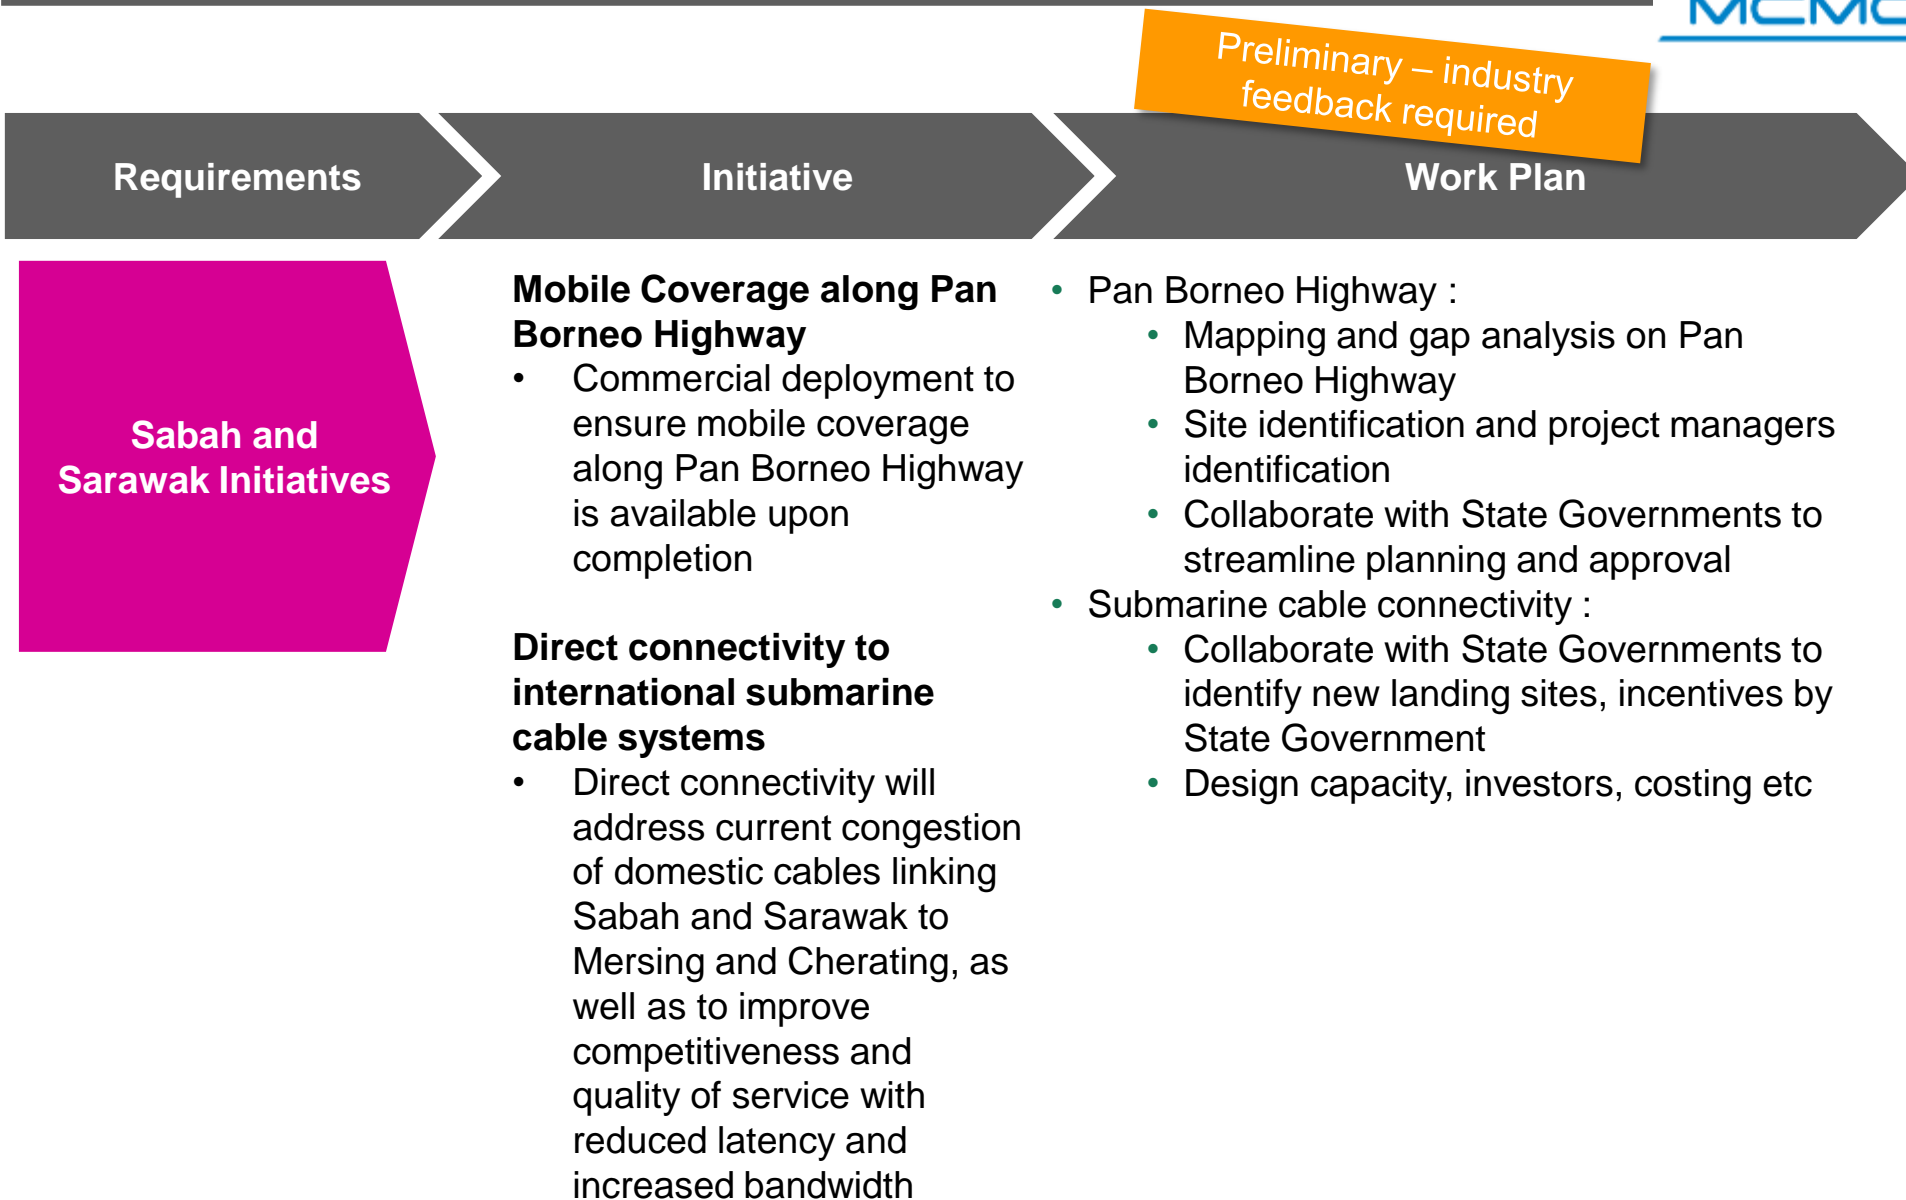

Target A1, A8, A11, B14 (8/15)

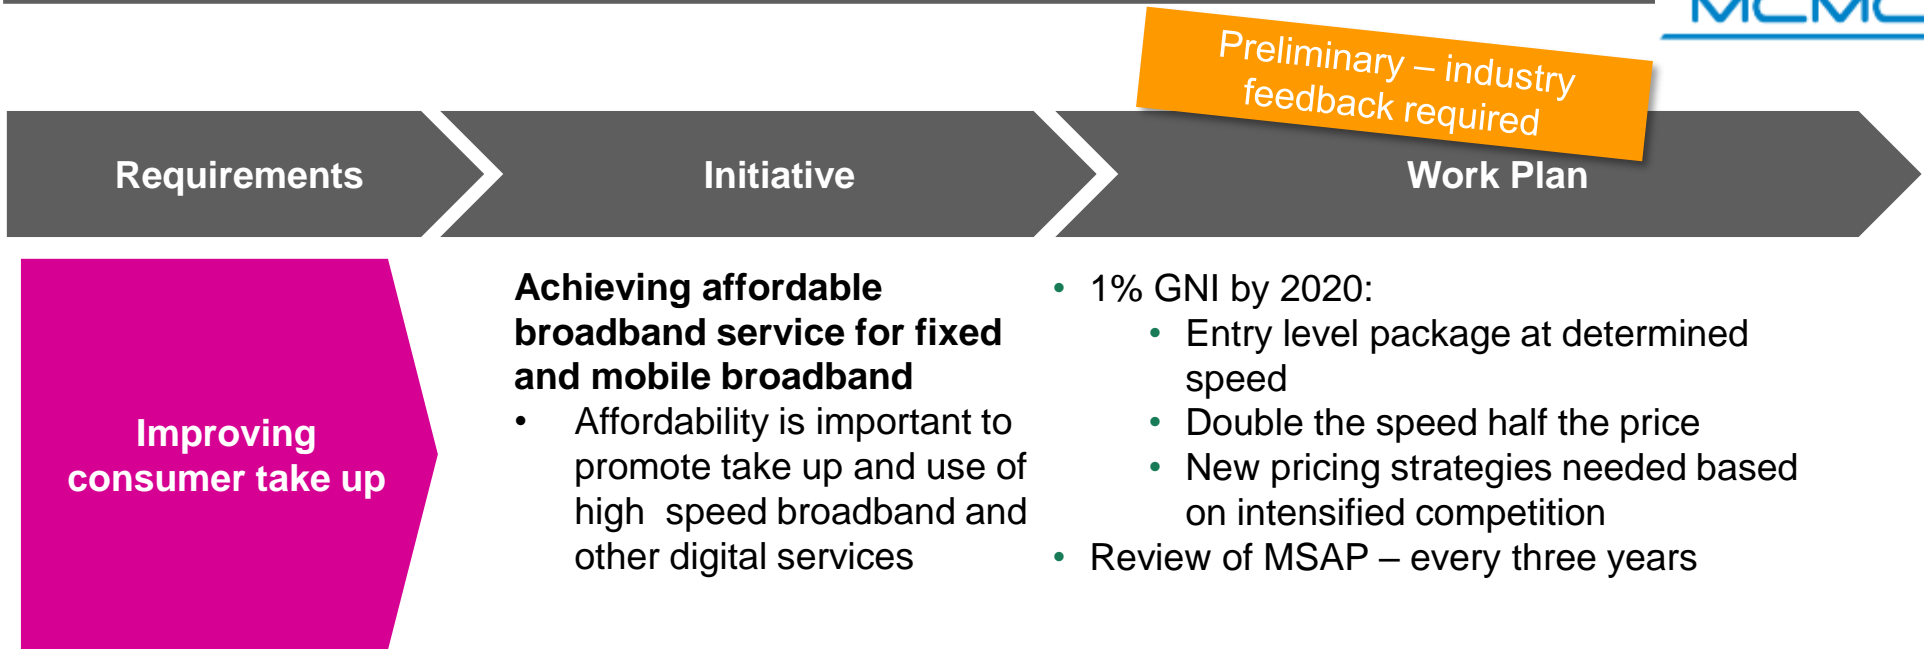

Targets A11 (9/15)

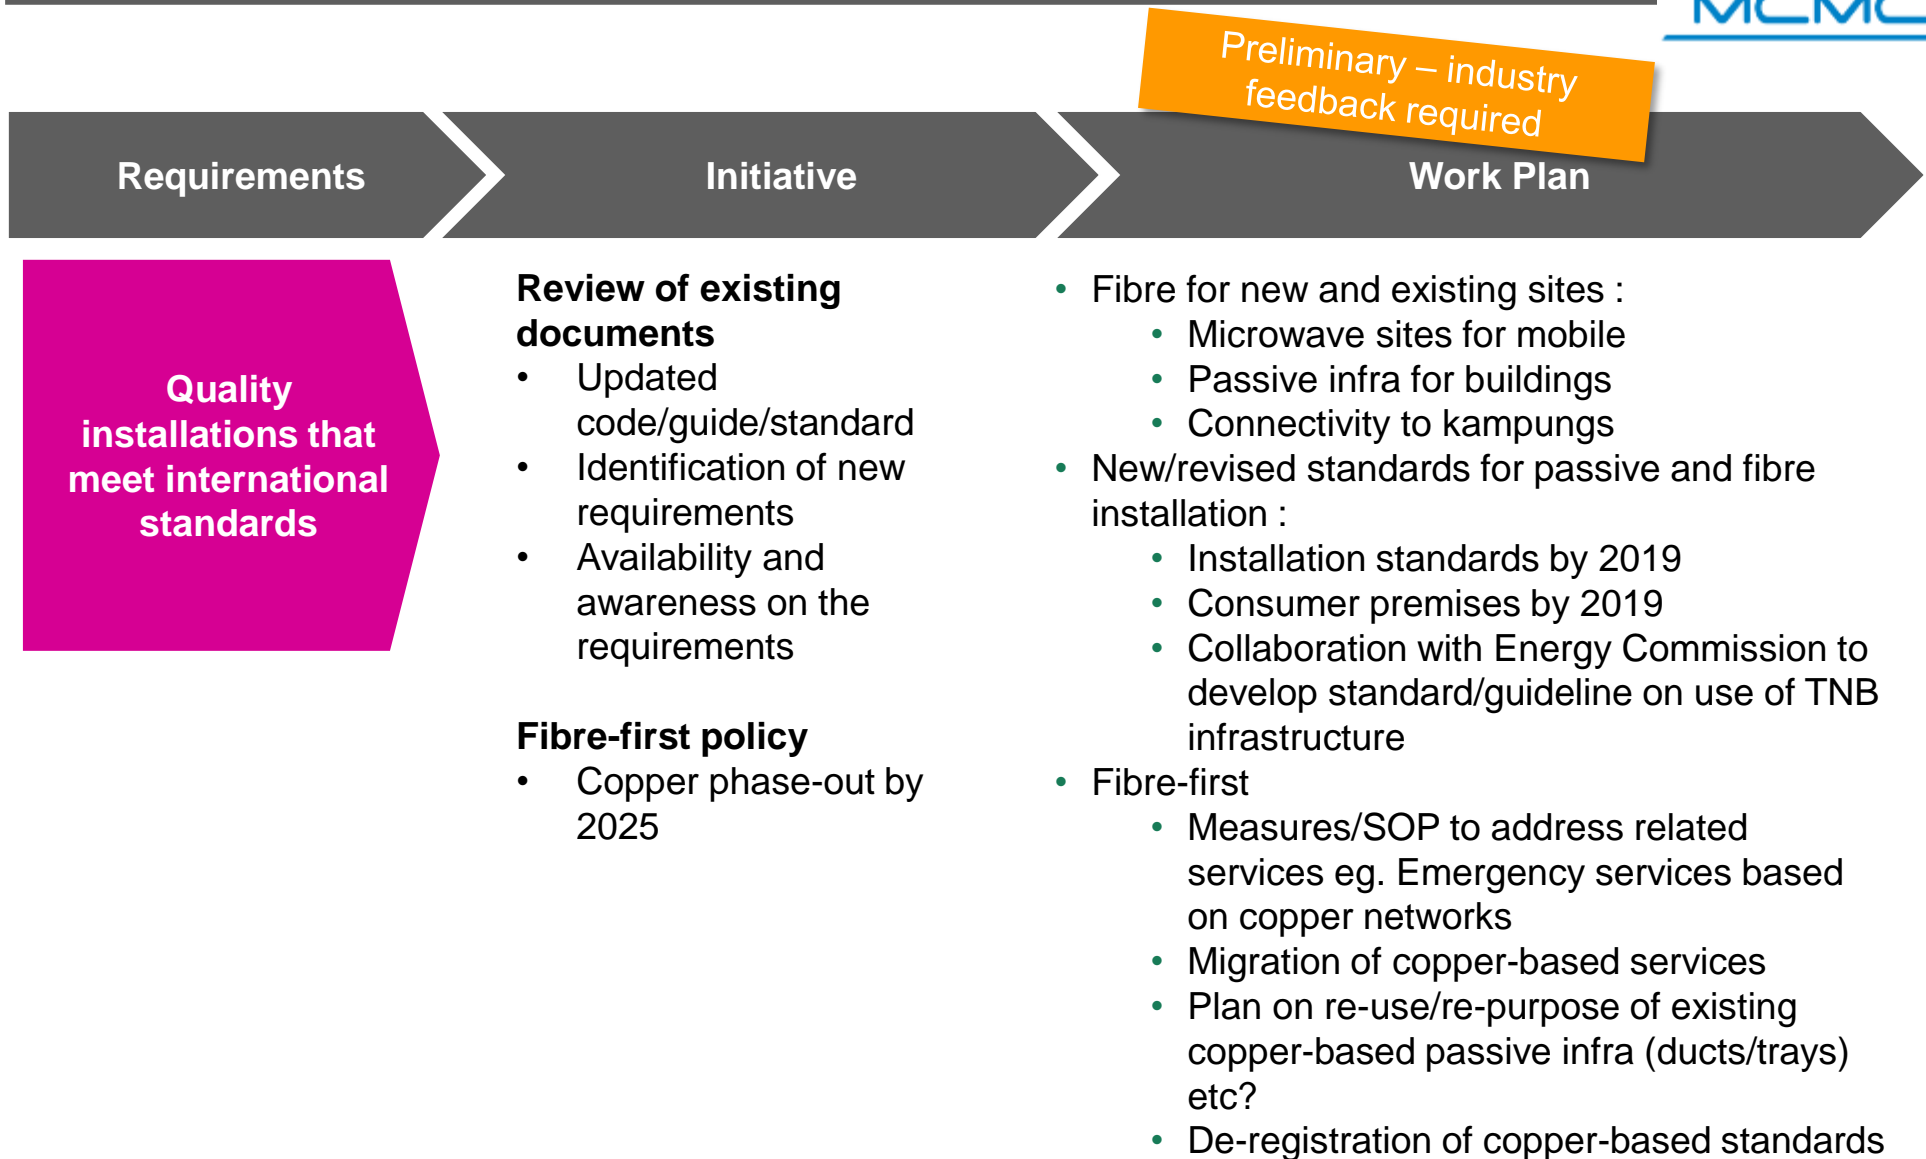

Targets A9, A10 (10/15)

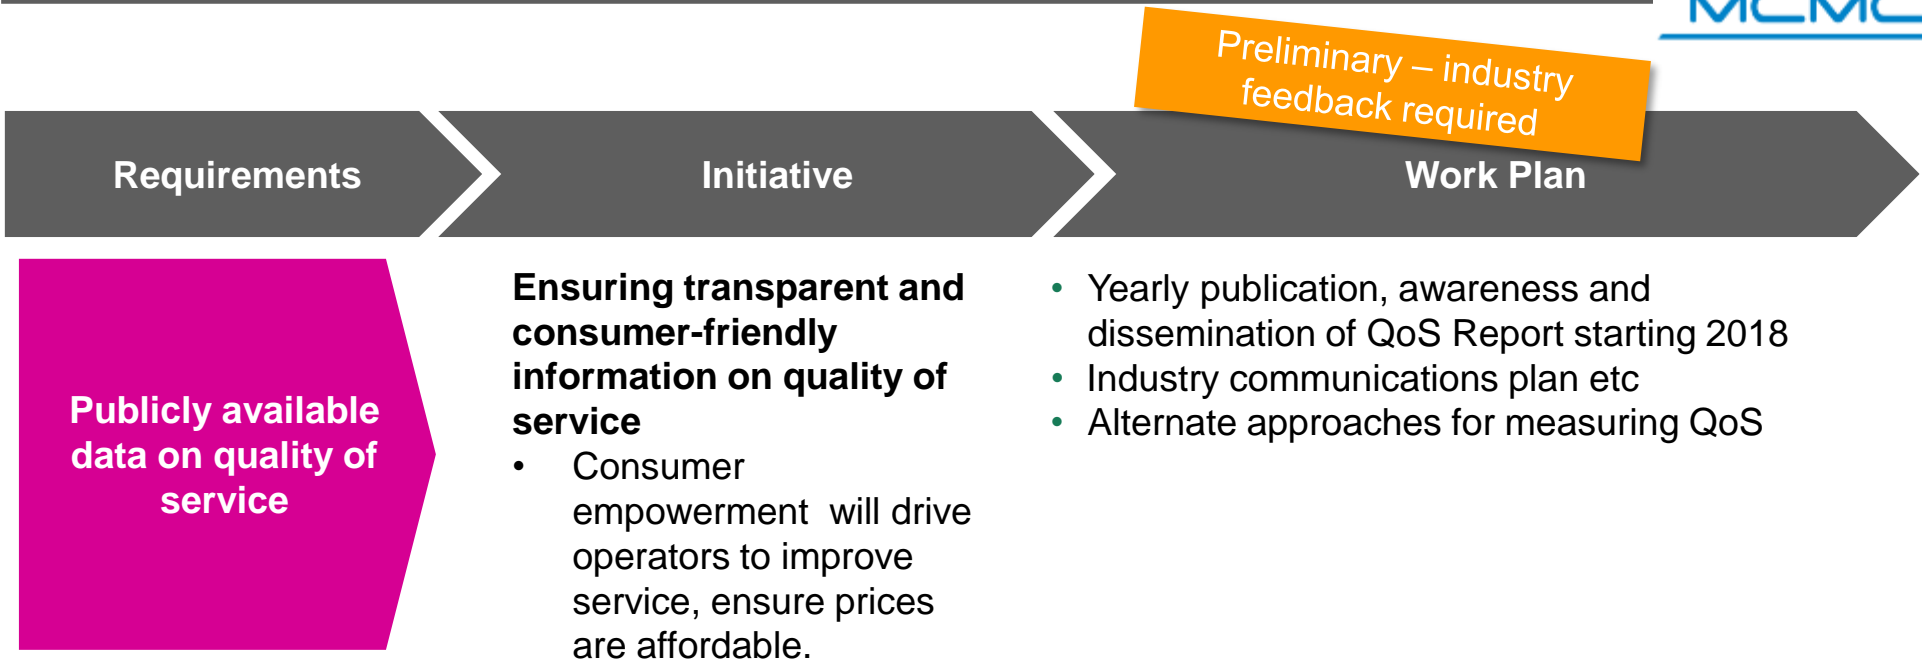

Targets B12, B13 (11/15)

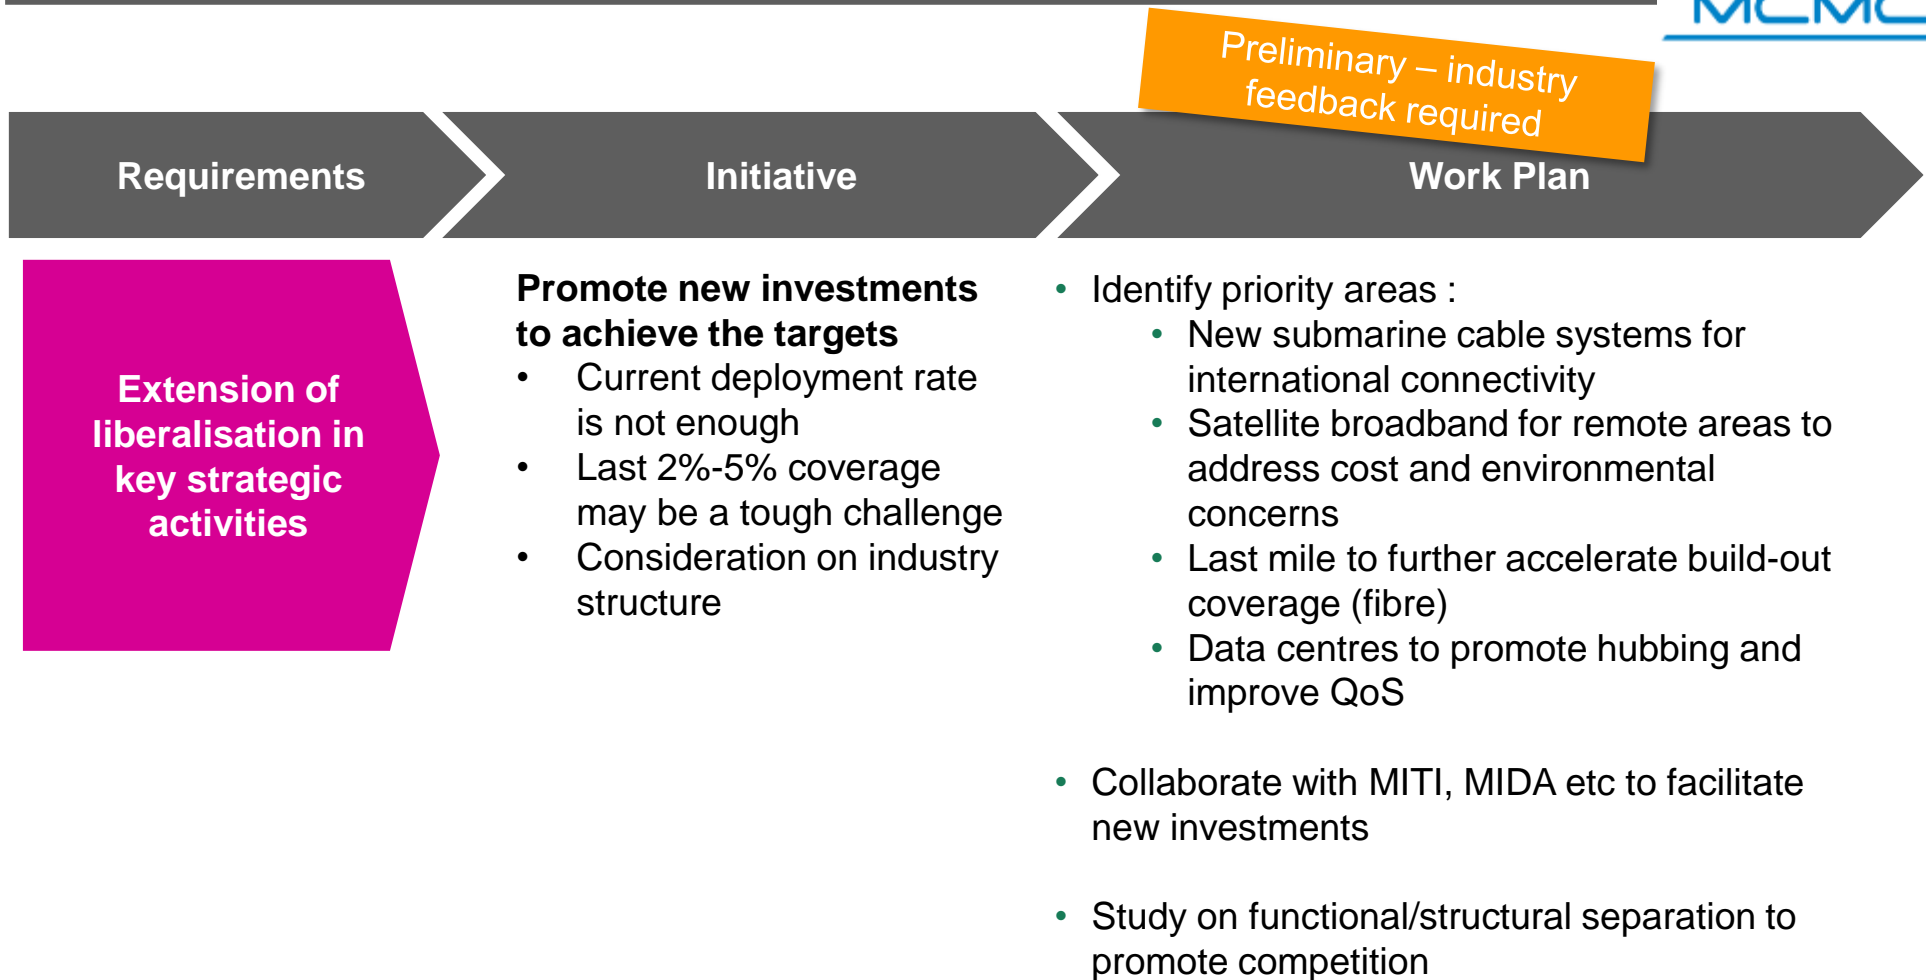

Target A6, A7, B14 (12/15)

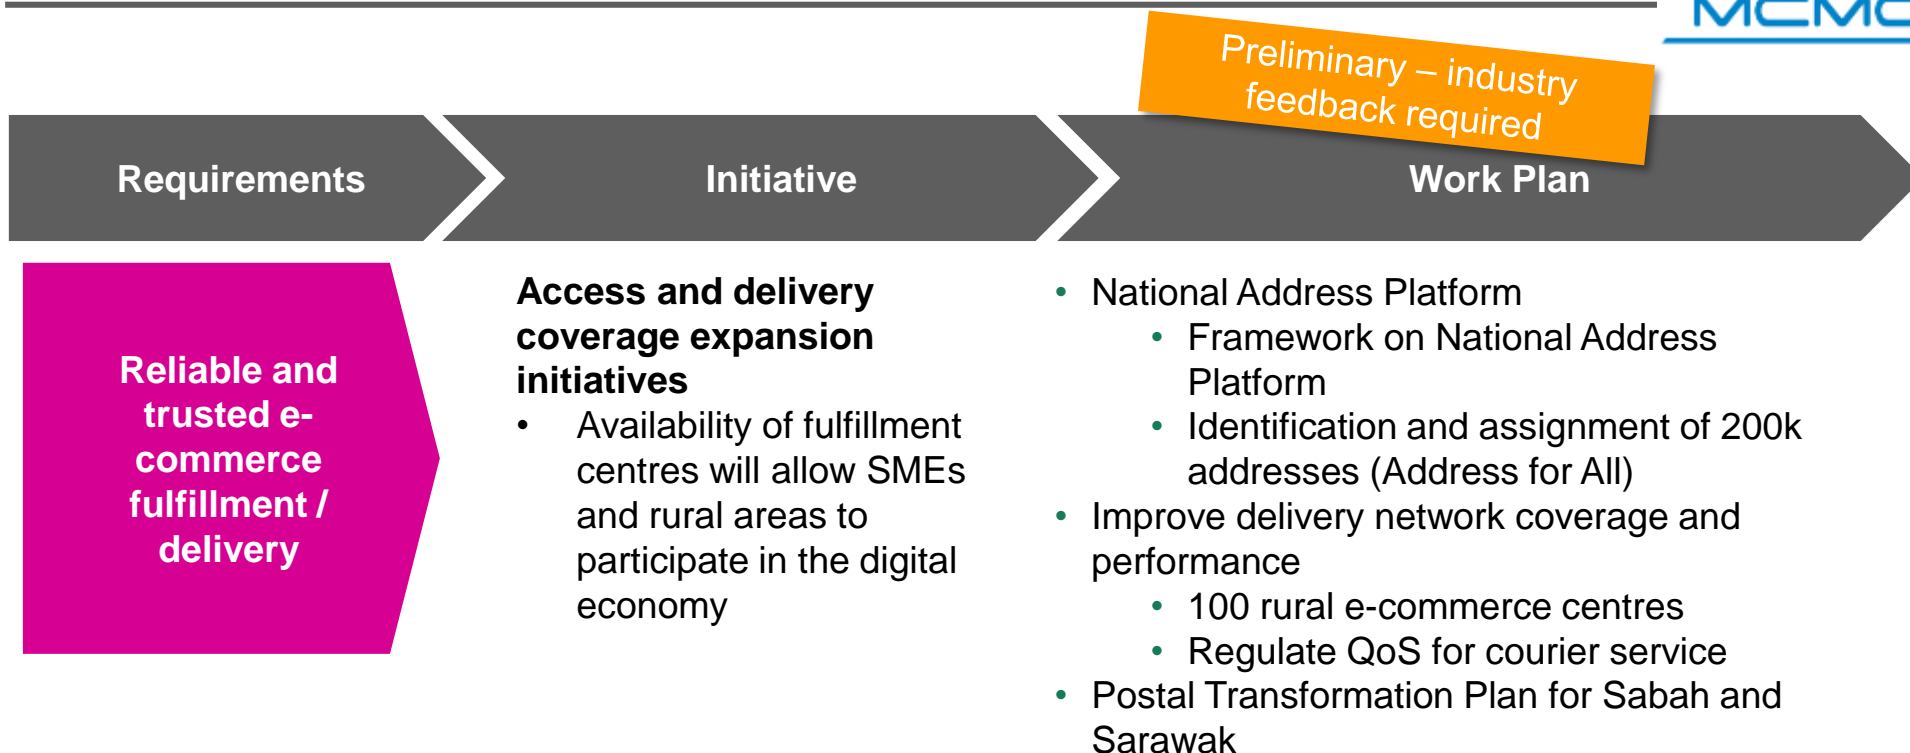

Target B14 (13/15)

Target C15 (14/15)

Recent amendment to the Street, Drainage and Building Act 1974 – time to improve our industry's SOP

Denda 100 kali ganda gagal baiki jalan

Oleh Lugman Arif Abdul Karim
cnews@nsp.com.my

KUALA LUMPUR: Kontraktor yang gagal membaiki dengan sempurna sebarang kerja pengorekan jalan awam bakal berdepan hukuman denda sehingga RM100,000.

Peningkatan denda sebanyak 100 kali ganda menerusi pembentangan Rang Undang-Undang (RUU) bagi meminda Akta Jalan, Parit dan Bangunan 1974 akan selepas dibahas oleh 18 ahli Parlimen dan dibacakan kali ketiga di hadapan Yang Dipertua Dewan Rakyat, Datuk Mohamad Ariff Md Yusoff serta mendapat sokongan sebulat suara.

Pindaan lain turut mencakupi peningkatan denda minimum daripada RM500 kepada RM50,000 bagi kesalahan mengambil tempat turap tanpa mendapat kebenaran bertulis daripada pihak berkuasa tempatan (PBT) atau agensi penguat kuasa yang sah di sisi undang-undang.

Menteri Perumahan dan Kerajaan Tempatan, Zuraida Kamaruddin, berkata usaha memperkukuhkan akta itu mendapat sokongan daripada kerajaan negeri, sama ada ditadbir pembangkang atau kerajaan, yang bersetuju mengangkat pindaan berkenaan seiring usaha memartabat kualiti jalan demi manfaat pengguna.

"Peruntukan kos bagi melaksanakan kajian geoteknikal dan siasatan berkala, seperti diperuntukkan dalam pindaan akta ini pula akan ditanggung pemaju, bukan PBT seperti mana dibimbangi segelintir pihak.

"Pegawai yang akan mengendalikan kajian dan siasatan berkala itu pula bukan dari PBT, sebaliknya perlu dilakukan pemaju serta disahkan jurutera bertauliah yang bebas," katanya ketika menggulung pembentangan RUU berkenaan, di Dewan Rakyat, hari ini.

Terdahulu, Zuraida ketika membentangkan RUU berkenaan bagi bacaan kali kedua berkata, cadangan menaikkan kadar denda itu dibuat selepas mendapati denda sedia ada sebanyak RM1,000 dilihat tidak berkesan sebagai langkah pencegahan.

"Banyak aduan berkenaan pengorekan, kerosakan dan kualiti pembaikan jalan, antaranya berpunca daripada kerja penyelenggaraan jalan oleh individu atau syarikat utiliti tanpa kelulusan PBT," katanya.

Selain jalan awam, Zuraida berkata denda itu akan terpakai bagi kesalahan merosakkan siar kaki, harta kepunyaan PBT, kaki lima atau di sepanjang laluan yang berhak digunakan orang awam.

Katanya, pindaan terhadap Seksyen 39 akta berkenaan membabitkan cadangan menaikkan denda minimum RM500 sedia ada kepada RM50,000 bagi kesalahan mengambil tempat turap tanpa mendapat kebenaran bertulis daripada PBT atau kuasa

"Pindaan lain turut mencakupi peningkatan denda minimum daripada RM500 kepada RM50,000 bagi kesalahan mengambil tempat turap tanpa mendapat kebenaran bertulis daripada pihak berkuasa tempatan (PBT) atau agensi penguat kuasa yang sah di sisi undang-undang."

"Banyak aduan berkenaan pengorekan, kerosakan dan kualiti pembaikan jalan, antaranya berpunca daripada kerja penyelenggaraan jalan oleh individu atau syarikat utiliti tanpa kelulusan PBT," katanya.

Ensuring Balanced Urban-Rural Growth

Definisi Bandar :

Kawasan yang diwartakan serta kawasan tepu bina yang bersempadan dengannya dan gabungan kedua-dua kawasan ini mempunyai penduduk 10,000 orang atau lebih; atau *kawasan pembangunan khusus; atau pusat pentadbiran daerah walaupun penduduk kurang daripada 10,000 orang dan sekurang-kurangnya 60% penduduknya berumur 15 tahun dan ke atas terlibat dalam aktiviti bukan pertanian.

Coordinating planning for the future

DASAR PERBANDARAN NEGARA KE 2 (2016-2025)

Rajah 5.15: Pelan Hierarki Bandar Negeri Johor

OBJEKTIF 3.3 : Penyediaan Sistem Komunikasi Yang Cepak Dan Efektif

STRATEGI 3.3.1 : Peningkatan sistem komunikasi di semua bandar

TINDAKAN 3.3.1.1 : Menyediakan jalur lebar berkelajuan tinggi (high speed broadband) di kawasan bandar secara menyeluruh pada kadar yang kompetitif (perincian daripada DPN 2006)

Justifikasi: Fasilitasi perdagangan dan kualiti perkhidmatan logistik menyumbang kepada kemajuan bandar yang lebih berdaya saing iaitu membantu menyusun aktiviti ekonomi yang lebih padat, terurus dan terhubung baik (well-connected).

AGENSII PEMANTAU : KKM

AGENSII PELAKSANA : PBT, SKMM

AGENSII SOKONGAN : Syarikat Perkhidmatan Komunikasi, MDEC

Indikator Pemantauan (Di Peringkat Bandar) : Purata kadar perkhidmatan internet dan jalur lebar berkelajuan tinggi

Penilaian Pencapaian

>8.4 Mbps	Amat Memuaskan
5.5 - 8.4 Mbps	Memuaskan
<5.5 Mbps	Kurang Memuaskan

Pemakaian Tindakan Mengikut Hierarki Bandar

Are multiple operators good for competition?

2.7.1. Infrastructure competition

Where properly implemented, FTTP deployment has usually led to an increase in network competition. It has allowed both existing alternative operators (by using incumbents' ducts) and new entrants (using their own ducts) to engage in infrastructure competition with the incumbent telecommunications and cable operators.

Table 1. Evolution of Network Competition across Countries

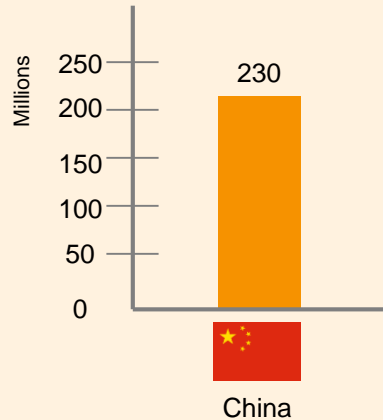

Country	Customers with Access to Competing Fixed Broadband Networks (% households)					
	2005			2017		
	1 network	2 networks	3 or more	1 network	2 networks	3 or more
Spain	52%	48%		42%	23%	38%
New Zealand	100%			69%	31%	
Sweden	62%	38%		39%	25%	36%
France	61%	29%		61%	11%	18%
Australia	90%	10%		100%		
Germany	37%	63%		32%	59%	8%

Source: Telegeography, except NERA estimates for Germany (2017) based on Breitbandatlas data; France (2017), based on ARCEP data; and Sweden (2017) based on European Commission data.

Malaysia is falling behind in fibre subscription

Total FTTH/B Subscribers by country

While China has increased its fibre subscribers and is still the leading country...

...countries like Japan and South Korea also have more than 30 or 10 million FTTH/B subscribers...

...and it can be observed 8 countries that already passed 1 million of FTTH/B subscribers

Source: IDATE for FTTH Council APAC

As well as in fibre coverage

Total FTTH/B Homes Passed by country

The Top-4: China is N° 1 by far due to the size of its market. Even though, countries like Japan, South Korea and Indonesia have reached 50 or more than 10 million homes passed with FTTH/B networks

Also it can be observed 10 countries that have deployed FTTH/B networks passing more than 1 million homes

Source: IDATE for FTTH Council APAC

Achieving 100% fixed coverage – a pipe dream?

How long does it take to have 100% fixed coverage in Malaysia?

Fi Permit Dan Proses Permohonan Infrastruktur Komunikasi

Fi & Caj

- Fi permit yang dikenakan oleh pihak OSA & PBT tidak selaras
- Pelbagai bentuk caj yang dikenakan oleh agensi di peringkat Negeri dan Persekutuan seperti caj OSA, caj permit dan lesen perniagaan PBT, wang sumbangan dan wang amanah kepada Kerajaan Negeri, wang deposit JKR, cukai taksiran dan caj permit khas tanah pertanian PTG, yuran audit, dan lain-lain.

Proses Permit

- Proses dan kaedah permohonan permit yang berbeza mengikut keperluan pihak PBT dan Kerajaan Negeri
- Proses kelulusan permohonan pembangunan infrastruktur komunikasi yang panjang (6-12 bulan) terutamanya melibatkan pertukaran syarat nyata tanah dan Kebenaran Merancang.

Proses yang panjang serta pelbagai fi dan caj yang dikenakan menyebabkan kerja-kerja pelaksanaan infrastruktur komunikasi sukar disiapkan dalam tempoh yang telah ditetapkan

Jenis Fi Permit Dan Caj Yang dikenakan Dalam Proses Permohonan Infrastruktur Komunikasi

CAJ TAHUN PERTAMA

One Stop Agency (OSA) – Permohonan melalui OSA

- Kecuali P.Pinang

One Stop Centre (OSC) – Permohonan kepada OSC

- Semua PBT kecuali Sabah

Pihak Berkuasa Tempatan (PBT)

- Wang Deposit (K. Lumpur, Putrajaya, Perak,)
- Wang Amanah dan Wang Sumbangan (Johor)
- Lesen Perniagaan (N. Sembilan)

Pejabat Tanah Galian (PTG)

- Cukai Taksiran (Kelantan)
- Deposit Tanah Pertanian (Perak)
- Permit Khas Tanah Pertanian (Johor, Melaka, N. Sembilan, Perak)

Kerajaan Negeri (KN) – Sumbangan Khas

- Pahang

OSA – Pembaharuan permit

- Semua negeri kecuali Pulau Pinang & Melaka

PBT – pembaharuan permit struktur telekomunikasi

- Semua negeri kecuali Sabah

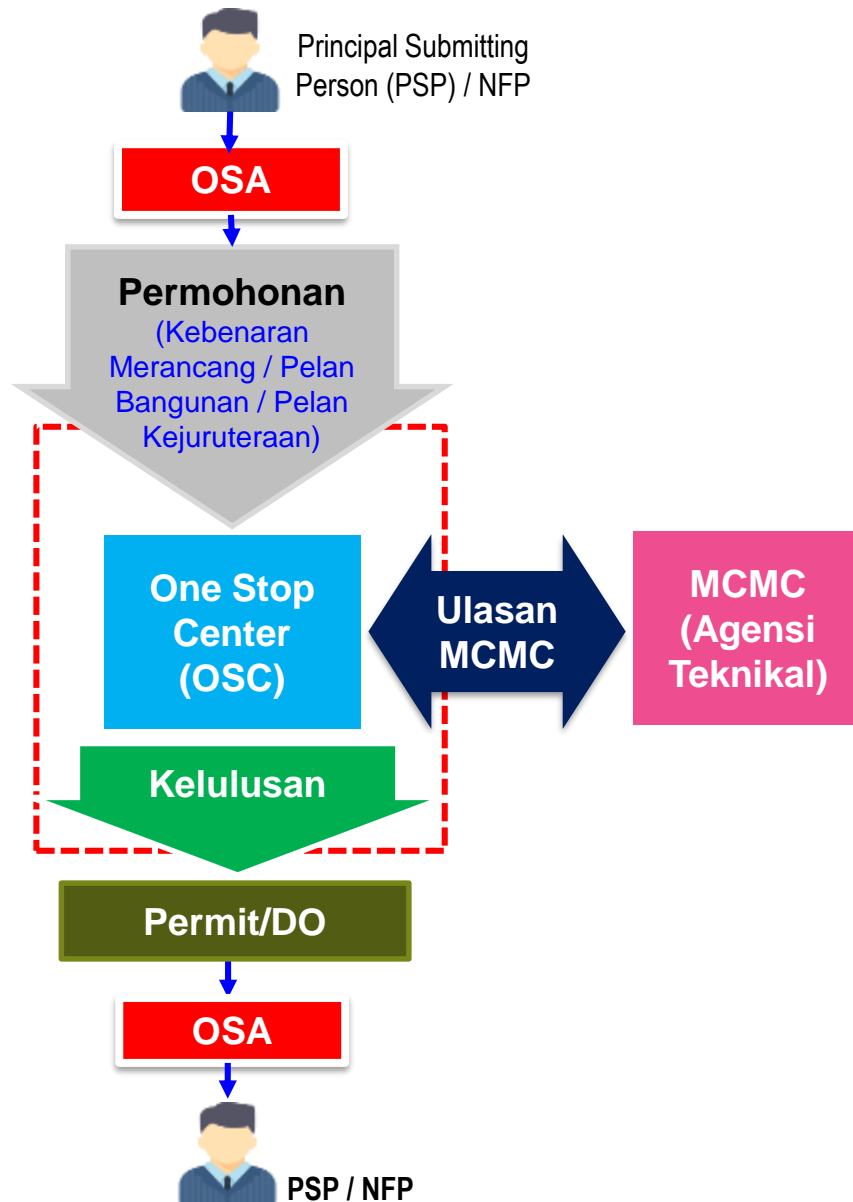

PTG

- Cukai Taksiran (Kelantan, N.Sembilan)
- Permit Khas Tanah Pertanian (Johor, Melaka, Perak, N.Sembilan)

CAJ TAHUN BERIKUTNYA

Proses Permohonan Permit

Dengan OSA

Tanpa OSA

Increase in deposit fees by JKR

- Mulai 1 Jan 2017, pihak JKR telah menguatkuasakan prosedur permohonan serta kadar wang cagaran yang baharu bagi kerja korekan jalan oleh pihak utiliti
- Kadar tersebut menyebabkan semua syarikat utiliti khususnya pihak Telco berdepan dengan peningkatan kos yang mendadak dalam projek *fiberisation* termasuklah projek MCMC sendiri

Jenis Kerja	Kadar 2016	Kadar 2017	Pindaan Jun 2017
Horizontal Directional Drilling (HDD)	RM50/m	RM6,500/m	Tiada perubahan
Potong bahu jalan (tidak berturap)	RM30/m	RM800/m RM5,000 (min)	RM400/m
Potong permukaan jalan berturap / Micro Trenching	RM30/m	RM8,000/m RM10,000 (min)	Tiada perubahan
Excavation Pit	RM1,000/pit	RM25,000/pit	Tiada perubahan

The Digital Agenda for Europe 2010 was updated in 2016 to create a Europe-wide Gigabit Society

Digital Agenda 2010's targets for 2020

The Digital Agenda for Europe (DAE) targets in relation to access networks are in three parts

Inclusion-related

- **Access to 2Mbit/s for all by 2013:**
 - largely a solved problem in Western Europe using ADSL, cable modem, occasionally FWA and satellite broadband to fill in the gaps
 - satellite tends to be expensive and has quality issues with long latency
 - allows use of low-cost Internet channels for public services
- **Access to 30Mbit/s for all by 2020:**
 - will take ingenuity and money
 - whether the value of 30Mbit/s is materially higher than a real 10Mbit/s is very debatable

Innovation / sustainability-related?

- **Take-up of 100Mbit/s by 50% of households by 2020:**
 - policy justification frankly weak – why 100Mbit/s? Why 50%?
 - much more than an access network issue – needs applications that need 100Mbit/s too

2000756-424

http://www.analysysmason.com/contentassets/c982e4d754944d6a7130fc907925380/4_presentation_james_allen.pdf

Gigabit Society's 2025 targets

Broadband Policy Update The Commission's proposal

3 strategic connectivity objectives for 2025

1. All main socio-economic drivers should have access to extremely high - gigabit - connectivity
2. All urban areas and major roads and railways should have uninterrupted 5G coverage and 5G should be commercially available in at least one major city in each EU Member State by 2020
3. All European households, rural or urban, should have access to connectivity offering a download speed of at least 100 Mbps

- Total funding need estimated € 500 billion.
- Investment gap of € 155 billion over 10 years.
- **Solutions:** combining increasing grants and financial instruments.
- **Solutions:** blending funding sources for European projects of common interest
- **Solutions:** adequate ESIF support, possibly with a significant envelope earmarked for broadband within EAFRD

https://atenekom.eu/wp-content/uploads/2017/11/02_GW17_EU-Commission-policy-update_FerreroF.pdf

List of existing technical documents – guidelines, standards etc – to assess relevance and requirements

JTM Documents

- General framework on road openings for telecommunications trenching, 1 March 1997
- REG-R 002 Regulatory framework on the sharing of radiocommunications infrastructure 1998 (could have been subsumed under TSIR RNI)

MCMC/MTSFB documents

- Technical Standard and Infrastructure Requirements (TSIR) - Fixed Network Infrastructure (Part 1) (2008)
- Technical Standard and Infrastructure Requirements: Fixed Network Infrastructure for Simple Development Properties (2016)
- Technical Standards of In-Building Fibre Cabling for Fibre-to-the-Premise (First Revision) (2016)
- Technical Code of Practice for the Installation of Network (2014)
- Radiocommunications Network Facilities – In-Building (2017)
- Radiocommunications Network Facilities – Smart Pole (2017)
- Technical Standards and Infrastructure Requirements : Radiocommunications Network Infrastructure (External) (Part 3) (2009)
- Guideline on the provision of basic civil works for communications infrastructure in development areas (2009)

KPKT/local authority documents

- Garispanduan menara dan struktur sistem pemancar komunikasi dalam kawasan pihak berkuasa tempatan 2002– propose to be revoked, along with other state guidelines and use TSIR Radiocomm. Approval processes to be subsumed under the revised Senarai Semak at OSC
- Senarai Semak – to identify and revise the documents required in line with abolishment of OSA
- Garispanduan tapak infra komunikasi (draf)
- Garispanduan Laluan Kemudahan utiliti
